## USERS BUY IN TO SOFTWARE RENTALS

IT labor shortage, cost savings drive interest

BY JULIA KIRO

Judging from the way both big-gun and small fry vendors are hurling their hats into the ring, the market for software rentals is about to explode.

For users, that could mean dramatically lower and more predictable costs, much faster access to new applications and far fewer administrative headaches. It also could help ease the impact of both the labor crunch and IT's preoccupation with the year 2000 problem — sometimes to the exclusion of other

technology needs.

"I think departmental and individual managers who are lining up for resources from IT and are being forced to wait are going to start turning to applications services providers and just renting what they want. This is already happening with hosted Web sites," said Phil Wainwright, editor of "ASP News Review," a newsletter based in London that has tracked the software rental market since last fall.

Last week, Microsoft Corp. confirmed that it will begin test rentals of its server-based products within the next six to 12 months. It's

Users rent software via the Internet or a private network and pay a monthly per-user or by-transaction fee

## RETAILER COMMITS TO LINUX IN 250 STORES

Burlington Coat a big win for shareware OS; user sees better price, performance than NT

BY DAVID GREENSTEIN

Burlington Coat Factory Warehouse Corp.'s plan to run its stores on Linux may make users give real consideration to the shareware Unix operating system.

But then, again, maybe not. After all, the retailer's infrastructure and culture are particularly well-suited to take it where many other companies fear to tread (see story, page 97).

The \$1 million-plus deployment at the \$1.8 billion

Burlington, N.J., discount store is the largest Linux retail installation announced by a U.S. company. "We're pumped," said CIO Mike Prince.

"We finally made the business decision, and all the developers cheered."

Over the next 12 to 18 months, Burlington will install Linux on 150 computers in its 250 stores. Prince said, "Linux has come along so strongly, and the price of Intel PCs has dropped so much ... [that it] is attractive from both

a price and performance standpoint. It's free, and it runs like the wind."

Prince said he also expects Linux to be less costly to support and maintain than NT, which he said is less stable.

## HITACHI SKYLINE COULD DOUBLE RIVALS' SPEEDS

BY JAYKUMAR VIJAYAN

Big iron is getting a lot bigger.

Pumping it up is mainframe maker Hitachi Data Systems Inc., which later this month will unveil a next-generation Skyline system that should offer roughly double the performance of its rivals' current top-of-the-line systems. Hitachi officials declined to comment.

The new Hitachi mainframe, called Triniton, will offer Hitachi, page 97

OWENS CORNING CIO David Johns wants reason to vote out the Microsoft case. The government should prohibit exclusivity licenses, he says.

## ANTITRUST AFTERMATH

**Y**ES, 18 WEEKS AFTER it began, the Microsoft antitrust trial is dragging on. But pay attention. If the government proves its case, the results could reshape the software industry

and change the way IT managers buy PC software. CIOs say they're leery of government regulation of the industry, but many would like to see pro-competitive contract changes and an official ruling that Microsoft is indeed a monopolist that must play by different rules. This week Computerworld senior editor Kim S. Nash looks ahead at how the historic trial could change the lives of IT buyers.

## EDS, MCI SWAP OUTSOURCING

Pact boosts E-commerce and expands services

BY STACY COLLETT

Customers of Electronic Data Systems Corp. will see expanded electronic business offerings as a result of its \$17 billion outsourcing swap last week with telecommunications giant MCI WorldCom Inc.

"We haven't grabbed a lot of space in the area of E-business, but we're working on it" through this deal, said Dick EDS and MCI, page 16

## J. D. Edwards Issues Warning

J. D. Edwards & Co. is the latest enterprise resource planning vendor to feel the squeeze of lower-than-expected revenues. The Denver-based company said it expects revenue for its quarter ended Jan. 31 to be below estimates in part because users were lousy on year 2000 firms.

## Short Takes

PLATINUM SOFTWARE CORP., an application vendor in Irvine, Calif., has agreed to change its name this year to outfit a suit filed by Platinum Technology Inc. in Oakland, Texas. ... Hewlett-Packard Co. and IBM plan to upgrade most of their corporate desktop PCs with Pentium III processors when the Intel Corp. chip is available Feb. 26.

## UTILITY PLUGS IN CUSTOMER SYSTEM

## Pacific Gas responds to deregulation

BY JULIA KING

IF THE THIRD TIME around is truly a charm, Pacific Gas & Electric Co. (PG&E) will have a new customer information system serving all of its 13 million customers by early 2002.

After starting and scrapping two different projects to build a proprietary customer information system (CIS), the San Francisco-based utility now is implementing SPL Worldgroup Inc.'s CIS Plus software. The 300-person project valued at more than \$20 million, will be executed in several phases, the first of which carries a July deadline.

Under California's deregulation rules, that's the date by which PG&E must begin to calculate new rates for electricity that may be generated

by competitors but is still transmitted and billed to customers by PG&E.

PG&E's plan is to convert customers to the new system in chunks, beginning with large industrial and commercial customers and ending with residential customers.

"This will give us time to work without taking on huge numbers all at once. Eventually, we'll use the new CIS software for all customers but work out any bugs before reaching the residential market," said Damien Brooks, the utility's CIS manager.

UtiliCorp United Inc. in Kansas City, Mo., another SPL Worldgroup user, whose proj-

DAMIEN BROOKS: We'll use the new CIS software for all customers

ect began 18 months ago, also has used a phased approach. So far, it has migrated about 800,000 of its more than 1 million customers to the new system, according to Julian Brandes, executive vice president of San Francisco-based SPL's global consulting practice.

PG&E's CIS project follows two abandoned efforts to build its own in-house system, first in conjunction with Andersen Consulting and later with IBM. In both cases, the technology under development wouldn't have supported the billing capabilities PG&E must have to operate in a deregulated environment, Brooks said.

"This is hopefully the final evolution of that story," he said.

## Service Merchandise to Shut 134 Stores, Lay Off IT Staffers

## May business plan outlines cost savings

BY STACY COLLETT

Information technology staff layoffs are inevitable at Service Merchandise Co., a catalog showroom chain that plans to close 134 stores during the next three to four months.

"I expect we'll be downsizing after stores close, but I don't know by how much at this stage," said Ken Braine, senior vice president and CIO. Service Merchandise's IT department employs 272 full-time workers.

The job cuts couldn't come at a worse time. Industry watchers said major IT projects are critical to Service Merchandise's metamorphosis from a catalog showroom to a more conventional retail store.

"Those systems have to be

re-engineered, or there is no business. The trick now is money is limited. Also, this is the time when you really can't afford to lose your best people. You need top-flight business analysts and project leaders," said Brian Hume, president of retail consulting firm Martec International Inc. in Atlanta.

Service Merchandise is scheduled to release a business plan in mid-May that will outline staff cuts and other cost-saving measures.

Service Merchandise sales have been on a downward slide for more than a year. The company closed 60 stores and shut down its catalog showroom business in 1997. It reported a \$38 million net loss for its third quarter last year, compared with a \$25 million loss for the same period in 1997.

Braine insists the company's four main IT projects, many of which promise one-year re-

turns on investment, will continue, but a few smaller projects likely will be killed.

Service Merchandise, based in Brentwood, Tenn., is rolling out an in-house system that handles register-related functions and handheld technology for taking inventory.

## Ongoing Projects

The rollout should be completed at the 213 remaining stores by May. The company also is implementing an "assortment planning" system from MarketMax Inc. in Danvers, Mass., that determines what products will be sold in each store.

Service Merchandise is reviewing vendors for a new warehouse management system, which is scheduled to be implemented in April 2000. The company also will continue to enhance its Web site ([www.servicemerchandise.com](http://www.servicemerchandise.com)), which offers direct sales.

One project likely to be canceled is a gift-certificable payment system for mail-order transactions. Other projects will follow on investment with low return.

Yet David Cain, manager of customer care and billing at the Electric Power Research Institute's Customer Systems Group, a consultancy in Palo Alto, Calif., said he isn't a sure.

"The interesting thing about deregulation and competition is that you can focus on one and forget about the other. The near-term objective of many utilities is to meet a date to get into compliance with regulatory rules, but the potential danger is forgetting about the competition," Cain said.

Cain said he believes that SPL's software will indeed enable PG&E to meet its regulatory requirements. But ultimately, all utilities will need customer systems that are even more flexible so they can easily be integrated with sales, marketing and other business systems, as well as the Internet. ■

## IBM Readies Selective Outsourcing

BY BOB WALLACE

Outsourcing powerhouse IBM Global Services next week will announce a program through which it will team with users' information technology departments to tackle and solve network and systems management problems. Although the vendor already provides outsourcing to users where it handles everything, its new "selective outsourcing" combines the power of user IT staffs with IBM Global Services experts.

The program is expected to cover IBM and other vendors' products managed by IBM systems. But IBM's Tivoli Systems Inc. network management unit will not initially be covered under the program, an IBM spokesman said.

The U.S. market for discrete network management and monitoring the service market is projected to grow from \$2.43 billion last year to \$4.69 billion in 2002, according to International Data Corp. in Framingham, Mass. That represents about an 18% average annual growth rate. ■

*Need to Back Up UNIX and Windows NT?*

# Backup Express: One Solution Across Platforms

*Flexible, Distributed Backup/Restore with Intuitive,  
Easy-to-Use Graphical Interface*

Many sites are faced with the dilemma of backing up lots of data on both of today's most popular network platforms, UNIX and Windows NT<sup>®</sup>. And that data is likely to be growing at the astonishing rate of 40% a year! How can you back up and restore all your UNIX and NT data fast with one easy-to-use graphical user interface?

#### Backup servers on UNIX or Windows NT

Built especially for today's multi-platform network environments, Backup Express lets you choose your strategy. You can concentrate your backup tape devices at one server, or you can distribute them throughout your network, connecting them to any UNIX, NT, or NetWare machine you choose. Yet administration is always centralized, and you can control all your backup and restore processing from any machine on your network with TCP/IP.

#### Distributing devices provides speed and flexibility

Because Backup Express allows you to connect storage devices to any machine on your network, you can minimize network traffic and break I/O bottlenecks. A distributed strategy also lets you increase concurrency and multi-tasking, so that overall processing time is

With the simple, intuitive Backup Express graphical user interface, you just drag-and-drop and point-and-click to schedule backups, run restores, add devices, or check job status.

reduced dramatically. In addition, distributing devices allows you to schedule backups with great flexibility. You can set up "lights out" backup easily, and restore data during the business day without fear of degrading network performance.

#### Need database backup?

For online backup, Backup Express provides native interfaces to SAP, Oracle's EBU and RMAN, M/S Exchange, and SQL. BackTrack. Fast offline database backup is also available.

**Backup Express is a single solution across platforms — fast, flexible, easy-to-use. You can arrange for a FREE trial of a full-production version of Backup Express. Just visit our web site at**

# SEC THREATENS ACTION ON SKIMPY Y2K FILINGS

Is agency's bark worse than its bite?

BY THOMAS HOFFMAN  
AND CRAIG STEWART

**T**HE SECURITIES AND Exchange Commission (SEC) last week said it's dissatisfied with the amount of information public companies are disclosing about their year 2000 costs and potential business liabilities. But the agency sent out mixed messages about whether it will take action against companies that aren't forthcoming.

On the one hand, Laura S. Unger, the commissioner in charge of the agency's year 2000 efforts, said the SEC is planning to start to take action against wayward companies, but she also said the agency hasn't yet identified any companies it plans to penalize.

For example, the SEC might step in if it discovered that a company's filings didn't include year 2000 information that was disclosed elsewhere, Unger said. "I can't speak for our enforcement division, but as a commissioner I would absolutely authorize [taking action on] something like that," she said.

The SEC is empowered to issue cease and desist orders or fine uncooperative companies \$5,000 to \$50,000, depending

upon the violations. Yet Unger said it's unlikely that the SEC would censure public companies or take direct actions against corporate officers.

That's despite an SEC review of year 2000 disclosures by 400 companies in last year's third quarter that revealed half had failed to outline how much they were spending on their projects. That maps with a recent Computerworld investigation that found most companies

were continuing to file skimpy disclosure statements (CW, Feb. 1). A separate SEC survey found that 1,200 companies failed to make any disclosures at all.

But the SEC's disclosure guidelines should be taken seriously. Even if the agency doesn't come down hard on companies that don't comply, those businesses could leave themselves open to lawsuits by disgruntled shareholders, the lawyers said.

"I don't think the SEC is going to go after companies in a formal sense," said Greg Cirillo, a partner in the Wash-

ington office of the law firm Williams, Mullen, Christian & Dobbins. "But [shareholder] suits are the bigger stick. And there's no way to read the SEC's guidelines and then not make a disclosure."

beginning to address that part of the puzzle.

I don't think the SEC is going to go after companies in a formal sense.

BREO CHILLO,  
WILLIAMS, MULLEN,

ington office of the law firm Williams, Mullen, Christian & Dobbins. "But [shareholder] suits are the bigger stick. And there's no way to read the SEC's guidelines and then not make a disclosure."

## Win 2000's Dirty Secret: Most Applications Must Be Rebuilt

Microsoft trying to ease migration

BY SHARON BAUGHN

The mostly new code in Windows 2000 makes it such a different beast than its NT 4.0 predecessor that corporate developers had better brace themselves. Most of their existing applications will have to be rebuilt, or at least revised, to make them compliant.

The issue isn't the stability of the current Windows 2000 beta. Even if the code in the final release of Windows 2000 is completely bug-free, many ap-

plications that run on NT 4.0 simply won't be able to use the new features, such as Active Directory or COM+, available in the upgraded operating system. "Eighty percent of the code in Windows 2000 is new," said Daniel Kannech, an analyst at International Data Corp. in Framingham, Mass. "If that's not a new operating system, I'm not sure what is. With the Windows platform, each migration from one version to the next has been tough. This will be tougher."

Of course, there also are bugs in the early release of the Windows 2000 Beta 3 code that are causing some applica-

tion incompatibility problems.

"That doesn't surprise me, with 25 million lines of new code," said Joe Olsits, an analyst at Forrester Research Inc. in Cambridge. "That's what betas are for. Fixing them might further delay an already late piece of software.... The trade-off, though, is going to be if Windows 2000 is worth all the trouble of messing with all those applications."

### New Features Are Problem

Karan Khanna, Microsoft's lead product manager for NT Server, explained that applications that run under NT 4.0 will run under Windows 2000 if they don't access the new features.

But if information technology managers want to take advantage of the reasons companies want to buy in to Windows 2000, such as public-key security and the new directory, then they will have to change those applications.

Khanna said Microsoft is trying to ease that workload by building some of the changes into the application programming interfaces (API) so developers can write to the APIs instead of building the coding into the applications.

But John Scannell, director of IT planning at Consolidated Edition of New York Inc., said he thinks his developers will

have a lot of work ahead of them. "That will be a big negative," Scannell said. "The thought of rewriting applications is not something a large company wants to deal with. If it's one or two applications, that would be one thing. I don't know how we'll deal with something bigger."

### JUST THE FACTS

## Code Monster

Windows 2000 has a burgeoning number of lines of code. "That will be a big negative," Scannell said. "The thought of rewriting applications is not something a large company wants to deal with. If it's one or two applications, that would be one thing. I don't know how we'll deal with something bigger."

Here's how it stacks up against other operating systems:  
NetWare: 5M to 10M lines  
Unix: 5M to 10M lines  
VMS: 30M lines  
Windows NT 4.0: 15M lines  
Windows 2000: 35M to 40M lines

## Microsoft Teases Knowledge Management

BY ROBERT PUSARO

Some details of Microsoft Corp.'s knowledge management strategy are starting to seep out. The company floated knowledge management trial balloons last year at its Exchange conference and at a technical conference in Europe that introduced elements of its strategy: collaboration, publishing, search, tracking, workflow and data analysis.

Sources close to Microsoft said it's developing a knowledge management architecture under the code-name Tahoe.

Based on Microsoft's Site Server 3.0, Tahoe will include document management and workflow features such as search capabilities, Extensible Markup Language (tagging and support, and document versioning.

The project also would include a "portal" component.

Analysts said Microsoft faces strong competitive pressure from IBM subsidiary Lotus Development Corp. to deliver on a knowledge management strategy. Rival Lotus has positioned its Lotus Notes and

Domino groupware as front-runners in this emerging market. Microsoft hasn't been able to deliver a strong knowledge management strategy, said Ovum Ltd. analyst Eric Woods, because it has been hamstringed by gaps among its disparate collaboration products such as Exchange Server, Site Server and Office Group.

Gartner Group Inc. analyst Tom Austin predicts Microsoft's first knowledge management products won't ship until the end of 2001 or middle of 2002.

Isaac Appelbaum, senior vice president at Concord, Calif.-based Concord Solutions, a subsidiary of Bank of America, said he will probably deal with it by devoting some developers to the task of bringing their custom applications into Windows 2000 compliance.

"It's going to be a bigger job than expected," he said. "I can tell you that we won't be an early adopter. When someone tells you there will be 80% new code, I can tell them we'll be on the careful side."

## Subaru in \$34M Outsourcing Pact

Subaru of America Inc. renewed its outsourcing contract with Infosys Corp. for five years in a deal worth \$34 million. Under the new contract, Subaru's data center, help desk and network operations center will be moved from a Subaru facility in Pleasanton, N.J., to Infosys' facility in Eagan, Minn.

## Free PCs, Net Access Offered - Ads Included

A California start-up is giving away 10,000 Compaq Computer Corp. Proxmire PCs packed with free Internet access, e-mail - and advertising based on respondents' answers to a survey. The ads are stored on hard drives and appear in a frame on the PC screen. Consumers last week jammed Free-PC Inc.'s Web site ([www.freepc.com](http://www.freepc.com)).

## Surveys: Sales Staff Avoid, Ignore E-mail

In a survey of 300 auto dealerships, The Path Co. in Detroit found that about 75% of those dealers' equipped their salespeople with E-mail - even though 90% said they could be connected to the Internet. And an internal poll of salespeople by New York-based sales training company B.E.I. Management Group indicated that 80% of 400 respondents have access to E-mail, but 84% don't use it for prospecting, and 79% don't read it immediately.

## Short Takes

COMPUISA INC. is forming out application development, data center operations and implementation of SAP AG R/3 system to IBM GLOBAL SERVICES under a seven-year \$200 million contract. ... CORREL CORP. in Ottawa has adopted out-of-the-box solutions, Real graphics under ADOBE SYSTEMS INC. in San Jose, Calif., decided it plans to take over Corel. ... A bill introduced in the U.S. HOUSE OF REPRESENTATIVES would double the CUSTOMS SERVICE's budget for combating Internet child pornography to \$5 million per year.

## WIRELESS DATA STEPS CLOSER TO REALITY

But users wonder about costs, security

BY MATT HAMBLIN

**L**AST WEEK'S flurry of wireless data service announcements could mean more technical standards and wider competition that will bring costs down, corporate information technology managers said.

Four deals involving networking, telecommunications and software firms such as Cisco Systems Inc. and Microsoft Corp. reflect a move to wireless Internet access.

Still, users said companies will need thoughtful business cases for using wireless networks because service charges and synchronization software licenses will add up. "Costs could be prohibitive," said Tom Maurice, program manager at USG Corp., a Chicago maker of building products.

USG has deployed 500 Palm III handhelds from 3Com Corp.'s Palm Computing divi-

sion in the past year, with many executives using them to replace laptops on shorter trips for tracking personal information and simple E-mail. Maurice said USG is tracking

wireless synchronization software advances to give the Palm III greater functionality.

Maurice said he expects each handheld user to be charged a wireless synchronization software license of \$100 per year, atop a monthly secure network service charge

## FAQ: Service Deals

What were last week's big announcements?

■ Network equipment vendor Cisco Systems Inc. and phone maker Motorola Inc. said they will spend \$25 over four years to build an IP wireless platform for voice, video and data.

■ Microsoft Corp. and British Telecommunications said they will develop wireless Internet and corporate data devices.

■ Nextel Communications Inc., a nationwide wireless operator, and Metastage Communications Corp. said Metastage will develop an Internet site that Nextel customers can access for stock quotes and more.

■ SICOM Corp., parent of Palm Computing Inc., spent \$17.5M to buy France's Securitelec Technologies, a small developer of wireless data and Internet access software for cellular telecommunications companies.

What's Microsoft already involved?

■ Yes, in November, Microsoft and Qualcomm Inc. formed Wireless Knowledge LLC to create a secure wireless network. Analysts said it could compete with the Synchra alliance created earlier by cellular phone companies Philips PLC, Motorola, Ericsson AB and Nokia.

## New Emery IT Czar Handed Keys to \$75M Overhaul

Goal: Y2K fixes, new IT foundation

BY STEWART DECK

When Ronald Berger took the wheel as director of information systems at package shipper Emery Worldwide two weeks ago, he found himself in the middle of a \$75 million technological refurbishing and makeover project.

So far, the five-year project is running fairly smoothly at the fifth-largest express carrier in the U.S., Berger said, with several new developments slated to come online during the next few months.

The 38-year Emery veteran was hired by the keys to the EMCON 2000 project at the \$2.3 billion company, a division of CNF Transportation Inc. in

Redwood City, Calif. EMCON 2000 has alternately slowed down and sped up during the past five years. Launched in 1994, the project was designed to upgrade Emery's mainframe-based systems, solve any year 2000 troubles and lay an information technology foundation in cargo operations, electronic commerce, data warehousing and sales and marketing.

The overhaul was slowed by a complete business re-engineering in 1996, Berger said. "EMCON's original concept was then changed to support some better internal processes, including making our data warehouse a centerpiece for our internal business needs," he said.

To do that, the warehouse has been redesigned to pull in more data from accounting

systems and to make financial analysis and business queries simpler. "We couldn't easily extract data from some of our legacy systems, even with a fairly new data warehouse," Berger said. "When this is completed in the next three to four months, it will be faster and more efficient and allow us to do better forecasting and strategic planning."

Those abilities are vital to shipping firms such as Emery, said Warren Powell, a professor of operations research at Princeton University. "Without a rock-solid costing system you can't see where the losses are because the business is so complex. Without the ability to see that, carriers can't survive," Powell said.

Other pieces of the EMCON 2000 project are slated to go live in the next several months. Within the next 60 days, the

shipper will unveil a Web-based, package pick-up request application and by year's end will have technology in place to update package tracking as often as every 10 minutes.

Alex Hu, senior technology officer at The Chase Manhattan Bank Corp. in New York, said that with 70,000 users, all types of remote access are under consideration, but wireless data has a low priority. "Honestly, for banks, wireless data doesn't provide a benefit for the security risk," he said.

Analyst Gerry Purdy at Mobile Insights Inc. in Mountain View, Calif., urged IT to follow the wireless developments full time. "Be aware that wireless data is a niche today but will be mainstream in the new millennium," he said.

Big industry players getting involved in wireless also could change some minds. Michael Fouts, senior network analyst at The CIT Group, a financial services company in Livingston, N.J., prefers frame-relay for carrying financial data. But, Fouts said, Cisco's working on an IP platform could mean eliminating staff and office space needed to run his frame-relay network - if it could securely be replaced by wireless communications. ■

RONALD BERGER headed the sale of Emery's five-year IT overhaul.

Why does the moon  
stay in the sky?

What makes  
the stars twinkle?

How does  
the Internet work?

Actually, it works very well. Maybe because so much of it runs on Compaq. Four out of the five most popular Web sites are powered by Compaq. Hundreds of millions of hits are handled by Compaq platforms

every day. Three-quarters of the top ISPs have standardized on Compaq for their Windows NT based Web hosting. And if you've ever received e-mail, chances are, we helped get it to you. To find out how the Internet can help grow your business, feel free to ask the source at 1-800-AT-COMPAQ. Or visit [www.compaq.com/moon](http://www.compaq.com/moon).

# Microsoft Zeroes in on Manufacturers Moving Toward ERP

BY CRAIG STEDMAN

Microsoft Corp. next week plans to announce a version of its distributed computing tech-

nology tailored to manufacturers that face the daunting task of tying together applications ranging from shop-floor de-

vices to enterprise resource planning (ERP) systems.

The Windows DNA for Manufacturing bundle is sup-

posed to provide users with plug-and-play integration of diverse corporate and plant-level systems, although ana-

lysts familiar with the Microsoft plans said the technology should work best in Windows-oriented settings.

Users such as Clorox Co. in Oakland, Calif.; Ocean Spray Cranberries Inc. in Lakeville, Mass.; and Nike Inc. in Beaverton, Ore., are expected to take part in the announcement, according to Microsoft.

A simplified way to tie together diverse applications "is kind of the Holy Grail" for manufacturers, said Jim Shepherd, an analyst at AMR Research Inc. in Boston.

## JUST THE FACTS

### Windows DNA

**What is Windows DNA?** Microsoft's technology for tying together different applications in a Windows-based network.

**What systems are supported?** PC and Web browser clients, Windows NT application servers, NT and other back-end servers.

**What is the key technology in DNA?** Microsoft's Component Object Model specification for distributed applications.

**What complies with Windows DNA?** The multivendor Object Management Group's Common Object Request Broker Architecture.

Y2K PROBLEMS  
ARE LIKE LIFE.  
WHAT DOESN'T  
KILL YOU CAN MAKE  
YOU STRONGER.

In the uphill battle to January 2000, the strong will survive. But the strongest won't stop there. They'll keep striving upwards to the next challenge, and the next. Because they know with each new problem - from compliance to contingency planning to change management - comes a tremendous opportunity to take their enterprises to a new level.

They also know where to turn for the source of strength, Millennia III.

### Not just solutions for Y2K. Solutions with a future.

We're the premier provider of comprehensive, integrated solutions for Y2K and beyond. We don't just help you survive problems. We make sure you gain momentum with every step of your ascent.

### What peaks can we help you conquer?

**Y2K compliance?** CONVERSION2000™, our industry-accepted, end-to-end process, is your proven path to surmounting any and all aspects of the Y2K challenge.

**Distributed systems Y2K risks?** Millennia III's LINQ2000™ delivers Y2K compliance while laying the foundation for effective distributed systems management beyond 2000.

**SECURE2000™** - Customized threat analysis and system management designed to solve Y2K problems in distributed systems while adding on the tools for effective distributed systems management beyond 2000.

**STRATEGY2000™** - Customized contingency planning solutions for all dimensions of the Y2K problem to ensure a business will be self-sufficient before, during and after 2000.

**M**  
MILLENNIA III  
THE FUTURE RECORD

**Contingency planning?** Whether focused on IT, value chain or business infrastructure, our SOS2000™ service ensures you have the plans in place to deal with Y2K or any crisis your organization may face.

**Proving your compliance?** Our TEST2000™ service includes both end-to-end testing and Independent Validation & Verification (IV&V), designed to ensure that what you've changed works as expected.

**Project or program reviews?** To make sure your Y2K project is headed in the right direction, our AUDIT2000™ service identifies project risk areas and recommends how to mitigate those risks.

The Y2K challenge isn't about mountains of code. It's about securing your enterprise's future by constantly reaching higher. If you're ready to scale new heights, come climb with us. Because for the strongest, there's really only one way to go: Up.

Call us today:

[www.millennia3.com](http://www.millennia3.com)

**TEST2000™** - End-to-end testing and/or audit and/or independent validation to ensure changes work as expected when 2000 hits, while keeping your overall testing process.

**SECURE2000™** - Enterprise-level evaluation of an organization's existing Y2K status with an emphasis on IT data and including supply chain, customer and business infrastructure components.

"You can nearly always find a way to move data back and forth, but it's a long and painful process to make them interoperate in a meaningful way," Shepherd said.

For example, users have to figure out how to filter all the data collected by shop-floor devices so the information doesn't choke their ERP systems.

Hoechst Marion Roussel Inc., a pharmaceuticals maker in Kansas City, Mo., tried to limit add-ons to its SAP R/3 system to third-party applications that came with a plug-in interface to the ERP software.

But the company still ended up developing about 160 interfaces on its own, said Gary Peteritis, SAP project manager.

For example, Hoechst Marion Roussel had to build three-way links among R/3 and the systems that manage its development laboratories and maintain the recipes used in production, Peteritis said.

Microsoft has quietly been infiltrating manufacturing plants in recent years, Shepherd said. Windows NT is now "the de facto standard" for shop-floor systems, he added, and it is becoming a credible ERP alternative to Unix. ■

I see Compaq  
making a bet on the  
technology that  
everyone else  
come out with  
new product.  
I get a new budget?

Reality check: If you've invested in technologies like OpenVMS® or NonStop Himalaya®, you count on them to run your business—and they do it well. But with IT rapidly evolving, there are opportunities you'd like to seize. So Compaq is extending these environments to incorporate elements like Web-enabled capabilities,

Windows NT™ interoperability and 64-bit performance. Which means your IT infrastructure can remain firmly in place while new applications like e-commerce come on-line. We offer not just systems but software, services and solutions to make it all work together. So your past investments will continue reaping future returns. To learn more, call 1-800-AT-COMPAQ. Or visit [www.compaq.com/investment](http://www.compaq.com/investment).

## Microsoft Considers Reorganization Plans

Possibilities include refocusing managers on customer segments

BY KIM S. NASH

As Microsoft Corp. continues to search for a leader for its Internet group, President Steve Ballmer also is considering whether — and how — to reorganize the software company as a whole.

A Microsoft spokeswoman downplayed rumors last week that the company is close to announcing a major reorganization, saying Microsoft usually reconfigures itself once every year or two.

Ballmer is "talking to Microsoft employees" to evaluate restructuring options, she said. "If you look at the segments, they are very important customer segments to Microsoft. But it's premature to say the company will reorganize," she said.

According to published reports, one idea said to be in the works is to refocus managers on customer segments rather than technology areas.

For example, instead of today's four product-focused units — personal and business software, tools, Internet and information appliances — Microsoft would be split into teams responsible for, say, cor-

porate customers, retail users and developers.

A sharp customer aim is in keeping with Ballmer's vow when he became president in July: to better understand what different types of buyers want [C.W. July 27].

A revamp by customer segment could help stem the Microsoft "arrogance" that some

information technology users have complained about. Said Rob Enderle, an analyst at Giga Information Group Inc. in San Jose, Calif.,

Splitting Microsoft along user types would mean "you'll have a vendor much more interested in helping customers get where they want to go rather than telling them where

to go," Enderle said. "That has been a serious problem for Microsoft."

For example, some CIOs said they feel pressured by Microsoft to pay more for software they sometimes don't need [C.W. Nov. 30]. Last summer, Microsoft merged its corporate customer and technical support groups in a bid to pay more attention

to IT user needs [C.W. July 27]. Corporate users — which

**MICROSOFT'S**  
Steve Ballmer  
wants to better  
understand buyers' needs

Microsoft sees as its future bread and butter — have long criticized the pressure for spotty support. Microsoft's Internet group has lacked a full-time leader since Pete Higgins took an open-ended leave of absence in December; Ballmer has overseen the team in the interim. ▀

## JUDGE WIDENS WITNESS LIST IN INTEL ANTITRUST CASE

Rulings allow Micron, Data General and Harvard economist to testify

BY BRISY COLLETT

**D**EPOSED WITNESSES from Intel Corp., the Federal Trade Commission is casting a wider net of possible witnesses in its antitrust case against Intel.

In rulings that were publicly released last week, an FTC administrative law judge said executives from Micron Elec-

tronics Inc. and Data General Corp. will be allowed to testify at the trial, which is scheduled to begin March 9. Intel had filed motions to exclude witnesses outside the microprocessor market.

Also, Judge James Timony will allow Harvard University economist Frederic Scherer to present a report about Intel's role in the market for "chips,

chip sets, motherboards and computers."

Intel had wanted to limit the testimony to the microprocessor market covered in the original lawsuit.

Timony also refused to remove FTC attorney Richard Parker from the case. Intel argued that Parker was biased because he had once represented Intel rival Advanced Micro Devices Inc. in litigation against Intel.

The FTC filed suit last June charging that Intel illegally used its power in the chip mar-

ket to coerce three companies — Intergraph Corp., Compaq Computer Corp. and Digital Equipment Corp. — to accept technology licensing deals on Intel's terms. Intel has denied illegal activity.

In another development, the FTC reported that it recently discovered a document that detailed an Intel threat against both Micron and Silicon Graphics Inc.

The nature of the threat wasn't disclosed. Intel wanted to quash the evidence, but the judge denied that motion. ▀

## Microsoft Miscues: More Logs on the Fire

Second tape gaffe, inconsistent testimony may singe software company's defense

BY PATRICK THIBODEAU  
@ASAP@CNET.COM

Halfway through its witness list, Microsoft Corp.'s antitrust defense seems to be tripping on the big things.

The company last week endured yet another videotape gaffe and still another witness whose courtroom testimony didn't square with his own written record.

Whether those incidents will hurt Microsoft's case in the long run remains to be seen. But for now, they're taking a toll inside and outside the courtroom.

Mark D. Wilkins, CIO at Empire Fire & Marine Insurance

Co. in Omaha, said Microsoft's credibility has suffered as a result of its videotape problems.

"It made them look a little more guilty to people on the outside looking in," Wilkins said. "The impression burns them — but it could have been an honest mistake."

Last week, Microsoft used a videotaped demonstration in a bid to show how easily and quickly a PC with Windows 98 can connect to the Internet. It compared that to a PC with Windows 3.1. Both machines were similar, Microsoft said.

However, David Boies, the lead government attorney, asked about the modems. Were

### AT THE TRIAL Brad Chase

Online Inc. picked  
Internet Explorer as its browser because it  
had the best technology. David Clout, an  
AOL vice president, testified earlier that it  
was a promised Windows desktop display  
that clinched the deal.

they similar?

They weren't — the Windows 98 PC had a 33.6K bit/sec. modem, whereas the Windows 3.1 PC used a 28.8K bit/sec. modem.

The performance difference between the two modems was

almost inconsequential. But while Boies asked his questions, Judge Thomas Penfield Jackson had a razor-thin smile.

Two weeks ago, Jackson had cited Boies for "a very professional job" in discrediting a demonstration in which Microsoft implied that only one PC had been used. It turned out that several PCs were used in the filming.

Boies didn't dwell on the videotape with his witness, Cameron Myhrvold, vice president of Microsoft's Internet customer unit.

### No Monoculture Attorney

In court, Boies' wardrobe — a dark blue suit and knit tie — never varies. And neither does his approach to trapping a Microsoft witness: He probes for inconsistencies.

For example, Boies asked Myhrvold whether America Online Inc. and other Internet service providers that wanted

to be in the Windows desktop online services folder had "to commit that 85% of the browsers they ship to customers would be [Internet Explorer]?"

"That's absolutely wrong," Myhrvold said firmly.

Boies quickly handed him an E-mail that Myhrvold wrote in May 1996 that said Internet providers "will have to commit that 85% of the browsers they ship to their customers will be [Internet Explorer]."

Myhrvold, flustered, acknowledged writing the memo. Later, he backed away from his answer and said he didn't know what was in the Internet provider contracts.

The government alleges that Microsoft's contracts with Internet providers — requiring them to ship a high percentage of Internet Explorer browsers in exchange for desktop space — were an abuse of monopoly power. ▀

## Customer Relationship Management

Whether your customers are delighted,  
or simply delighted to leave, revolves  
around knowing your customer data.

### That's why you need the SAS® Solution

Who are your most profitable customers...and why? How many customers are you losing...and why? What value do your customers see in your products and services...or those of your competitors? Instead of just storing your customer data, explore all the possibilities with the SAS Solution for Customer Relationship Management.

It's the only software that integrates the full scope of managing customer relationships. Collect information at all customer contact points...then analyze data to better understand customer needs. Refine business strategies around your most profitable customers. Determine lifetime customer value. All by just pointing and clicking.

## BRIEFS

E-Commerce Drives  
Fingerhut Buyout

Federated Department Stores Inc. in Cincinnati, parent company of Macy's and Bloomingdale's, hopes to leapfrog other retailers in electronic commerce with last week's proposed \$1.7 billion buyout of Fingerhut Cos. Originally a paper-only catalog company, Fingerhut, in Minnetonka, Minn., has aggressively delved into electronic commerce. A Federated spokesman said the company won't merge operations or information technology groups.

Electronic Billing  
Standards Proposed

Two industry groups have developed guidelines for electronic bill presentation and payment. Developed by the National Automated Clearing House Association in Herndon, Va., and Banking Industry Technology Secretariat in Washington, the guidelines are available on the Web at [www.nacha.org/billing/businesspractices.htm](http://www.nacha.org/billing/businesspractices.htm).

Computer Grad Pay  
Offers Jump 7%

The spring recruiting season for new college graduates is off to a healthy start, according to a salary report issued last week by the National Association of Colleges and Employers in Bethlehem, Pa. Computer science graduates saw their average offer jump 7% from last year to \$44,878, one of the highest average offering salaries reported in this survey.

## Short Takes

German application vendor SAP AG last week told the General Services Administration has cleared its R/3 software for purchase by U.S. government agencies... It will act as the first international year 2000 launch. Brazil's Sao Paulo Football Club has filed a liability lawsuit in Sao Paulo State Court against a unit of SIEMENS AG. The soccer team alleges that a private branch exchange system it bought in 1987 needs to be fixed to handle the year 2000 date change.

HUMAN SIDE KEY TO  
DATA WAREHOUSING

At conference, end-user social science aspects will get their due

BY STEWART DECK

A 11th Data Warehousing Institute Implementation conference in Anaheim, Calif., this week, there will be plenty of technical talk about Web interfaces, repositories, pack-

aged analytical applications and architectures. But the human side of data warehousing will share the spotlight.

In warehousing projects, social science can be as important as computer science, said Wayne Eckerson, vice president of technology services at

the Data Warehousing Institute, a for-profit educational group in Gaithersburg, Md.

Unlike many information technology projects that run quietly once they're put in place, a data warehouse usually grows exponentially once it's implemented, Eckerson

DaimlerChrysler to Link  
Dealer PCs to Key Data

Electronic Sales System would centralize information, speed up sales process

BY BOB WALLACE

Many automakers are testing systems designed to help their dealers speed the vehicle sales process by providing them with all the data they need at their desktop PCs.

Among them are DaimlerChrysler AG and Ford Motor Co. The former's Electronic Sales System (ESS), which is being tested, provides online access to everything from vehicle availability to sales incentives in an effort to phase out the insect process of checking physical manuals and querying management.

"This will reduce the process [that] has had errors and takes over an hour to one that takes 15 minutes and has zero errors," said Tom Peyton, senior manager of retail technology at DaimlerChrysler.

"Salesmen will be able to get all the information they need in one place," Peyton said.

Packages such as ESS are being deployed widely in the auto industry because product information, pricing and sales incentives change frequently, making it difficult for salespeople to keep up with this paper-based information and slowing the sales process, analysts said.

ESS is being piloted in six dealerships in the first half of this year, but the automaker hasn't set a national rollout

date for the package. ESS runs with other applications on dealers' current computers.

But one industry expert predicted that it will be quite a while before dealers widely use programs such as ESS.

"Although this type of system is of great benefit to dealers and consumers, adoption of most high-tech items takes years before gaining mainstream acceptance, much like

the Internet in general," said Chris Denove, an analyst in I. D. Power and Associates' Agoura Hills, Calif., office.

"I'm concerned that salespeople will be reluctant to take advantage of its capabilities," Denove said.

Nonetheless, ESS offers functions that aren't supported on DaimlerChrysler's consumer Web site, Peyton said. These include checking for current factory incentives, scanning the inventory of other dealers, handling trade-ins, ordering vehicles and discussing service contracts.

Consumers won't have access to ESS.

DaimlerChrysler developed ESS with Houston-based Dealer Solutions and PBS Financial Systems in Calgary, Alberta. ■

Age-Bias Case Settlement  
Offers IT Layoff Guidelines

BY BARR COLE, BOSTON/MA

A recent settlement between a computer maker and an anti-discrimination agency could set a new standard for layoff procedures in the IT industry.

Bull HN Information Systems Inc. and the Massachusetts attorney general last month settled charges that the company discriminated against older workers during layoffs in the early 1990s.

Though the settlement includes no monetary payments or admission of wrongdoing, the Billerica, Mass.-based company agreed to do the following:

■ Notify former employees of

new job vacancies.

■ Require senior management to review all layoffs of workers over the age of 40.

■ Change its internal complaint procedure for age discrimination.

"These are fairly detailed conditions," said David Lofholm, a partner in the labor and employment group of Graham & Jones LLP, a law firm in San Francisco. Lofholm said a lot of companies fail to protect themselves

said. To make sure the projects have the ongoing support they need, IT managers have to make sure they keep in touch with their users and executives through team-building and quality assurance presentations, he said.

"Data warehouses are not simply IT projects because their ultimate success depends so much on the end users," said Jackie Sweeney, an analyst at International Data Corp. in Framingham, Mass.

"More data warehousing projects fail from organizational reasons than from technical reasons," said Herb Edelstein, an analyst at Two Crows Corp., a consultancy in Potomac, Md.

The conference will be far from a sociology seminar, however.

The event will also feature several sessions covering integration of data warehousing and enterprise resource planning (ERP) software. That topic garners so much interest because "ERP systems have become the big data-generators for many organizations, but they aren't particularly good at business intelligence and analysis," Edelstein said.

Eckerson said he expects sessions on data warehouse Web-connectivity to be well-attended. "Because it requires minimal training and reduces IT overhead, the Web is becoming the de facto warehouse access platform," he said. ■

adequately from age discrimination complaints.

A company planning layoffs should compare the average age of its current workforce with the average age of the workforce after the layoffs, he advised. "It's also good to compare the average age of employees being laid off with the ones who are staying," Lofholm said.

If the comparison is disproportionate, make adjustments, he said. Lofholm said

companies should also have employees sign a release that says they won't sue the company for age discrimination, in exchange for a more attractive severance package. ■

# LACK OF LOG-IN LIMIT POSES SECURITY RISK

Free E-mail gives hackers too good a chance to guess passwords

BY ROBERTA FUSARO

**M**ANY THOUSAND free E-mail services on the Web are too forgiving. They allow unlimited attempts for users to log in to their E-mail accounts — and that gives hackers plenty of opportunities to figure out the password that works, a

security expert said last week.

But several vendors contacted by *Computerworld* said they are finding ways to fix the problem.

Most corporate E-mail systems will let a user try to log in three to five times but then lock him out and require him to contact a network administrator to gain access, said Ira

Winkler, president of Information Security Advisors in Severna Park, Md.

By contrast, some free Internet mail systems — such as Yahoo Inc.'s YahooMail, Excite Inc.'s Excite Mail and Microsoft Corp.'s Hotmail — allow unlimited log-on attempts. That gives hackers multiple shots at guessing an E-mail ac-

count's password. Winkler said. And that password-cracking process could be automated, he said.

The free mail-service providers also don't notify an account holder that a hacker has been making failed log-on attempts, Winkler said. "That's just bad [security] practice," he said.

The ubiquity and easy access to free E-mail services has attracted more and more business users, Winkler said. And some companies, such as American Express Travel Related Services Co., are using free E-mail as a means of branding and attracting new customers to their Web sites.

Hotmail officials said they're working on a fix but wouldn't elaborate. A product manager for Hotmail said no E-mail accounts have been compromised in this way, and the company feels the possibility of a break-in is remote.

A spokeswoman for Yahoo in Santa Clara, Calif., said the company recently implemented new security measures to prevent multiple log-ins from invaders, but she wouldn't offer specifics. "It will lock up the account after a certain number of attempted log-ins," she said.

Excite officials in Redwood City, Calif., hadn't responded by press time to a request for comment. ■

Continued from page 1

## Users Buy In to Software Rentals

another way to provide the capabilities of our products to a different set of customer needs," said Peter Boit, general manager of worldwide volume licensing at Microsoft.

Meanwhile, smaller industry players, such as Corio Corp., FutureLink Distribution Corp. and Interlink Inc., continue to trust out new customers, who pay a monthly fee to tap into an ever-expanding variety of applications offered by the service providers that hold licenses to the software.

Among them is Richard Heaps, chief operating officer at Redwood City, Calif.-based Clarent Corp., which expects to cut costs by up to 30% during the next five years by renting PeopleSoft Inc. financial and manufacturing applications from Corio.

Clarent will be up and running on the software in four months, a feat it could never have accomplished in-house with its five-person IT group, Heaps said.

By outsourcing the implementation and renting the software from Corio, "we can literally go from generation zero to state-of-the-art systems in one leap and not add anything to our overhead internally," he said.

Several users said demand for software rentals is tied directly to the IT labor shortage.

As a result, analysts say the market for software rentals should take off in the next few

years, as skilled IT workers are expected to remain in short supply. Forrester Research Inc. in Cambridge, Mass., projects that the market for application rentals — which stood at zero just a few months ago — will reach \$6.4 billion within two years.

For example, Result Communications Ltd. in Calgary, Alberta, turned to FutureLink for network operating software and services because it had neither the staff nor the expertise to build and maintain a complex network plus a wide range of graphics and business software, said Rob Sheet, director of new media.

So instead, Result pays a monthly fee of \$200 per workstation for FutureLink to deliver both Macintosh graphics applications and Windows-based business applications over a single network. FutureLink's offering is based on technology from Citrix Systems Inc. in Fort Lauderdale, Fla., that it rents out to customers of its network services.

"The Citrix technology, which sits on top of the operating system software, lets us of-

fer up any application over any operating system to any hardware platform," said FutureLink CEO Cam Chell.

Calgary-based FutureLink, which bills itself as a computer utility, also rents financial applications from Great Plains Software Inc. and customer management software from Onyx Corp.

In all these cases, "the most important thing happening is that ownership of software is changing. People are starting to look at software more as a service than as property," Wainwright said.

### Starting Small

For now, nearly all the vendors are targeting the software rentals at midsize companies with fewer than 1,000 users. But eventually, observers expect the concept to catch on with larger companies, which also are having problems recruiting, training and retaining skilled IT workers.

"I think we'll see IT departments using rental models internally," said Robert Dana, vice president of product management at Interlink. He added that he foresees service providers hosting and supporting a company's custom applications, which they will turn around and serve up to users in exchange for a monthly or per-transaction fee.

Interlink is taking an altogether different approach from other companies in the blossoming applications services market. Rather than renting packaged software, the Houston-based service provider is serving up "a catalog of new

applications that were designed to be Web-based from the beginning," Dana said.

Those include an online registry service that electronically records and verifies rights to intellectual property and project software that lets geographically scattered teams

use a private Internet-based database for a monthly fee of about \$15 per user.

Another vendor, Biztone.com, a Malaysian start-up, plans to offer a Java-based enterprise resource planning system designed from the start as a rental-only application. ■

## EDS and MCI Swap Outsourcing

Brown, chairman and CEO of EDS.

EDS will outsource the bulk of its global network to MCI WorldCom in a 10-year agreement valued at \$6 billion to \$15 billion.

In return, MCI WorldCom will outsource a major portion of its information technology services to EDS in a 10-year deal worth between \$5 billion and \$7 billion. EDS also will acquire MCI Systemhouse, the IT services arm of WorldCom, for \$145 billion.

MCI Systemhouse delivered \$1.7 billion in revenue last year but suffered from flat sales and a failure to win big name contracts, MCI officials said.

### Changes to Come

Industry watchers said MCI Systemhouse clients probably won't see changes in their service in the near term, but prospective customers will see a flurry of changes.

They "need to stop very quickly and wait for some of this chaos to die down," said Dean Davison, an analyst at Meta Group Inc. in Los Ange-

les. "We will see significant and very dramatic changes in the sales force, processes, pitches and messages to the next 60 to 90 days."

For existing MCI Systemhouse customers, executives plan to tap into EDS's widening in-house services.

"We will now have much more breadth," including applications and consulting experience, "things that we didn't have," said John Sidgmore, vice chairman of MCI WorldCom.

Together, the companies plan to sell networking services to business and government agencies worldwide.

EDS and MCI WorldCom officials said they will market each other's services but will let customers bring in other service providers.

As part of the agreement, 12,000 MCI WorldCom employees in the U.S. and Canada are expected to join EDS, while 1,000 EDS network employees will be offered employment at MCI WorldCom.

The outsourcing arrangements and employee transfers should be finalized by May. ■

**RESULT'S Rob Sheet:** Company pays \$200 per workstation for apps each month

AND THE ENTERPRISE

As with every new piece of enterprise technology,  
someone has to try it first.

**Microsoft**

Where do you want to go today?

The good news is, it won't be you.

**Introducing Microsoft® SQL Server™ 7.0, tested and proven in companies like Pennzoil and HarperCollins.\*** With an impending merger on its hands, Pennzoil faced a rapid increase in its user base for SAP® R/3™. In order to handle this mission-critical load, Pennzoil turned to SQL Server 7.0. Then there's HarperCollins. The publishing leader uses the SQL Server 7.0 data warehousing platform to process hundreds of gigabytes of data in order to make smarter and faster business decisions. To see who else is deploying Microsoft SQL Server 7.0 in their enterprise go to [www.microsoft.com/sql/](http://www.microsoft.com/sql/)

# WHERE ARE THE THIN CLIENTS?

Network computers haven't stormed PCs, but IBM sees markets where they make sense

**L**AST YEAR was supposed to be the year of the network computer. But only half a million thin clients were shipped last year, a number industry players hoped they would see in 1997. **Edward Petronelli**, recently appointed to head IBM's network computer division, acknowledges that thin clients haven't stormed the market but says IBM saw sales rise last year.

In an interview last week with *Computerworld* senior writers Stacy Collett and Stewart Deckl, Petronelli discussed where thin clients work and where PCs are better.

**Q:** In what vertical markets are thin clients working well?

**A:** We're seeing finance, security and insurance to be very early adopters and rolling out large numbers [of thin clients] because of their need to connect to the Internet. Many of their applications are spread across different servers.

Right behind that we're seeing retail and distribution. We're seeing [them] do everything from checking inventory, to linking to suppliers, to providing their own employees with access to benefits information.

**Q:** Are there businesses where thin clients are not a good fit?

**A:** If you're doing sophisticated CAD [computer-aided design], designing airplanes, it's probably not a good fit. Also, an environment where every end user has a different suite of personal applications [also is a mismatch].

**Q:** Will customers continue operating for a mix of thin clients and PCs in 1999?

**A:** Our customers are saying there is a need for both. With

some of the financial institutions or insurance companies, 70% to 80% of devices may be thin clients. Others may be a 50-50 split depending on what the users are doing.

As new applications and other pervasive devices come out, there will be PCs, thin clients and some handheld devices out there that hook into the same environment.

**Q:** Critics say all the software needed to run thin clients isn't available. Where is the software today?

**EDWARD PETRONELLI**  
IBM's customers  
now need for both  
PCs, thin clients

## New Fixes Issued for NT 4.0

BY SHARON GAUGHN

Microsoft Corp. has issued a set of fixes for its Windows NT 4.0 Service Pack 4.0, released last month.

The fixes repair a bug that hinders some users from installing year 2000-compliant files that are part of the service pack. And another fix updates the Java virtual machine, bringing it into compliance with a federal court's order to make Microsoft's Java implementation follow Sun Microsystems Inc.'s standard, per Sun's Java license.

"The joke around here is, 'Which bugs did the service pack fix and which bugs did it create?'" said Bob Frane, director of information systems at PACE International Union, a paper workers union in Nashville. "Waiting a while before you download anything is almost becoming a rule of thumb with Microsoft" because of frequent bugs in both initial software and subsequent service pack releases, he said.

"There were so many updates to that service pack —

600 new files — that I'm not surprised there were some problems," said Bill Peterson, an analyst at International Data Corp. in Framingham, Mass. But he said few users would be affected by the original bugs.

The year 2000 bug affects users who have Site Server Express 2.0 and MSMQ 1.0 or I/OE message queuing on the same PC. The service pack's year 2000 update unintentionally uninstalled MSMQ, a Microsoft spokesman said.

The fixes can be downloaded from [www.microsoft.com/ntserver](http://www.microsoft.com/ntserver). Anyone who has downloaded Service Pack 4.0 doesn't need to download the pack again.

## Better Links For Embedded Devices

Sybase, Wind River to test integration with databases

BY STEWART DECK

Sybase Inc. and Wind River Systems Inc. last week announced they will work together to provide better links between far-flung embedded database devices — such as inventory scanners, intelligent vending machines or manufacturing systems — and central data repositories.

Sybase will integrate its SQL Anywhere database and its UltraLite deployment technology into Wind River's Tornado application development software to create a development platform for embedded database devices.

A beta program for the technology will begin in the second half of this year.

The technology was designed to give users "a standard database interface to create applications in memory-constrained environments" so they won't have to invent their own application programming interfaces, according to Sybase.

### Corporate Target

The partnership also was designed to improve corporate connectivity and remote management and provide more data from remote devices through their embedded database systems.

Paul Zorfas, a Waltham, Mass.-based analyst at International Data Corp. and First Technology Inc., said the Sybase/Wind River partnership should help answer complaints that smart handheld devices are neither robust nor reliable enough.

"This is a big step toward developing [a reliable infrastructure] by realistically extending the corporate environment into client-type devices and bringing high-performance products into the embedded world," Zorfas said.

## 11 Nations Form Alliance Group to Tackle Y2K

U.S. first to contribute financial backing

BY MATT HANSEN

Representatives from 11 countries have created the International Y2K Cooperation Center to help coordinate multinational efforts to fix the bug.

The center's formation, announced Feb. 5, grew out of a December meeting at the United Nations, where delegates from 120 countries requested an ongoing coordinating group to aid international coopera-

tion on year 2000 fixes.

The Washington-based center will receive operating funding through voluntary donations to the World Bank. Nations will be asked to contribute expert year 2000 advisors to the center as well.

The U.S. has pledged \$12 million to the World Bank for such efforts, the only financial backing so far.

The center won't appropri-

ate funds to nations such as Russia, which recently raised its estimated bill for year 2000 fixes to \$3 billion (see related story, page 44). But it will assist international groups such as the International Telecommunication Union and the International Atomic Energy Commission by sharing information from year 2000 efforts, a spokesman said.

The 11-nation steering committee includes John Koskinen, chairman of the President's Council on Year 2000 Conven-

tion, and year 2000 coordinators from Bulgaria, Chile, Iceland, Japan, Mexico, Morocco, the Netherlands, the Philippines, the Republic of Korea and the U.K.

The director is Bruce McConnell, past chief of information policy and technology at the U.S. Office of Management and Budget.

Analyst Howard Rubin of Rubin Systems Inc. in Pound Ridge, N.Y., said the center was needed. "Until now, there's been no way to pull together information from key groups such as the [International Telecommunication Union] for sharing," he said.

## **Most companies are running on a legacy and a prayer.**

### **Before you move to ERP, you'd better know what's on the mainframe.**

The programmers who wrote the legacy code are long gone. Programs have been patched together over the years, with no reliable documentation. Things work, but no one really knows how. All good reasons to move to ERP. And all good reasons to let ADPAC's SVCCommands tell you everything you need to know, before you need to know it.

SVCCommands is the most powerful reverse engineering tool available to mainframe programmers, analysts and consultants today. It documents relationships. Delivers application inventories at the system level. Provides functional analysis at the program, application, and enterprise level. Finds code no longer used, and identifies missing source code. In short, it delivers all the critical information that will help make your move to ERP as glitch free as possible.

The ADPAC SystemVision family includes a number of powerful maintenance and reengineering tools. You'll find them on IBM and compatible mainframes in many of the world's largest corporations and utilities, and on university computer systems and critical government mainframes. Find out more from ADPAC, or from one of our Consulting Partners, including Renaissance Worldwide, Intertec Communications, The Trotter Group, Transys, and MTS People's Source.

**HP. Better color, no matter what you're printing.**

*Introducing a new line of HP Color LaserJet printers. Be it good times or fantastic times, people want great color printouts. Which is why our new fast and affordable*

HP Color LaserJet printers start at \$2,499.

Color LaserJet printers offer our exclusive ImageREt Color Layering technology. Rather than placing red dots next to yellow dots to create the illusion of orange, our process literally mixes the colors to create real orange. Or maroon. Or millions of other colors. All at impressive printing speeds, up to 6 ppm. Visit [www.hp.com/go/officecolor](http://www.hp.com/go/officecolor).

# USER VOICE IS MISSING FROM MICROSOFT TRIAL

Potential government antitrust remedies may increase IT choices, add complexity

BY NIM S. NASH

**W**HEN THE federal antitrust trial of Microsoft Corp. began in October, legal experts and industry pundits eagerly pondered what could happen to the vendor if it lost.

Microsoft would receive its comeuppance and be forced to strip the Internet Explorer browser from its Windows operating system, some said. Others speculated that the company would simply settle the case to avoid the kind of protracted, costly courtroom war that be-deviled IBM for 13 years.

Neither scenario appears likely now. 18 weeks into the trial at the U.S. District Court in Washington. So what's left? Based on interviews with lawyers, information technology managers and economists, *Computerworld* has identified five key remedies the government could impose — and their potential impact on IT buyers (see chart).

David Johns, CIO at Owens

Corning, offers views that are typical among IT managers. Though Microsoft is an aggressive company that has both positive and negative influences on the industry, too much government intervention would be worse, Johns said.

"Let's be reasonable. We don't want the industry to be marred by government interference," he said, stressing that he hasn't seen Microsoft use any unfair tactics in its dealings with Owens Corning. The Toledo, Ohio-based manufacturer has standardized on Microsoft products for both PCs and servers.

## The Microsoft Squeeze

The best remedy for Microsoft wrongs — should the U.S. Department of Justice prove any have occurred — is to prohibit exclusionary licenses, he added. That is, the court should stop Microsoft from squeezing PC makers to favor Microsoft applications in order to get good prices on Windows, Johns said.

"That," he said, "would pro-

vide competition."

But first, Judge Thomas Penfield Jackson must rule that Microsoft is a monopolist, said Bob Rubin, CIO at Elf Atochem North America Inc. in Philadelphia. So far, no court, no judge, no binding legal paper ever has labeled Microsoft with the dreaded M word.

Microsoft spokesmen often point that out.

But if Microsoft were found to hold monopoly power, it would, under antitrust rules, have to abide by more restrictive rules than other companies.

"Regardless of how they want to twist numbers, Microsoft has a monopoly on the desktop," Rubin said. "When you buy a new computer, it comes with [Microsoft] software, and there are, today, no practical alternatives for a CIO."

Meanwhile, the narrow browser-bundling issue that largely propelled the Justice Department's investigation of Microsoft now is a loser's argument for the government,

said James Brock, an economist at Miami University in Oxford, Ohio.

A June 1998 appeals court ruling in a related case in effect said that Microsoft can indeed

ELF ATOCHEM'S BOB RUBIN: "Regardless of how they want to twist numbers, Microsoft has a monopoly on the desktop."

combine the once-separate browser and Windows.

Brock votes for carving Microsoft into pieces. "Unless you remedy the structural existence of the monopoly, then government will constantly be involved in refereeing and handling complaints," he said. "That's a path toward regulation no one wants."

That's why simply tweaking the consent decree Microsoft already operates under is unlikely to happen, according to

Terry Moritz, head of litigation at Goldberg, Kohn, Bell, Black, Rosenbloom & Moritz Ltd. in Chicago.

After the Justice Department chased Microsoft for alleged antitrust violations in the early 1990s, the adversaries signed a deal in 1994 widely viewed as a slap on the wrist for Microsoft. Essentially, Microsoft agreed not to use certain restrictive clauses in its li-

cence agreements. The decree never mentioned it being a monopoly.

Neither Microsoft nor the Justice Department is apt to agree to any new settlement after having weathered a full-blown trial: both sides have gone too far to strike a bargain now, Moritz said.

Yet IT buyers — whether they are for or against Microsoft — don't have a strong voice at the trial.

The Justice Department originally intended to have Scott Vesey, an IT manager at The Boeing Co., take the stand, but Vesey was replaced by a Sun Microsystems Inc. executive just before the trial started. Vesey's written and video depositions are buried in the trial record. Now, not a single IT manager will testify. ■

## Five Ways the Microsoft Antitrust Case Could Affect IT Buyers

A government victory over Microsoft could make the lives of IT folks easier or tougher, depending on the remedy chosen.

REMEDY	ADVANTAGES	DISADVANTAGES	IMPACT ON TECHNOLOGY BUYERS
Split Microsoft into separate companies, such as one for operating systems and one for applications.	Microsoft's monopoly power can be tempered only by drastic structural changes to the company.	Tampers with one of the world's most successful companies and could damage the U.S. economy.	More competition in the Windows market could lower prices, increase choices. But it could make more integration work for corporate users, especially those who have standardized on Microsoft products.
Treat Windows as an "essential facility" and force Microsoft to make its source code freely available.	Windows is too important to be controlled by a single entity.	Windows is Microsoft's intellectual property; the government can't usurp it.	A freeware-like Windows would mean low license fees — or no fees at all. But reliable maintenance and future advancement of the operating system could falter.
Force Microsoft to make public all Windows application programming interfaces.	Eliminates Microsoft's inside knowledge of Windows that other application developers don't have.	Inside information about Windows is hard-won intellectual property that should be protected.	Optimists hope for more bountiful software choices as developers would be able to write applications that work as well on Windows as Microsoft's own applications.
Block Microsoft contracts that induce PC makers to exclude competing software.	Stops Microsoft from unfairly wielding operating system power to thwart competition.	Microsoft's contracts are legal and examples of the company's business savvy.	IT managers would gain more control over which software products they buy with their PC hardware, possibly saving money.
Mandate one for causing damage to the market.	In conjunction with some other remedy, would help address market damage caused by Microsoft's business tactics.	An easy out for a company with, at last count, \$19.2 billion in cash; hard to assess amount of market damage, if any; doesn't address Microsoft's past behavior or guard against future wrongdoing.	None.

# LOTUS DELIVERS TEAMWARE

## QuickPlace tool joins growing field

BY ROBERTA FURBER

**T**HE EMERGING category of quick-hit, intranet seminars called "teamware," which is meant to aid collaboration among employees, got a boost last week with IBM subsidiary Lotus Development Corp.'s announcement of QuickPlace.

Several companies offer such products, which let workers share information and files over the Web by letting them trade and edit documents, track meetings in common calendar folders and message one another.

There will be about 20 million to 24 million teamware users by 2002, estimates Inter-

national Data Corp. in Framingham, Mass.

Teamware supports project-oriented collaboration but isn't regarded as a replacement for traditional E-mail and calendaring systems or full groupware platforms such as Lotus Notes and Microsoft Exchange, said Tom Austin, an analyst at Gartner Group Inc.

And unlike full-blown groupware, teamware relies on end users, not information technology specialists, to set up and manage the system, he said.

"All you need is [a browser], access to the Web and away you go," said Phil Usher, a senior vice president of IT at Countrywide Home Loans Inc. in Calabasas, Calif. The company has been using a beta version of QuickPlace to communicate with several partner companies, he said.

QuickPlace, like other teamware products, can work with an E-mail client or a browser.

For E-mail clients, QuickPlace supports just Notes. It costs \$99, but will be included in Notes 5.0 and Domino 5.0 this spring. Several partners

plan to host the application online in the second quarter.

QuickPlace, Lotus' second teamware product since Instant TeamRoom in 1997, most directly competes with ERoom from Instinctive Technologies Inc. and Involvo from Chang-

point Corp. and US West Inc., Austin said.

Lower-level collaboration tools include Microsoft Corp.'s free NetMeeting and Netopia Inc.'s Timbuktu products, which let small groups share documents, messages and presentations. But neither integrates with E-mail clients like teamware products do. ■

## Sun Creates User Network

### Unix Server users share with peers

BY JANUMAR VIJAYAN

Users of Sun Microsystems Inc.'s Unix servers looking for help on high-availability issues soon will be able to turn to their peers for guidance through a Sun-sponsored network.

Sun last week launched the SunUp Network, under which users can trade information on best practices and benchmarks relating to application availability. The network also will carry information from The Uptime Institute in Santa Fe, N.M.

The program formalizes a two-year effort by Sun to work with several of its largest customers to identify and resolve

problems leading to server failures and application downtimes. Under the SunUp program, Sun also will make information gathered under that effort available to whomever joins the network.

"I think it is a great idea," said Ann Glisan, manager of systems development at Federal Express Corp.'s data center in Colorado Springs. "What they have done is create a task force of customers that can talk and share information on high-availability issues." ■

### HP Color LaserJet 4500 Series printers Featuring ImageREt Color Layering

- Designed for workgroups of up to 20 people
- 4 ppm color, 16 ppm black
- Supports a wide range of media including envelopes, labels, transparencies and soft-gloss paper
- 8 1/2" x 14" color auto-duplex option
- High volume paper handling—up to 900 sheet input capacity

Starts at \$2,499

### HP Color LaserJet 8500 Series printers Featuring ImageREt Color Layering

- Designed for departments of up to 50 people
- 6 ppm color, 24 ppm black
- Full range of in-house color printing features—up to 11" x 17" full-bleed for flyers, newsletters, brochures on a wide range of media
- 11" x 17" color auto-duplex option
- Very high volume paper handling—up to 3,000 sheet input capacity

Starts at \$5,999

## TOSHIBA

Portables. Desktops. Servers.

## BRIEFS

## Sybase Gets DB Maker

Sybase Inc. last week announced it has purchased Data Warehouse Network, an Ireland-based, privately held provider of prepackaged business intelligence applications. Data Warehouse Network's offerings target industries including retail banking, insurance, telecommunications, health care and utilities. The products contain data models specifically designed for those industries and will be merged into Sybase's Business Intelligence Division. Terms of the deal weren't disclosed.

## Cognizant Revenue Up

Cognizant Technology Solutions Corp., a software development and maintenance company in Teaneck, N.J., last week reported that revenue for the fourth quarter increased 143% to \$79.5 million from \$3 million in the same period a year ago.

Net income was \$2.6 million in the fourth quarter. Kumar Mahadevan, chairman and CEO, said the company has substantially reduced its reliance on its 2000 remediation business and is achieving growth from clients who want to go beyond year 2000 projects.

## TRW Spins Off Unit

TRW Inc. last week launched an Internet security company, called E-Scouty, in Reston, Va., to provide security technologies and consulting to businesses engaged in electronic commerce.

The spin-off will use TRW security techniques and technologies developed for high-security government agencies and apply them to the private sector, such as the health care, financial and insurance industries. The new company will work closely with TRW's systems integration unit.

## Palm Unit CEO Named

3Com Corp. has tapped WorldView Inc.'s president and CEO to lead its Palm Computing division. Robin Abrams, 47, assumed her post as Palm Computing's president Feb. 12. She takes over for Justin Roberts, who was serving as acting president.

## WALL ST. THROWS A WET BLANKET ON LYCOS DEAL

Popular Web portal, USA Networks looking to create E-commerce Goliath

BY SHARON MACIELIS

ONE OF THE LAST independent top 10 Internet portals announced a partner last week, Lycos Inc. said it would join forces with part of USA Networks Inc.

The move means Lycos would be under the same corporate tent as the Home Shopping Network and Ticketmaster Online Citysearch Inc. Home Shopping Network sells goods on both television and the Internet. Ticketmaster is the largest U.S. ticket seller for sports and entertainment events and publishes local Internet city guides.

The combined USA Lycos Interactive Networks Inc. can become "the largest E-commerce network anywhere," said Lycos President and CEO Robert J. Davis, who also will be president and CEO of the new corporation. "It's an opportunity to get very big, very fast. You create scale. I think we have created a watershed event for this industry."

USA Networks' head Barry Diller, a high-profile media executive, would be the new company's chairman. The complex stock deal would give Lycos shareholders, who most approve the plan, a 30% stake in the newly merged entity. However, some major shareholders have expressed disapproval with the terms.

Internet analysts generally praised the move, saying Lycos gets access to a heavy-duty order fulfillment center in Home Shopping Network, as well as a solid entry into more localized commerce opportunities.

"Ticketmaster is the killer app for local commerce," said Melissa Kline, an analyst at The Yankee Group in Boston.

However, Wall Street hammered the deal: Lycos stock plummeted 20% the day of the announcement. Investors apparently were disappointed that USA would play only slight-

ly more than last Tuesday's market price for Lycos stock.

Lycos, based in Waltham, Mass., has made several acquisitions in recent years and now is a network of sites that includes Hot Bot.com, Tripod.com and Angelfire.com, as well as its flagship Lycos.com. All together, the Lycos properties, except the fourth most popular destination on the Web, reaching

LYCOS CHIEF Robert J. Davis considers the USA Networks deal a "watershed event."

46.5% of all Internet users, according to Media Matrix Inc. in New York.

But integrating that existing network with Citysearch and Home Shopping Network may take time, some observers warned. But Lycos has bolstered its position as it tries to sell more goods via its site, analysts said. "From the point of view of E-commerce, it looks like a pretty good deal," said Barry Part, an analyst at International Data Corp. in Menlo Park, Calif. "It's a good step in a long journey."

## CA Acquisition to Bolster Outsourcing Power

\$435M takeover will fill a big need

BY THOMAS HOFFMAN

Trying to bolster its small but growing professional services business, Computer Associates International Inc. last week made a \$435 million cash tender offer to acquire Jacksonville, Fla.-based Computer Management Sciences Inc. (CMSI).

AT A GLANCE

## Computer Management Sciences Inc.

Location: Jacksonville, Fla.  
Employees: More than 900  
Clients: Coca-Cola Co., Wachovia Corp., Merrill Lynch & Co., CSA Corp., Kemper Financial Services, Lockheed Martin Industrial Systems Co.

1998 revenue: \$106.2 million  
1998 net income: \$20.4 million

Services: Development and installation applications, including object-oriented products and relational database technologies. Provides IT outsourcing, facilities management and maintenance of legacy and client-server systems.

The deal will provide the Isabella, N.Y.-based software giant with CMSI's bluechip list of outsourcing clients, including Coca-Cola Co. and Merrill Lynch & Co., as well as application development services that CA has lacked, said Sterling Aury, an analyst at J.P. Morgan & Co. in New York.

Unlike some systems integrators, CMSI is "quite profitable," noted Greg Bala, an analyst at The Yankee Group in Boston.

For the calendar year 1998, CMSI ranked in \$12.4 million in profit on \$90.2 million in revenue.

CA, meanwhile, pulled in \$77 million in services sales for the fourth quarter, putting it on an annualized run-rate of \$400 million including CMSI sales, Aury said.

CMSI also brings a dozen "systems outsourcing centers"—regional centers that develop and run applications for customers — to CA's Global Professional Services unit.

Though that will certainly help CA domestically, analysts want to see CA follow through on its commitment to build another dozen outsourcing centers around the world to sup-

## DEAL HIGHLIGHTS

## Proposed Partnership

New USA/Lycos Interactive Networks Inc. deal includes:

- Lycos Inc. network, including Lycos, Tripod, Angelfire, HotBot
- Ticketmaster
- Home Shopping Network
- Internet Shopping Network/First Auction

## Ownership

port its international professional services growth. To that end, Aury said he would like to see CA make a similar acquisition in Europe.

CA intends to grow its services business organically and by acquisitions," said Sanjay Kumar, CA's president and chief operating officer.

## International Flavor

Kumar said the company intends to begin establishing international outsourcing centers within 90 days of the close of the CMSI deal.

Since losing its \$9 billion bid for Computer Sciences Corp., CA has acquired four services firms, including Aventura Systems ASA, a Norwegian systems integrator that specializes in electronic commerce. CA said it plans to close the CMSI acquisition within 30 days, pending regulatory approval.

One of the big challenges going forward for CA is to strike a balance between its own services business and the relationships it maintains with big services partners such as Electronic Data Systems Corp. and Andersen Consulting. Aury said.

## BRIEFS

## Sybase Gets DB Maker

Sybase Inc. last week announced it has purchased Data Warehouse Network, an Indian-based, privately held provider of prepackaged business intelligence applications. Data Warehouse Network's offerings target industries including retail banking, insurance, telecommunications, health care and utilities. The products contain data models specifically designed for these industries and will be merged into Sybase's Business Intelligence Division. Terms of the deal weren't disclosed.

## Cogizant Revenue Up

Cogizant Technology Solutions Corp., a software development and maintenance company in Temecula, Calif., last week reported that revenue for the fourth quarter increased 140% to \$98.5 million from \$8 million in the same period a year ago.

Net income was \$2.6 million in the fourth quarter. Kumar Mahabadi, chairman and CEO, said the company has substantially reduced its reliance on a 2000 remediation project and is achieving growth from clients who want to go beyond year 2000 projects.

## TRW Spins Off Unit

TRW Inc. last week launched an Internet security company, called E-Curty, in Reston, Va., to provide security technologies and consulting to businesses, government and electronic commerce.

The spin-off will use TRW's security technologies and technologies developed for high-security government agencies and apply them to the private sector, such as the health care, financial and insurance industries. The new company will work closely with TRW's systems integration unit.

## Palm Unit CEO Named

3Com Corp. has tapped VeriFone Inc.'s president and CEO to lead its Palm Computing division. Blake Abrams, 47, assumed his post as Palm Computing's president Feb. 10. He takes over for Justin Rubin, who was serving as acting president.

## WALL ST. THROWS A WET BLANKET ON LYCOS DEAL

Popular Web portal, USA Networks looking to create E-commerce Goliath

BY SHARON MACIELIS

ONE OF THE LAST independent top-10 Internet portals announced a partner last week: Lycos Inc. said it would join forces with part of USA Networks Inc.

The move means Lycos would be under the same corporate tent as the Home Shopping Network and Ticketmaster Online-Citysearch Inc. Home Shopping Network sells goods on both television and the Internet. Ticketmaster Online-Citysearch sells tickets for sports and entertainment events and publishes local Internet city guides.

The combined USA/Lycos Interactive Networks Inc. can become "the largest E-commerce network anywhere," said Lycos President and CEO Robert J. Davis, who also will be president and CEO of the new corporation. "It's the opportunity to get very big, very fast. You create scale... I think we have created a watershed event for this industry."

USA Networks head Barry Diller, a high-profile media executive, would be the new company's chairman. The complex stock deal would give Lycos shareholders, who made up the plan, a 30% stake in the newly merged entity. However, some major shareholders have expressed disappointment with the terms.

Internet analysts generally praised the move, saying Lycos gets access to a heavy-duty order fulfillment center in Home Shopping Network, as well as a solid entry into more localized commerce opportunities.

"Ticketmaster is the killer app for local commerce," said Melissa Banc, an analyst at The Yankee Group in Boston.

However, Wall Street hammered the deal: Lycos stock plummeted 26% the day of the announcement. Investors apparently were disappointed that USA would pay just slight-

ly more than last Tuesday's market price for Lycos stock.

Lycos, based in Waltham, Mass., has made several acquisitions in recent years and now is a network of sites that includes HotBot.com, Tripod.com and Angelfire.com, as well as its flagship Lycos.com. All together, the Lycos properties were the fourth-most popular destination on the Web, reaching

LYCOS CEO Robert J. Davis considers the USA Networks deal a "watershed event."

46.5% of all Internet users, according to Media Metrix Inc. in New York.

But integrating that existing network with Citysearch and Home Shopping Network may take time, some observers warned.

But Lycos has bolstered its position as it tries to sell more goods via its site, analysts said. "From the point of view of E-commerce, it looks like a pretty good deal," said Barry Parz, an analyst at International Data Corp. in Mountain View, Calif. "It's a good step in a long journey."

## CA Acquisition To Bolster Outsourcing Power

\$435M takeover will fill a big need

BY THOMAS HOFFMAN

Trying to bolster its small-but-growing professional services business, Computer Associates International Inc. last week made a \$435 million cash tender offer to acquire Jacksonville, Fla.-based Computer Management Sciences Inc. (CMSI).

AT A GLANCE

## Computer Management Sciences Inc.

Location: Jacksonville, Fla.

Employees: More than 900

Clients: Coca-Cola Co., Wachovia Corp., Merrill Lynch & Co., CSI Corp., Karpis Financial Services, Lockheed Aeronautical Systems Co.

1998 revenue: \$60.2 million

1998 net income: \$12.4 million

Specialties: Develops and installs applications, including object-oriented programs and relational database technologies. Provides IT outsourcing, facilities management and maintenance of legacy and client/server systems.

The deal will provide the Is-India, N.Y.-based software giant with CMSI's blue-chip list of outsourcing clients, including Coca-Cola Co. and Merrill Lynch & Co., as well as application development services that CA has lacked, said Sterling Avey, an analyst at J.P. Morgan & Co. in New York.

Unlike some systems integrators, CMSI is "quite profitable," noted Gabe Bala, an analyst at The Yankee Group in Boston.

For the calendar year 1998, CMSI raked in \$12.4 million in profit on \$90.2 million in revenue.

CA, meanwhile, pulled in \$77 million in services sales for the fourth quarter, putting it on an annualized run-rate of \$400 million including CMSI sales, Avey said.

CMSI also brings a dozen "systems outsourcing centers"—regional centers that develop and run applications for customers — to CA's Global Professional Services unit.

## DEAL HIGHLIGHTS

## Proposed Partnership

New USA/Lycos Interactive Networks Inc. deal includes:

- Lycos Inc. network, including Lycos, Tripod, Angelfire, HotBot
- Ticketmaster
- Home Shopping Network
- Internet Shopping Network/First Auction

## Ownership

port is international professional services growth. To that end, Avey said he would like to see CA make a similar acquisition in Europe.

CA intends to grow its services business "organically and by acquisition," said Sanjay Kumar, CA's president and chief operating officer.

## International Flavor

Kumar said the company intends to begin establishing international outsourcing centers within 30 days of the close of the CMSI deal.

Since losing its \$9 billion bid for Computer Sciences Corp., CA has acquired four services firms, including Aventura Systems ASA, a Norwegian systems integrator that specializes in electronic commerce.

CA said it plans to close the CMSI acquisition within 30 days, pending regulatory approval.

One of the big challenges going forward for CA is to strike a balance between its own services business and the relationships it maintains with big services partners such as Electronic Data Systems Corp. and Andersen Consulting. Avey said.

# POWER PRINTING.

## **microLaser™ 400**

Print Speed: Up to 40 pages per minute

Duty Cycle: Up to 300,000 pages per month

Paper Input: 1,500 sheets std. up to 11" x 17"; plus 3,000 sheets opt.

Interfaces: Ethernet and parallel

Opt. Interfaces: IBM 5250 Tivolis, IBM 3270 Coax, SCS, IPDS

Std. Features: Duplexing, internal hard disk drive

Year 2000 compliant

Do you need a network laser printer that races through your most demanding production applications? Meet GENICOM's microLaser 400. This powerhouse is perfect for high-volume production jobs such as month-end reports, batch printing and other mission-critical applications. Every detail of the microLaser 400 is designed for production printing,

from long-lasting consumables to large paper handling capacity.

The result? Low cost of ownership, with outstanding performance and durability.

Which is exactly what you'd expect from the company that's been building high-performance midrange printers for more than 25 years. Call GENICOM today for more information.

MARYFRAN JOHNSON

## The silent majority

**W**E COULD CALL IT *Sex, Lies and Videotape, Part Deux*. What better title for the sorry spectacle in Washington these days as the trials and tribulations of the two Bills (Clinton and Gates) unfold? President Clinton's historic impeachment trial is anticlimactic in comparison with the courtroom theater being provided by Chairman Gates' discredited witnesses and doctored videotapes.

The lead government attorney, David Boies, has shown Gates and his top execs to be, at worst, outright liars. At best, they're mighty forgetful fellows.

Yet for the CIOs and IT professionals who actually buy Microsoft products — the consumers whom antitrust law is meant to protect — there's a curiously missing factor here. Where are your voices?

Among the dozen witnesses permitted for each side, the lone IT manager on the original list got bumped in favor of a vendor witness. Microsoft is fond of trotting out supportive users at its product announcements, but in its most dire legal challenge, the company completely ignored you all.

In the hundreds of stories written about this trial since its start in October, the ultimate impact on IT buyers has been largely ignored, as well. So we've tried to fill in a

Maryfran Johnson is executive editor of Computerworld. Contact her at maryfran.johnson@computerworld.com

few of those blanks with our story this week (see page 24). Reporter Kim S. Nash talked with IT managers, lawyers and economists to identify five possible remedies the government might impose on Microsoft — and the impact each could have on your business.

The best remedy we found was this: Microsoft stops forcing PC makers into exclusionary contracts that keep competitors locked out. IT managers would gain control over which software

they buy with PC hardware, sparking true competition and the innovation that goes along with it.

The revival of the Mac and unexpected rise of the Linux freeware operating system show how eager users are for alternatives. So even if the government loses this case, you know enough now about how Microsoft uses its monopoly power to demand changes in its business practices. Raise your voices. ■

BILL LABERIS

## The Supreme Court has just redefined IT's role in business

**T**HE INTERNET and the Web have exploded onto the IT world and into our mainstream lives in a way that no one could have ever foreseen. But as the saying goes, you ain't seen nothin' yet.

Thanks to a ruling from a sharply divided U.S. Supreme Court late last month, we may well be poised at the starting line of an era of even more astounding Internet-related growth and development.

The decision upholds a 1996 Federal Communications Commission rule mandating that the local phone companies lease their local lines and network components at special rates to other providers. These phone companies heretofore had succeeded in keeping competition out of local markets, holding as their own the local connections built over the years with federally approved monopoly profits.

Now the high court has said, in essence, that these local lines belong to everyone, just like the highways we drive on. Everyone has a right to pay tolls and fees and drive on them.

Forget about what this means for increased competition in the telephone and voice-related business, because that \$100 billion U.S. business is small potatoes compared with the big enchilada. The real story here is that very high-speed Internet access — true broadband connectivity — is going to become widely available at rates comparable to what we pay for cable TV today. And it's going to happen in the next couple of years.

Still, the story here is not the affordable xDSL and cable modem network access services (and eventually wireless services) that are going to proliferate throughout the country. The story lies in the applications that these services will enable — applications that will change business and therefore IT almost overnight.

Just think of how an Internet world enabled primarily by standard analog modems has changed business already. Internet commerce is growing faster than even the most optimistic projections. Businesses such as bookselling, automobile dealing, securities trading and travel have undergone wrenching changes. Now think of what will hap-

Bill Laberis is a consultant in Holliston, Mass., and former editor in chief of Computerworld. Contact him at bill@laberis.com.

pen when Internet access speeds improve tenfold, twentyfold, even fiftyfold over conventional modem access.

Within five years, if not sooner, auto dealerships will vanish, and cars will be built to order the way Dell builds PCs today. Travel agencies will disappear, as will home real estate agents. The sprawling shopping centers we've built will begin to empty out as homes are resupplied with everything from socks to orange juice the same, automated way that Xerox is resupplied with copier components on a just-in-time basis.

And who will be charged with making all the trains run on time in this radically altered world just over the horizon? You will, because IT is going to come front and center in a way only talked about previously.

That was some court decision. ■

DAVID MOSCHELLA

## The globalists are in charge, and they love IT

**T**HE DAVOS MEN, and that much rarer species, the Davos women, met earlier this month in Davos, Switzerland. Every year, the global plutocracy convenes in this posh alpine resort to ponder our economic position and prospects. But now, thanks to the Web, even us hoi polloi can see and hear what the rich and powerful are thinking. If you didn't tune in, here's what you missed.

DAVID MOSCHELLA is an author, independent consultant and weekly columnist for Computerworld. Contact him at [dmoschella@earthlink.net](mailto:dmoschella@earthlink.net).

First, a disclaimer. This was the 29th meeting of the annual World Economic Forum. As far as I know, no one there ever predicted the end of the Cold War, the resurgence of the U.S. economy, the prolonged stagnation of Japan, the severity of the Asian contagion, the explosion of the Internet or most of the other major stories of our time.

Like most of us, the Davos people tend to assume that the future will be just a minor variation from the present. Although that approach always sounds safe and sensible, it's usually wrong.

So we can basically ignore any predictions about what will happen this year and beyond, especially since no one really said anything that couldn't be heard on Sunday morning talk shows.

That isn't meant as criticism; most of the Davos

people don't see themselves as prognosticators. They're primarily builders, leaders and managers. Therefore, what really matters is what they're thinking.

And there is nowhere better than Davos to get in touch with the current global business zeitgeist.

Ironically, the recent turmoil in Asia and Latin America has led to a remarkable degree of harmony and consensus.

Just as the collapse of socialism during the 1980s narrowed political debate down to what sort of capitalism one prefers, the failures of the Asian economic model in the 1990s have led to an unprecedented convergence around what once were described as predominantly American values.

Transparency, openness, deregulation and restructuring are now the watchwords in Europe, Japan, Brazil and elsewhere.

During the many global financial panics of last year, there were repeated calls to stem the rush to globalism, to set up Asian solutions for Asian countries and to curb corporate raiders and speculators.

But very little has actually happened. Malaysian President Mahatir Mohamad blamed the West for his country's troubles and was widely ignored.

### Notable intentions; distressing results

**I** AM WRITING in response to "Let the Boys Be Mechanics: These Girls Want to Drive" (CW, Jan. 18).

Technology, as I am sure anyone in the field would tell you, is a field composed of mechanics, not drivers. Without mechanics, what would the drivers do? They couldn't operate their car and couldn't change their own oil.

Without the aid and intellect of our technology mechanics, there would be no cell phones, beepers or Internet available for those drivers to operate. And certainly females are as welcome to the tools of the trade as males, which does not seem to be indicated at all in the article.

Instead, the girls are portrayed as mindless, gibbering mall rats — a clear stereotype that I believe the article was

trying to dispel.

I am distressed that a newspaper such as Computerworld would support such a wretched stereotype of our young women.

Jaclyn Noel  
Wayland, Mass.  
[gnk@mediasee.net](mailto:gnk@mediasee.net)

### Failings of online banking software

**I** READ "A clash of cultures" (CW, Jan. 18) about the banking industry's lack of success with online banking software. Having worked in banking, I know of the industry's cultural roadblocks to online services.

However, since I have been spoiled by Wells Fargo Bank's Web-based online banking for about three years now, I have wondered why anyone would want to load special software on their PC (which is probably not available for Macintosh) and then connect to the bank.

Meanwhile, Mexico, Korea, Thailand et al have done little that isn't in the International Monetary Fund playbook. There are a thousand plans to soften or fine-tune globalism. However, there is almost nobody who wants to withdraw from it. You don't hear much about "Asian values" anymore.

Of course, the Davos people also are big fans of technology, and thus all that harmonization can't help but expand the information technology business. It seems like everyone now agrees with the once largely American notion that technology, restructuring and stability are in fact completely intertwined concepts.

Perhaps that's why the Davos press tends to treat technology CEOs as first among the business equals, like the rock stars at Woodstock.

How long this global love-in will last is anyone's guess. We haven't reached the end of history, and national interests will inevitably diverge. The real test of globalism won't happen until the whole world goes through a prolonged recession or an equivalent crisis.

But today, the Davos people are in charge, and they're using technology to steer the world toward an unprecedented level of uniformity.

Like it or not, we're all working for the Davos people, no matter where we live. ■

## READERS' LETTERS

Personally, I prefer to connect to my Internet service provider and do all my online services over the Internet with one connection, rather than having to dial up to separate locations for each service. It appears that online banking (with Wells Fargo being the rare exception) is not only behind times, but a software vendor such as Vertigo should have known better.

Gordon Heshkin

## IT: Big pressures, bigger rewards

**T**HIS IS A GOLDEN AGE for IT — so stop whining. Hey, am I in a time warp here? Must be. I've just gotten a peek at some qualitative research a client conducted with more than 100 U.S. CIOs. In it, I read comments like these: "This business would be great if it weren't for end users. They screw up everything." "My CEO doesn't understand me or know what I do." "No one knows how complex this job is." "I train my people and then they leave."

Folks, these are the same beefs I heard 25 years ago when I interviewed MIS managers about departments using minicomputers and terminals

that ran Cobol programs. I heard them again 15 years ago when PCs and LANs were pouring into companies through every door and window. Now I hear them as we cross into the era of Internet computing.

I know the environment and the stakes have changed. Almost every application is now considered mission-critical. For instance, in an International Data Corp. (IDC) survey last year on Win-

dows NT adoption, large companies said 42% of their applications were mission-critical. Welcome to the fishbowl.

And, yes, there aren't enough people to do the work. Again, according to IDC's forecast model, this year alone there will be more than 100,000 professional jobs that go unfilled in IT shops. But then, 25 years ago, we had the same gnashing of teeth about the shortage of Cobol programmers.

Do you think this environment is any easier for the marketing, sales, finance and management executives in your company? They're in the same fishbowl you are, facing the same mergers and acquisitions and running as much risk of being downsized. Even worse, in the new environment, they find their careers held hostage by technologies they don't understand, managed by people they often don't understand.

Besides, this time around, IT professionals have something to go along with all that pressure: the chance for fame and glory.

Twenty-five years ago, the most career-threatening event an MIS manager faced was a main-frame operating system conversion. If it was successful? Ho-hum. With PC/LAN implementations 15 years ago, the most career-threatening event was the switch to Windows. If that was successful? People got used to mice, and the company ran 1% better.

Today, if you can deal with these technology shifts, what are the potential rewards? Your company blasts past the competition, makes 10% more profit, gains 50% in stock market valuation and puts a stake in the ground for the next 20 years. And everyone knows it couldn't be done without IT! (End users and CEOs have learned at least that much in the past 25 years.)

So everything is mission-critical? Then make sure it all works. Not enough staff? Outsource. End users causing problems? Upgrade them. CEOs in the dark? Hire people who understand marketing and put them in charge of internal public relations.

This is not a chance to be missed. There are companies whose CEOs and end-user managers are singing the praises of IT. And they're not just high-tech leaders such as Federal Express, but also old-line, cost-driven companies like Dow Chemical.

Carpe diem. We won't pass this way again. ■

JOHN CAMPBELL

## The many flaws of Java should make you think twice

**A**S A 30-YEAR VETERAN software engineer, I wasn't looking forward to learning yet another language as well as a whole new lexicon associated with it.

But when I took my first Java course, I was pleasantly surprised: It really was

enough like C and C++ that I could get the hang of it, and I liked the object-oriented perspective and some of the terminology. The method library was huge; it seemed that you hardly had to write any code at all. Writing simple Java programs was almost as easy as operating a toaster.

But some things made me uneasy about the Java language. On the technical side, calling native methods written in C or C++ is absurdly difficult. The lack of destructors is at best odd because they're necessary to avoid losing other resources — sockets, file handles, pipes — when the structures pointing to them are deallocated by the garbage collector.

More important for companies considering basing their operations in part on Java is what Sun's marketing calls its "total break" from C and C++. As a practical matter, Java could have been made to be relatively compatible and to allow easy

communications with those languages. That would have let organizations maintain and enhance their substantial software investments. Instead, Sun seems intent on obsolescing virtually the entire world's code base, referring to it as "legacy" software.

Worse, there's no moderating force. Last year, Sun persuaded a majority of the American National Standards Institute (ANSI) language committee to approve Java as a standard language but to let Sun continue as sole proprietor and designer. Previously, any language that was approved as a standard was then maintained and modified only by the majority of the ANSI committee for that language. In the case of Java, Sun retains proprietary possession of the language, and the ANSI committee becomes a rubber stamp for Sun.

In Java development projects, I have found that overabstraction and overobjectification seem to complicate very simple problems. The whole Java/Common Object Request Broker Architecture mind-set erects barriers to thinking about simple problems in simple terms.

As a direct consequence of that mind-set, and of the resultant lack of attention to the data being manipulated, designs are overly complex, and performance is poor. Debugging errant Java processes and threads is a nightmare, a throw-back to spraying batch Fortran programs with Print statements. Because of security and performance considerations, Java applets on Web sites have become relatively rare, and Java isn't even allowed through some corporate firewalls.

Despite packaging Java as a neutral language and platform, Sun is really pursuing a common industry tactic for garnering market share. All the big players in the computer market — Microsoft, IBM, the former Digital, Hewlett-Packard, Sun and so on — have done it in the past, with software or hardware that's not-quite-compatible with what is standard. The idea is that you "lock in" customers by portraying the incompatibilities as gigantic advantages, locking out the competition.

The Java language is a masterful attempt to move programmers and organizations into the Sun orbit, into a proprietary software architecture and platform that is "open" in name only, from the "Windows monopoly" to the "Java/Java virtual machine monopoly," which comprises software that, coincidentally runs best on Sun hardware using a Sun operating system.

I believe that for Sun, wide acceptance of Java and the Java virtual machine is a life-or-death issue because the company's hardware and operating system are being eclipsed by faster Intel and AMD chips and by the Linux operating system. So Sun's motives are understandable. But the method is underhanded.

I urge organizations to consider whether they want their software infrastructure to depend on an essentially proprietary software architecture owned and licensed by a single company, with all the other problems I've mentioned. I personally would think twice before making such a decision. You should, too. ■

**sing** your praises.

# CA's Acquisition Of No Matter How

## For Clients Of Both Companies, It's The Best Of Both Worlds.

Big but fast. Small but global. Innovative but safe. This merger offers clients all kinds of benefits that used to be mutually exclusive. Until now, clients always had to choose between large, safe, established software partners and small, leading-edge, up-and-coming developers. Each had its advantages and disadvantages. Everything was a compromise. But by combining the experience and worldwide resources of a five billion-dollar software company with the talent, specialization, and proven expertise of an up-and-coming applications developer, this merger will create something truly unique.

The best of both worlds.

## CMSI Offers Proven Development Methodologies And Extensive Experience With Strategic Re-Engineering.

CMSI specializes in software application development, systems integration, database technology services, client/server solutions, systems outsourcing, strategic information technology consulting, and systems support/maintenance.

Focusing on the information processing needs of Fortune 1000 companies and state and local governments, CMSI is an expert at the creation, manipulation, and integration of software applications, as well as IT outsourcing, facilities management, and maintenance of legacy and client/server computer systems. With a 16-year track record of success, CMSI

has attracted a prestigious list of clients, including Coca-Cola, CSX Corporation, Kemper Financial Services, Lockheed Aeronautical Systems Company, Merrill Lynch, and Wachovia Bank.

The key to the success of CMSI is their staff of highly-skilled, experienced professionals who have extensive, wide-ranging expertise in Internet development, e-commerce, business process re-engineering, strategy planning, evolutionary downsizing, rapid application development (RAD), object oriented databases, vendor software evaluation, and other key technology areas.

### Systems Outsourcing Centers (SOCs)

SOC: 30-40 Development Groups  
Corporate-wide resources on call  
for specific solutions

In response to clients' needs, CMSI developed a national network of innovative Systems Outsourcing Centers. These "SOCs" enable the company to maintain a repository of re-usable software applications, code strings, and components that ultimately reduce the time and effort needed during the initial development phase of a project. Each SOC is networked to provide CMSI with the ability to staff projects from any SOC or branch location for concurrent development. They also offer on-site consultant and

customer training centers that provide complete staging capability to train users of a newly-completed system prior to deployment at the customer site.

CMSI has also created a proprietary Evolution Methodology, which is an integrated set of stages, tasks, work products, techniques, tools, and project management guidelines that provide a standard approach for planning, development, and maintenance. This helps CMSI deliver more productive, cost-efficient solutions in less time than the competition.

## CA Is The World's Leading Business Software Company With A Client List That Includes 99% Of The Fortune 500.

It's very difficult to find a company that doesn't use CA software.

With tens of thousands of clients in more than 100 countries around the world, Computer Associates is the world leader in mission-critical business computing. A staff of 13,000 employees provides software, support, and integration services for the world's leading companies, governments, and non-profit institutions.

With a product line of more than 500 different solutions, CA makes more kinds of software for more kinds of computers than anyone else in the world. CA's best-known product, Unicenter TNG®, is a billion-dollar product that has become the industry standard for enterprise management.

## CMSI Will Join CA's Fast- Growing Global Professional Services™ Division.

Doubling in size in just the past year, CA's Global Professional Services Division is growing meteorically both through organic growth and through

# CMSI Is Great News You Look At It.

strategic acquisitions like this one.

CMSI will become part of CA Global Professional Services (GPS) in accordance with GPS' growth strategy of implementing

leading-edge business solutions.

**COMPUTER ASSOCIATES**

Global Professional Services™

GPS offers a broad spectrum of IT services in dozens of disciplines, including infrastructure management, application development and integration, Y2K compliance services, asset management, desk-side support, and end-user productivity.

Services range from consulting, to implementation, to comprehensive outsourcing and facilities management.

## CA And CMSI Product & Service Offerings Complement Each Other With Virtually No Overlap.

CMSI offers services CA doesn't offer. CA offers software solutions CMSI doesn't have. By combining the two product and service offerings, the result is a more comprehensive, wide-ranging offering of both products and services for clients to choose from. Because there is virtually no overlap between the two companies, there is tremendous synergy and growth potential between the products of CA and the services of CMSI.

## Innovative, Leading-Edge Applications Backed Up With The Industry's Best Service And Support.

CMSI builds some of the most innovative applications and client-server solutions in the industry. Now these leading-edge solutions will come fully-backed with all the resources of CA's award-winning service and support. Around the clock and around the world, CA provides mission-critical support that is unmatched. This additional benefit can only enhance and strengthen all of CMSI's applications.

## An Unprecedented Opportunity For CA's Jasmine® And Ingres® Technology.

CA has developed some of the most advanced database and object technology software in the world. Now with CMSI's expertise and experience, this software can be exploited to its fullest. Clients will be able to choose from one source

not only the advanced software that they need to develop the applications of tomorrow, but the expert developers and consulting partner that they need to build these applications.

## CA And CMSI Are The Perfect Partners To Deliver Comprehensive e-Commerce Solutions.

CA offers a broad range of software that can make e-commerce viable. With the help of CMSI, CA will

be able to leverage this software into comprehensive solutions for clients.

Some vendors offer pieces of the e-commerce puzzle, CA and CMSI will be the only partners that offer everything you need to make e-commerce a reality.

## An Ideal Fit In Terms Of Technical Strengths, Business Vision, And Corporate Culture.

"Our partnership with CMSI extends our continuing strategy of building GPS through highly-focused acquisitions that complement CA's core competencies and that address the most critical requirements of today's global enterprise," says CA President and COO Sanjay Kumar. "CMSI's proven development

methodologies and extensive experience with strategic re-engineering make

them an ideal addition to GPS's already formidable technology and business resources. They will provide a particularly powerful vehicle for greater penetration of CA's Jasmine and Ingres technologies into the upper echelons of the corporate application development market space."

"This is a very exciting time to be joining the CA family," says CMSI Chairman and CEO Jerry W. Davis. "Our two companies have an ideal fit in terms of technical strengths, business vision, and corporate culture. We're especially enthusiastic about the contributions this partnership will allow us to make globally in high-growth areas such as Internet commerce applications and multimedia content delivery."

## Members Abandon Help Desk Institute

BY JULIA KING

The Help Desk Institute (HDI) is supposed to provide its dues-paying members with

newsletters, updated information about industry best practices and ongoing support for local chapters.

Yet Eugene Ball, president of the HDI chapter in Research Triangle Park, N.C., can't recall the last time he received any of

that from the San Francisco-based professional association.

Nor can Margo Fullilove, president of the 700-member Chicago chapter. "Over the years, the support and interaction we have gotten from HDI

has eroded," Fullilove said. "We feel like we're being used as a mailing list and we're not getting a good deal of support back." The Chicago chapter is considering joining one of two new groups that are forming to represent help desk workers.

Still other HDI chapters — including one in Vancouver, British Columbia — already have severed ties with HDI.

What Vancouver would like from any new association is "an avenue for networking and an ethical company with current information, industry standards and benchmarking," said Karen Yuen, president of the now-independent chapter that calls itself Help Desk B.C.

One of the new groups, Atlanta-based Help Desk 2000, which offers education and certification programs, aims to sign 2,000 new members by next year, said Jennifer Cress, executive director.

Among other things, members will participate in monthly teleconference discussions and have access to a members-only Web site. Help Desk 2000 also hired Pete McGarahan, whom HDI fired last October as executive director apparently because of the group's insufficient finances. McGarahan now is traveling the country to recruit members for the new organization — as is Ivy Meadors, founder of the new, nonprofit Help Desk Professionals Association (HDPAs).

Meadors described HDIPA as "an E-commerce-based virtual business." Member benefits will include access to an online database as well as tutorials.

"People in the industry are already submitting content for free," Meadors said. "We've also been receiving between 300 and 400 E-mails a day and have had 175 volunteers the first week."

HDI also has big plans, according to Bill Rose, managing director of the Ziff-Davis Association, which has owned HDI since 1992. Although he declined to be specific, Rose said the group plans to announce "several innovative membership deliverables" at next month's Support Server Conference & Expo, a Ziff-Davis event in Washington. ■

# TRACKING CHANGES A MUST IN ERP PROJECTS

*Business users sometimes fail to realize importance*

BY CRAIG STROMAN

**F**OR ERP project managers, instilling a sense of discipline among workers who will use the applications can be a make-or-break necessity. And controlling software modifications is a prime example.

Setting guidelines for employees who are involved in tailoring packaged software to fit a company's unique business needs is only the beginning, said several managers involved in rollouts of enterprise resource planning (ERP) systems. The bigger challenge is persuading workers facing tight project schedules not to cut corners in documenting the changes they make.

That process can be complicated by the fact that a disproportionate number of business users make up most ERP project teams. Unlike those with more information technology experience, these users may not realize the importance of keeping track of software modifications, the managers said.

To many workers, change manage-

ment "looks bureaucratic," said Gary Peteritis, SAP project manager at Hoechst Marion Roussel Inc. "You can dictate it, mandate it and legislate it, but that's just like the rules of the road. Just because there are speed limits doesn't mean people will pay attention to them."

## Don't Get Lost

Convincing ERP team members of the need to document changes slavishly is a must, "or you never really know what you've installed," Peteritis said. That could cause problems with things such as upgrading the software and tying it to other applications (see chart).

Hoechst Marion Roussel, a Kansas City, Mo.-based pharmaceutical maker, went live with SAP AG's R/3 applications last month. During the rollout, Peteritis said, he and other managers tried to "touch each person individually to make [the importance of change management] stick." That included showing workers examples of how government regulations require tight doc-

umentation of the software used in the company's manufacturing operations.

Algonia Steel Inc., a steelmaker in Sault Ste. Marie, Ontario, faced similar change-management challenges after it began installing PeopleSoft Inc.'s applications (CW, Feb. 1).

Laying out rules isn't hard, said Gary Disano, Algonia's project manager. The big job, he said, is "making sure people grasp the concept of why you're setting them up and what the implications of not following them are."

To help with that, even the business users involved in the project were sent to PeopleSoft's technical training classes, Disano said.

Algonia also borrowed the software installation methodology of a consulting firm that was hired to work on the project.

For IT workers assigned to a People-

Soft rollout at The MacManus Group, the importance of documenting software changes "is part of their indoctrination to the project team," said Jim Dileo, senior vice president of worldwide IT at the New York-based advertising and public relations firm.

To further encourage developers to "take more care on the front end," Dileo said he also requires them to help support the software after it's installed. ■

### Control Yourself

Closely managing and documenting changes to ERP software can help users:

- AVOID** problems when the applications are upgraded
- GUARD** against common business processes being compromised
- KEEP** ERP systems synchronized with other applications
- STAY** eligible for vendor-supplied technical support
- PROVE** compliance with government regulatory requirements

## Analysts: Plan for Handhelds

*Single platform, product 'shortlist' top advice list*

BY MATT HAMBLIN

Analysts have plenty of tips to help IT staffs manage handheld computers and smart phones, as usage of such devices is expected to quadruple by 2002 and infiltrate corporations.

Many information technology managers admit they aren't prepared to support handhelds (CW, Feb. 8). So analysts are at the ready to help them decide some basic issues, such as whether they should standardize on a single platform or budget funds to synchronize setup. Experts' recommendations vary.

In a research note, analyst Ken Dulaney at Gartner Group Inc. in Stamford, Conn., urged firms to create a product "shortlist" for users to buy from. But IT "should never expect that a single personal digital assistant model will ever be adopted," he warned.

Analyst Gerry Purdy at Mobile Insights Inc. in Mountain View, Calif.,

urged firms to settle on one platform by the year 2000. He said he believes that Microsoft Corp.'s Windows CE will be the best way to access company networks.

Forrester Group Inc. in Cambridge, Mass., advises IT staffers to tell business departments to buy devices that will run custom applications, since that's one area where they probably can gain a competitive advantage.

As for support, a report by Forrester analyst Matthew Nordan suggests moving synchronization functions from users' desktops to back-end servers to provide more security and minimize version control problems. Such technology should be available by midyear from Puma Technology Inc. in San Jose, Calif., Forrester said.

Setting up synchronization will cost about \$50 per user, the report said, which can be cost-justified by pointing out that a tech support visit for one device without a sync service program would cost about the same.

Gartner urges standardizing on a synchronization product to support a variety of devices. ■

## Illinois Prisons Upgrade Database to Tighten Reins on Cons

BY STEWART DECK

Illinois prisons are full of inmates. Their files are packed with information and photos used by wardens to place new arrivals safely and by investigators to solve prisoner crimes more speedily.

The information is continually fed into a database that is growing so quickly it will need a database system upgrade this spring.

"Some people say the inmates' favorite pastime is to sue us, so we need all these details and need to make sure we cover every occurrence," said Scott Lovdahl, a data administrator at the Department of Corrections in Springfield, Ill.

The system, with a centralized Sybase Inc. database and 26 smaller satellite Sybase databases, holds detailed information on the state's 40,000 inmates that can help staff decide which cell would be safe for a particular prisoner, for example. Each record includes the inmate's criminal background, religion, any gang affiliations, job assignments and history of cell moves.

Fewer confrontations mean less stress on the guards and inmates, fewer worker compensation claims, fewer injuries and less dangerous facilities.

### Earlier Use

"This system has sometimes cut days off of our investigations," said Lt. Tom Carroway, an internal security investigator at the Menard Correctional Facility in Menard, Ill. "This lets us quickly look up an inmate's past history and immediately get up-to-date photos of them we can print out and use for identification purposes."

Bill Taylor, a development specialist at the American Correctional Association, a professional association in Lanham, Md., said several states use some form of inmate tracking systems like that in Illinois because "they can be an excellent tool for managing prison populations and decreasing inmate-on-inmate violence."

"The nature of the business is maintaining control of people and events, and that means knowing the relevant facts in advance if you can, or immediately when a situation arises," said David Lanerman, manager of information services at

the Department of Corrections.

On the technical side, the stress of updating so much data is eased by the fact that

each prison runs its own smaller subdatabase. The main database replicates 26 subsets of the data — one for each of the

state's correctional facilities — "which speeds everything up immeasurably," Lovdahl said.

Still, the department will

add Sybase's Adaptive Server Enterprise database and Sybase Replication Server to the system this spring to better handle the crushing load of digital photos — currently 230,000 and growing. ■

*12 new branch offices.*

*Three business-critical applications to deploy.*

*35 new employees to train.*

## Hartford Hospital Seeks Competitive Edge With \$1.7M Net

BY BARR COLE-SOMOLSKI

At a time when most hospitals are throwing the bulk of their information technology re-

sources at year 2000 projects, Hartford Hospital is investing big in a high-speed network.

The 800-bed Connecticut fa-

cility is betting that the applications it will run on the \$1.7 million Asynchronous Transfer Mode network will make it

stand out in a competitive market and let it share resources with nearby affiliates.

The new 3Com Corp. net-

work, about 100 times faster than the old Ethernet network, will lead to speedier diagnoses, said Alan Hofmann, director of network services. A medical records imaging system from Sungard Healthcare in Rockville, Md., will automatically distribute patients' medical histories to physicians, nurses and administrators. A picture archival application will let radiologists quickly share X-rays. The hospital also plans to install videoconferencing to let physicians at remote offices and affiliated hospitals discuss treatment strategies.

The hospital hasn't selected vendors for the archiving and videoconferencing.

Another initiative involves putting patient monitoring information on the network, so doctors can view a patient's vital signs remotely with a delay of about 30 seconds.

Because the network extends to two affiliated hospitals and more than 30 remote clinics, the health care system will be better able to share its doctors and facilities. "As we expand our services across the state, we need to ensure that critical data moves rapidly among medical teams and across sites," Hofmann said.

Many hospitals have outgrown their networks as they move toward use of electronic patient records and digital medical devices. In a survey last year of 1,600 members of the Chicago-based Healthcare Information and Management Systems Society, 34% of respondents said they were using telemedicine applications similar to those at Hartford.

Hartford Hospital appears to be slightly ahead of at least one of its main competitors, Yale-New Haven Medical Center.

Keo Best, a spokesman for Yale-New Haven, said his hospital has digital imaging throughout its main facility. And it wants to link the diagnostic systems at each of its facilities, which include Yale Medical School and a children's hospital, to make sharing information easier.

Many hospitals have tight IT budgets, and investment in new projects has slowed because of year 2000 work. But some begin projects to help them reach outside their coverage areas, said Larry Powlan, an analyst at Dorensfest & Associates, a health care IT consultancy in Chicago. ▀

No  
problem.

With Citrix server-based computing software, it's easier than ever to manage branch offices, deploy new applications and train users—all by yourself.

It's true! Citrix® MetaFrame® and WinFrame® are the preferred

application deployment solutions for thousands of companies

wanting to extend access to business-critical Windows®-based

applications while reducing the total cost of application ownership.

Fast deployment capabilities get more users the applications they need every day.

With Citrix, all vital applications can be deployed in minutes from one location. No more time-consuming installations on your various client devices. Plus, you no longer have to deal with version control issues, multiple system configurations or data replication. This way, you're free to provide top-quality deployment, management and support for your entire organization.

Single-point control means you can do your job easier—without leaving your desk.

MetaFrame and WinFrame give administrators powerful management and scalability tools they can use right from their desktop. Without leaving their chairs, they can support thousands of users, monitor application access, troubleshoot problems, train end users and install software updates.

See what 77% of Fortune 100 companies already know—Citrix works!

Discover for yourself how thousands of leading companies are solving the problems of enterprise-wide application deployment and increasing productivity with Citrix MetaFrame and WinFrame.

To learn how Citrix can help you, call 888-564-7630 or visit [www.citrix.com/driver1](http://www.citrix.com/driver1) for a FREE Test Drive CD-ROM.

# COUPON CLIPPING HITS THE WEB — BIG-TIME

Consumers register in droves to receive real-world discounts from national stores

BY SHARON MACWILLIS

**A** LONG WITH toys books and music, one of the most popular shopping categories on the Internet in December was ... coupons.

Coolsavings.com and Valupage.com cracked Media Matrix Inc.'s top 15 shopping sites for December, garnering more than 18 million unique visitors. Each site offers discounts on goods that are bought in the brick-and-mortar world.

"It seems to be an extremely efficient way to reach people," said Jon Rice, vice president of marketing at CEC Entertainment Inc. in Irving, Texas, which operates the Chuck E. Cheese restaurant chain. "When we started out, it was purely an experiment. We've hung in there because it's continued to grow."

Rice didn't discuss specific

numbers but said the cost per coupon redeemed from Coolsavings.com is "very attractive for us" compared with coupons by mail or newspaper inserts. Other offers on a recent visit included 20% off one item at Toys R Us and \$1,000 off a Chrysler Sebring.

Coolsavings Inc. now has more than 13 million registered households, and revenue has grown twofold from a year ago, said Chairman and CEO Steven Golden. The privately held company, which doesn't release financial figures, has signed up about 60 national accounts, including H&R Block Inc., Kmart Inc. and Kids R Us. "We look to break even by the end of this year," he said.

H&R Block had double-digit (that is, more than 10) redemptions of downloaded coupons last year, according to Paul Marran, creative director for Brand Dialog, a division of Young & Rubicam in Chicago

COOLSAVINGS CEO STEVEN GOLDEN, pictured here with the company logo, says revenue has grown twofold in a year

that oversees the tax-preparing firm's online advertising campaign. Traditional paper coupons might have a 2% redemption rate, he said. And a contest on the site has already

tripled the number of entries compared with last year, well short of prime tax season.

Meanwhile, Supermarkets Online Inc., which runs two coupon sites including Valu-

page, said its traffic is soaring. The company handled 645,000 different visitors during one recent week. The Valupage site lets consumers print out a bar-coded shopping list good for discounts at 9,000 participating supermarkets.

Ken Cassar, an analyst at Jupiter Communications Inc. of New York, said he doesn't believe coupon sites should be categorized as "Internet shopping" because they aren't conducting transactions. However, no matter where they're classified, Cassar said, "It's a burgeoning category."

There are others besides the category leaders. A major player in direct-mail coupons, Val-Pak Direct Marketing Systems Inc. in Largo Fla., is on the Internet ([www.vulpak.com](http://www.vulpak.com)); another site, FreeShop International Inc. ([www.freeshop.com](http://www.freeshop.com)) in St. Cloud, Minn., posts free offers from publishers and manufacturers. Others are in the works.

Coupon delivery costs are certainly cheaper over the Internet than by mail or newspaper, Cassar said. But in the current, highly competitive online environment, marketing and advertising costs to acquire new customers can be substantial.

In the short run, he noted, "oftentimes [Web] promotional costs end up substituting for physical-world costs." ■

## Government To Compile E-Commerce Stats

FTC emphasizes consumer interests

BY JAMES MCGILL

The federal government will begin separately tracking and publishing statistics about online shopping instead of incorporating them in catalog sales, the Department of Commerce has announced.

Commerce Secretary William Daley and Federal Trade Commission Chairman Robert Pitofsky said the boom in online business makes it more important than ever to protect the interests of Internet shoppers.

Daley estimated that consumers spent \$9 billion online last year, a figure he predicted

would increase to \$30 billion next year.

The proportion of retailers selling goods on the Internet

tripled in a single year, from 12% in 1997 to 39% last year, according to Commerce Department estimates.

Will allow albums to be downloaded

BY TOM DIERBERG

Some online music lovers in San Diego will soon be able to pay for and download full-length albums over the Internet and transfer them to CD or tape.

A six-month pilot program — a joint initiative of IBM

and five top recording firms — will start this spring. The pilot will involve 1,000 cable TV subscribers who access the Internet via cable modems, the companies said in a statement.

IBM — along with BMG Entertainment, EMI Recorded Music, Sony Music Entertainment, Universal Music Group and Warner Music Group — said the highly secure system would give consumers fast and

New figures that break out Internet sales as a separate entity will be available by the middle of next year for 1998 and 1999, Daley said. ■

Nicolaï writes for the EDG News Service in San Francisco.

## IBM Teams With Music Makers for Net Test

easy access to music while protecting the legal rights of those who produce albums.

According to the companies, downloading a 60-minute album will take less than 10 minutes via cable modem.

The pilot program was set up so that IBM and the music companies could gauge public reaction to such a system and to test a wide range of technical issues, such as compression and network delivery. ■

# FOOD FIRMS' FINGERS CROSSED

Supplier readiness is the big unknown, but no shortages foreseen

BY STACY COLLETT

**P**ACKAGED-FOOD manufacturers are well on their way to year 2000 compliance, with 95% of Grocery Manufacturers of America members saying they will beat the Jan. 1 deadline. But industry officials concede there are forces beyond their control that threaten a smooth transition to the new millennium.

For example, industry heavyweights General Mills Inc., Kraft Foods Inc., Nestle SA and Cargill Inc. have manufacturing plants worldwide and rely on developing nations for core ingredients like sugar and cocoa. A failed system in any region could create a domino effect.

"The food industry is part of a very complex supply chain;

## JUST THE FACTS

### Y2K Food Facts by the Numbers:

**\$1.8B** Total being spent by the packaged-food industry on fixing the year 2000 problem

**\$27M** Average being spent on Y2K by most food processors/packagers

**\$100M** Average being spent by larger, multinational food producers

Base: Survey of 57 members of the Grocery Manufacturers of America

raw products, distributors, wholesalers, supermarkets," said Lisa McCue, a spokeswoman for the 130-member Grocery Manufacturers of America. "There is concern that other links in the supply chain are not ready."

Without industry-wide regulations, food companies must rely on suppliers' assurances that they will be year 2000-compliant. And government agencies outside North America generally are less willing to provide information about their readiness.

Industry watchers said equipment on the plant floor remains the food industry's Achilles' heel. While orders can be taken by phone or fax and shipping arrangements

handled manually in the event of a year 2000 glitch, there's no way to work around equipment failures on the food-processing line.

To avert disaster, Minneapolis-based General Mills hired Raytheon Corp. to take a fine-toothed comb through every one of the 40 locations where its food products are made. Raytheon is analyzing the year 2000 readiness of its key suppliers. Another 300 suppliers have been polled through interviews and surveys.

The surveys offer little concrete evidence of year 2000 compliance, according to analysts, but companies hope the surveys will buffer them from liability down the road.

Kraft also is taking steps to "reasonably ascertain" the readiness of its critical suppliers through questionnaires and

the like, according to a Securities and Exchange Commission filing. It plans to spend \$550 million on its year 2000 effort and another \$150 million to replace equipment.

Food manufacturers already have spent the majority of their predicted \$1.8 billion on year 2000 work. Most will spend 12.8% of this year's information technology budgets on achieving year 2000 compliance — about half of last year's total of 24.8% — as they wrap up projects, according to an upcoming report by market research firm Dataquest.

Industry officials foresee no food shortages in 2000 and assure consumers there's no need to hoard their favorite cereal. Food producers have no plans to stockpile their products but will respond to any increase in market demand beginning in July or August. ■

## Official: Russia's Call for Help Is Actually a Good Sign

Shows that country takes Y2K seriously

On Feb. 3, a Russian official put the cost of Russia's year 2000 fixes at \$3 billion — six times the original estimate — and asked for aid and advice from the U.S. and NATO. In an interview conducted via E-mail, Computerworld reporter Matt Hamblen asked John A. Kunkin, chairman of the President's Council on Year 2000 Conversion, to react.

**Q:** What's the Clinton administration's reaction to the request for year 2000 assistance?

**A:** I am not aware of a formal request at this time. We have been working with the Russians through the Defense Department and others to increase their awareness and activities and have been providing technical assistance.

**Q:** Are you surprised by the request?

**A:** I'm pleased that they have moved away from their earlier position that the year 2000 problem would not affect them and they'd wait to see if any system failed.

**Q:** Does this Russian acknowledgment imply that problems and costs worldwide are going to be greater than expected?

**A:** We've been talking about the risks of international failures for the past year. This is why we worked to organize the meeting at the UN in December of senior year 2000 executives from 120 countries and why we've provided a senior U.S. executive to help organize and direct a new International Y2K Cooperation Center, intended to promote cooperation, action and information-sharing among nations. We've also organized, through the Coast Guard, a meeting of major international shipping organizations in London the first week of March.

**Q:** Can the U.S. help other

**PRESIDENT'S COUNCIL** Chairman John Kunkin says he's pleased Russia is aware of its Y2K woes

countries such as China if it helps Russia?

**A:** We've provided \$12 million to the World Bank to continue its support of international year 2000 activities, along with the activities noted above.

**Q:** Would you describe these tremendously increased costs as a grave development?

**A:** We have for months been focusing on the challenges the world faces with the Y2K problem. This [Russian] report is simply another indication of the importance of the problem. It looks "grave" only if it's the first time you consider the challenges other countries are facing. ■

## Philippines Making Y2K Move

BY MELBA JEAN M. VALDEZ

Two bills filed in the Philippine congress seek to grant tax incentives to companies that undertake year 2000 conversion projects and make it illegal to build, import or sell non-compliant systems.

The bills also include incentives for user companies trying to fix their own year 2000 problems. Those could include tax deductions for expenses incurred on year 2000-related projects or exemption from any import duties on equipment needed for such projects.

The bills closely define criteria for both year 2000 compliance and provide avenues through which consumers can lodge formal complaints. They also expressly ban dumping any noncompliant consumer product or declaring a product is compliant without testing and accreditation. If the bills are made law, those flouting them can be fined and/or jailed for up to six years.

Proponents said the bills could be passed in as little as two months. ■

Valdez writes for Computerworld Philippines.

CAREER COUNSELOR LINA FAFARD

# Hate your job? Then get out!

**T**HINK ALL YOUR colleagues are jumping ship just for fat paychecks and sign-on bonuses? Think again. The No. 1 reason people change positions is because they hate their boss — and that includes information technology professionals.

And I have more news for you — if you find yourself in those ranks, your boss probably hates you, too! That makes it very difficult to do a good job, no matter how hard you try.

Are you alienating your family? Is even the dog refusing to play with you because you're so depressed? Please, do everyone in your professional sphere a favor — including yourself — and leave!

In case you haven't noticed, you're in the hottest job market in history and, yes, the grass can be much greener on the other side.

Dream for a moment about what the greatest job in the world would be for you. (Time's up.) Now, what's your greatest Plan B job that you can actually do? (Hey, none of us really gets our dream job.)

Perhaps you hate your job because you aren't good at it, or at least don't feel you're good at it. Ask yourself if you're working for a company that overworks you, underappreciates you — or both.

Then ask if that situation can be fixed, if the effort is worth it or if the only way out is to leave.

## Leave Your Baggage Behind

**Caution:** Also ask yourself if your attitude is so bad that even if you left, it would follow you. You don't want to bring emotional baggage to the next IT job.

Make sure you aren't focusing only on the negative — take the positive into consideration, too. If it's truly a grim, no-win situation, then for goodness' sake, get out now.

Make a list of what you need

by when in a job, then explore the possibility of doing so in your existing company. If that job doesn't exist in your company, you may want to contact a recruiter and/or search the Internet to find out about the job you want.

## Play the Match Game

Factors to consider include the following: job duties, compensation, access to new technologies training, location of those types of jobs, the types of companies, future career paths and so on. Match them against your current job and a job you would consider.

Many people want the ideal job but aren't willing to do the work it takes to get there. If there are specific educational requirements necessary to secure your ideal job, don't hesitate — enroll.

Remember, getting education or training takes time. The sooner you start the process, the sooner you can change your life.

To grow professionally and personally, you must move out of your comfort zone and learn something new.

It's very simple to get the job you want. It could be as easy as

listening to a second-language series of tapes during your commute. Perhaps taking a class in public speaking to improve your presentation skills is all you need. Maybe your dream job is just one more technical class away. Discover what you're lacking (they can even ask you "ex," if his or her advice will help), and fix it.

## Speak Up or Get Passed Over

If you're any good, your technical skills are in demand. Meet with your supervisor to go over your career goals.

Let him know that it's time for a change. During the meeting, find out what it's going to take to get the next promotion or enable you to do the job you really want.

Don't complain about your current job. Keep the focus on the future and getting the desired position. Determine what skills are needed in that job — not just IT skills, but business, management and communication skills.

Find out what obstacles, if any, your boss thinks you need to overcome to recommend you for the job you want. Although that could be hard to take if you hate each other, it also could be good, honest feedback. At the very least, it will be an exercise in self-control.

If that job is in your immediate department, put an agreement in place that if and when you overcome those particular obstacles, you will get the desired position.

If that new job isn't in your department, tell your boss that you would like to pursue opportunities outside of your department.

Next, contact the human resources department to explain your career desires, to describe the new job you really want and to ask for help in obtaining that position.

Offer a transition plan. Volunteer to find, help and train the person who will replace you prior to moving into your desired position (within reason).

Make yourself available for interviewing replacement candidates and answering transition questions. Agree to a time frame for the transition plan.

Don't let the stress of getting your work accomplished take precedence over getting the job you really want. Stop.

## On Your Way Out:

1. Research your desired job duty requirements.
2. Make a list of why you would be good at the job and happy doing it.
3. Prepare and commit to do what it takes to get there.
4. Find out where the job is; look internally first.
5. Create an exit and entrance plan.
6. Share your career desires with your boss.
7. Plan your transition to your new, great job.
8. Work your plan.
9. Celebrate!
10. Do it again (continue the process throughout your career).

stewing in it. Take the necessary action to get the job you'll love.

No one is going to knock on your cubicle and hand you your dream job, a raise, a promotion and a great boss. You have to make it happen and you can!

Hurry up; your dream job is waiting for you, and it's behind schedule. ■

WE JUST GAVE 20  
OF THE WORLD'S  
LARGEST COMPANIES  
VERY DISTURBING NEWS.

*And they couldn't be happier.*

Discover the truth about your Y2K progress.  
With TransMillennium QUICKcheck™.

Thousands of companies are facing an uncomfortable moment of truth as they start testing millions of lines of renovated Year 2000 code. Companies using QUICKcheck™ have found that, on average, 11% of renovated programs are still not Y2K ready. Which means testing will be slower, confidence lower, and the chances of meeting the Year 2000 deadline even slimmer.

Fortunately, there's a way to avoid these unpleasant surprises. Call

Cap Gemini America for an independent appraisal of your MVS COBOL applications before or after Y2K testing.

In just two weeks, we can show you precisely where we found overlooked Y2K errors, which can help you accelerate testing. This will give you a greater chance of meeting your Y2K deadline, and help in demonstrating due diligence.

The truth about your Y2K progress may hurt at first. But the end result should make you very happy indeed.

For more information and a FREE copy of Cap Gemini America's Y2K Readiness Survey\*, call 1-888-Y2K-TODAY or visit [www.usa.capgemini.com/y2k](http://www.usa.capgemini.com/y2k).

# Up to Speed – Fast

*Want new hires to stay? Start them off with a good orientation program that gets them working right away*

BY ALAN S. HOROWITZ

**T**HINK ORIENTATION programs for new information technology hires are just nice ways for management to say hello! Think again.

For one thing, they help you hang on to the hard-to-find technowhiz you have just found.

"The first step in retaining an [employee] is a good orientation program," notes Kathleen Alexander, senior vice president of human resources and information resources at hotel giant Marriott International Inc. in Bethesda, Md. Making the employee feel welcome and helping him understand the company's culture can make a "big difference," Alexander says.

And an effective orientation boosts productivity by getting new employees "up to speed very quickly," says Christine Rousseau, CIO at Spalding Sports Worldwide in Chapeau, Mass.

Here are six elements for an effective and efficient orientation program aimed at new IT hires:

**1. The Big Picture:** When Ben Zipkin was hired last year as manager of Internet programs at Renaissance Worldwide Inc., a Newton, Mass., consulting firm, he wanted to learn right away "what my role is on the team, what my directives are, what the strategies are, and, most importantly, the overall vision." Renaissance's new-employee orientation program addressed his needs with a twofold approach.

First, a corporate orientation program conducted by the human resources department gave him standard information on topics such as benefits and vacation time. That was followed by a department-based orientation from his manager. It included discussions of group strategies and goals and the relationships among all group members. After participating in the program, Zipkin says, he understood his position in the group and where it wanted to go.

But that doesn't happen at every IT shop. Bob Zawacki, professor emeritus of management at the University of Colorado in Boulder and head of consulting firm Zawacki and Associates in Colorado Springs, says many companies excel at orienting new hires to basic nuts-and-bolts — human resources policies, benefits and so on — but

stumble in providing an overall vision.

**2. Mentors/Buddies:** Mihir Dasi, an associate at the accounting and consulting firm PricewaterhouseCoopers in New York, says his orientation program made sure he never felt alone. On his first day last June, he says, he was assigned a "buddy" (a peer with up to a year's experience) and a "coach" (a senior person). They helped cover all bases. The peer helps Dasi get oriented, answers basic questions and updates him on important inside news such as a recent E-mail on hot company projects. The coach addresses professional development issues. In addition, Dasi had his orientation class of 20 or 25 new hires to lean on. They were encouraged to quickly establish a network among themselves; it contin-

ues today, largely via E-mail.

Ryland Harrelson, vice president of human resources at credit-card processor Total System Services Inc. in Columbus, Ga., says he considers mentoring vital in keeping employees. "If you don't like the quality of your supervision, you won't stay," Harrelson recently came to Total System Services from Sears, Roebuck and Co. in Hoffman Estates, Ill., where he cut the annual turnover rate by more than half, from the 17%-to-18% range to 7% to 8%. Mentoring was a chief reason for that decline, he says.

**3. Be Prepared:** No one likes to wait for a desk to sit at or for someone to show them the ropes on his first day. Xerox Corp. knows that and makes sure everything is in place ahead of time. "We

have all things situated before they even start as far as having all their computer equipment ready, their phone, their voice mail, their E-mail," says Patricia Cole, a human resources analyst at Xerox's information management department.

Terril Kemmerer, human resources manager for IT at the agriculture and food company Cargill Inc. in Minneapolis, created a first-day orientation checklist for managers that covers everything from department policies and procedures to assigning a mentor to explain the employee's job, including the correct method of accomplishing the job, whom they report to and the standard of expected performance.

**4. Training:** Spalding provides new IT employees with two weeks of training, including teach-me modules that deal with such technical topics as data organization and how to operate the company's Hewlett-Packard Co. mini-computers, Rousseau says. Greg Myers, human resources director for the systems integration consulting unit at PricewaterhouseCoopers, views the training needs for experienced and inexperienced newcomers differently. When more-experienced people are hired, "it's usually for a specific job, and they're put to work right away, which I think is very, very important. With [recent] college [graduates], we put them through training" on technologies and consulting practices. Everyone receives two or three days of basic orientation, which includes an overview of the organization, specifics about the firm's many databases and standard human resources information.

**5. Interesting Work:** If those lowest on the food chain get only the crumbs, don't be surprised if they don't stick around long enough to be served a decent meal. "People who have been around for five or six years don't necessarily believe that newer people are appropriately qualified, so they give [them] uninteresting and routine jobs that would turn off just about anybody," says Diane Tunick Morello, a research director at Gartner Group Inc. in Stamford, Conn.

"If you can put new people under a good project manager and [give them] interesting work, that's the most important thing there is," Zawacki adds.

**6. Ask and Learn:** You may think you know what a good orientation should be — but maybe you don't. Alexander is now asking new hires about a month into their jobs what they thought of their orientations. She will use the responses to help hone her program. ■

## NEW REPORTS

## IDC Explains Seat Management

International Data Corp. in Framingham, Mass., has released a bulletin that explains the concept of seat management and how it can minimize desktop costs at midsize to large companies.

Titled "Seat Management: A Concept Designed to Minimize the Total Cost of Ownership," the report outlines an 18-month pilot project for evaluating which seat management functions are the least candidates for outsourcing.

Those include asset management functions, LAN and WAN network administration, help desk activities, hardware maintenance, installation of software upgrades and server management.

The report costs \$1,500. [www.idc.com](http://www.idc.com)

## Europe Strong In PC Sales

European PC shipments grew 23% last year, surpassing 26.1 million, according to new research from Dataquest, the San Jose, Calif., company found that the consumer segment drove the overall market, with customers motivated to purchase PCs as they could connect to the Internet.

The Western European market was particularly strong, showing its largest growth (30%) in a decade.

The research is available in Dataquest's report, "PC Quarterly Statistics Europe." The report costs \$5,000. [www.dataquest.com](http://www.dataquest.com)

## Shopping Survey

Zone Research Inc., based in Redwood City, Calif., has announced a 75-page report on online shopping, based on a holiday shopping survey of 1,022 Internet users. The report - "1998 Holiday Shopping: Is Web-based

Buying Reaching Critical Mass?" - says that more respondents purchased gifts online (53%) than shipped via paper catalogs (40%) last year.

Respondent profiling and demographic information is provided.

The report costs \$895. [www.zoneresearch.com](http://www.zoneresearch.com)

## BRIEFS

## CSC Team Gets Postal Contract

The U.S. Postal Service has awarded a contract potentially worth \$106 million to a systems integration team led by Computer Sciences Corp. The contract is intended to develop and implement a payroll/human resources system for the U.S. Postal Service, which has 675,000 employees.

## Y2K Bookings OK

Amadeus, the Madrid-based travel industry service, said it has successfully processed more than 500,000 airline bookings for year 2000 travel on nearly 500 different carriers from around the world.

## Show Me The Money

What perk would increase your loyalty to your employer?

A raise	43%
Improved benefits	23%
A more flexible work schedule	14%
Stock options	8%
Better training	5%
Don't know	8%

## Shape up or ship out

**D**URING THE NEXT few months, year 2000 project managers will trigger the largest shift in business-to-business relationships in modern history. Most organizations now have a long list of vendors whose year 2000 status is either unknown or highly suspect. The moment of truth is approaching: If they aren't ready, it's time to stop doing business with them. We've been talking about this for

months in year 2000 project teams across the country. We've contended to hope that our key vendors will somehow accomplish a miracle and convince us they're going to be ready. But the decision to switch will have to be made this spring. The decision may have to be ratified by senior management, or even by a board of directors' resolution, but it will be based on the recommendations of the year 2000 team.

The most obvious remedy is to replace the noncompliant vendor with a compliant one. But such a switch is painful, expensive, time-consuming and risky. A Fortune 500 company doesn't casually change its primary banking relationship or telecommunications vendor overnight. Consequently, a transition from bank A to bank B, or from telecom vendor X to telecom vendor Y, has to be done sometime during the first half of this year so that the new relationship can be established, new computer systems installed, new computer interfaces tested and the inevitable glitches resolved. Nobody in his right mind is going to attempt such a major transition in the fall; it would be like playing Russian roulette with five live bullets.

What makes this potentially explosive is that the same decisions will be made at approximately the same time all over the country. If a single Fortune 500 company decides to switch its relationship from telecom vendor X to telecom vendor Y, it probably wouldn't be catastrophic for X. But if 10 or 20 or 100 of the Fortune 500 companies abandon X because of a common perception that X is unlikely to finish its year 2000 work in time, it will have profound consequences - especially if X is itself a Fortune 500 company.

Once that begins to happen, there may be a sea change in business-to-business relationships that could make the investment banks, mutual funds and brokerage firms begin scrambling

to shift their own funds out of the perceived "losers" into the perceived "winners." The politics surrounding all this would be intense; the CEOs of "loser" vendors should be prepared to be in the spotlight several months before Jan. 1, 2000.

You should be prepared for some arm-twisting from senior management as well as requests for continued procrastination. Your CEO, for example, may call you into his office and say, "I know you're concerned about the lack of cooperation we've been getting from the year 2000 team at XYZ Co. But the CEO of XYZ and I were playing golf last weekend, and he personally assured me that they would be ready. So I'd appreciate it if you would rethink your recommendation to switch suppliers." Or you might get a call from the chief financial officer, who'll say, "I know you've been threatening to pull the plug on our telecommunications provider because of its lack of year 2000 progress, but do you realize what it would do to our profits this year if we switch? I really think we should wait another three to six months before we make such an important decision."

Ultimately, the decisions will have to be made by the CFO, the CEO or the board. But if things turn sour at the end of this year because senior management dawdled, you're likely to find that

their memory of early 1999 suddenly is fuzzy. Thus, it's crucial that your advice and recommendations about the year 2000 supply-chain risks be loud, clear and unequivocal. This is indeed the moment of truth with regard to mission-critical suppliers. Don't let your senior management forget it. ■

## State Street Bank's change in direction required a new IT approach. Here's how CEO Marshall N. Carter steered the ship By Kathleen Melymuka

### THE CEO

**NAME:** Marshall N. Carter

**TITLE:** Chairman and CEO of State Street Bank and Trust Co. and its holding company, State Street Corp.

**AGE:** 58

**PERSONAL:** Married, two children

**EDUCATION:** Bachelor of science, civil engineering, U.S. Military Academy at West Point; master of science, operations research and systems analysis, U.S. Naval Postgraduate School; master of arts, School of Public and International Affairs, George Washington University.

**EXPERIENCE:** Former Marine Corps officer, two tours of duty in Vietnam, awarded Navy Cross and Purple Heart; White House Fellow at State Department and Agency for International Development; Chase Manhattan Bank Corp., 1978-91 (last position: chief of global securities services).

**HOBBIES:** Commercial pilot, flies his own plane near his summer home.

**M**ARSHALL N. CARTER has changed the course of the venerable State Street Bank and Trust Co. in Boston since taking the helm as CEO in 1992. At that time, State Street was a highly centralized investment bank focusing on asset custody: keeping the accounts of institutional investors such as corporate treasurers, pension plan managers and mutual fund managers. It also was highly successful, boasting 15 straight years of double-digit revenue growth.

But Carter was convinced that the bank had to broaden its focus to asset management: the decisions and activities involved in trading securities. He found that changing a successful strategy was easier said than done. The bank's technology, though formidable, was basically a humongous book-keeping machine.

The technology requirements to play in the asset management markets were different — and staggering: The bank would have to gather, coordinate and analyze enormous volumes of data from around the globe — capabilities based on huge, mainframe-oriented, transaction processing engines. It also would have to provide user-friendly, PC-based, Internet-enabled tools to let the bank's customers — institutional investors — access and manipulate that data for their own purposes.

Simultaneously, Carter would have to retool a highly centralized, tightly controlled corporate culture into one with independent businesses working in an entrepreneurial style.

"It was as if you had an auto company and all you made was pickup trucks," he explains. "All of a sudden, you need to make sedans and station wagons. How do you actually develop those from a truck assembly plant? How do you get people to sell them, service them, put bells and whistles on them so you can make more money than with this plain-vanilla pickup truck?"

In just over six years, it's a done deal. Carter has reinvented State Street, transforming it from a bank using technology to serve its customers to an information technology company providing state-of-the-art tools and services to its customers. The bank's total revenue, profits and earnings per share more than doubled during Carter's first five years, and last year marked the 21st consecutive year of double-digit growth. Revenue was up 17%, the asset custody business grew by 23%, and assets under management did one better: up 24%.

Last year, Carter won Gartner Group Inc.'s Excellence in Technology Award, and his vision has been widely praised. "He is an excellent CEO," says Heather Bellini, an analyst at Lehman Brothers Inc. in New York. "If you talk to competitors about who runs the business the best way, people always mention State Street."

Still, success hasn't come cheaply. The bank's technological bells and whistles have come at the expense of some basics, and Carter's liberal spending habits sometimes make Wall Street nervous. But Carter, a Vietnam War veteran, is unfazed by his critics. "In business, they don't shoot real bullets at you," he smiles, "just paper bullets."

# OLD NEW

### Charting a Course

In 1972, a group of Boston ship captains founded State Street Bank, and the organization sailed straight until the 1970s when CEO William Ederly steered away from traditional business to asset custody. The bank found a niche in the processing-intensive business, and by the time Carter became CEO, State Street already had become a processing powerhouse.

But if the bank had begun to look like a technology machine under Ederly, it began to think like one under Carter, who's known for long-term, strategic planning and has little patience for shortsightedness. "I've worked for organizations where strategic planning was thinking about what you were going to have for lunch," he says. But Carter was looking beyond the bank's success to how it could retain its edge during the next 20 years.

This is what he saw. The securities investment process has three phases: pretrade, in which you analyze the market; the actual trade, in which you settle accounts; and posttrade, in which you maintain records. Research showed that the posttrade part of the cycle, which the bank emphasized, accounted for only 16% of the revenue potential. Trading was 60% and pretrade, 24%. "So if we wanted to continue to grow, we had to broaden our product line," he explains.

### Re-rigging

To spur growth in the asset management business, Carter had to jumpstart the bank's technological brainpower and blow away the competition with speedily developed state-of-the-art products. He did that by breaking

## THE COMPANY

State Street Bank and Trust Co.

ASSETS UNDER CUSTODY	\$4.6 trillion
ASSETS UNDER MANAGEMENT	\$485 billion
ANNUAL REVENUE	\$2.6 billion
BUSINESS SCOPE	Does business in 82 countries
EMPLOYEES	16,800
SECURITIES RELATED	
TRANSACTIONS PER MONTH	2 million
CASH MOVED DAILY	\$200 billion
WEB SITE	<a href="http://www.statestreet.com">www.statestreet.com</a>

down the centralized State Street culture into separate businesses, each with its own CIO. "My predecessor was brilliant," he says, "but every decision came to his desk. I had to decentralize decision-making, authority and — even harder — entrepreneurship and innovativeness. I wanted to have them make the decision."

Carter demanded that each business take responsibility for its technology. For example, the head of global foreign exchange trading was given responsibility for delivering Global Link, a huge technological success. It gives institutional investors PC-based tools to analyze foreign exchange markets and perform trades online, putting the bank smack in the middle of the pretrade/trade markets. That development strategy, which cuts down on the back-and-forth between businesspeople and techies, cut development time for Global Link in half, Carter says.

"Business and tech people work hand in hand," says corporate CIO John Fiore. "I attribute that to the philosophy that Marsh has."

That philosophy is simple: Technol-

ogy is the business. "We're not using technology to augment some manual process," Carter says. "We could never go to a manual process."

From Global Link to In-Sight, an Internet-enabled, online system that delivers products to help pension managers analyze and adjust their portfolios in real time, Carter's technology products have wowed Wall Street. "State Street has been an amazing story," Bellini says. "It has great people on the technology side, and they have a lot of great ideas in their pipeline that they can tap at any time."

### View From the Bridge

Carter's style is highly personal. He's known for calling anyone anywhere in the bank to get the pulse of an issue. "He doesn't get hung up by titles or levels in the organization," says John R. Towers, executive vice president of global operations.

Fiore recalls that when he was technology chief for a small line of business at the bank, Carter often would show up at sales presentations. "I can't tell you how much of an impact it had on me as an employee — let alone on the client — to have the chairman of State Street fly in," Fiore says. "You can't help but get geared up to run through brick walls when you see the chairman take time to do those kinds of things."

Carter approaches technology as a bit of an insider: One of his three degrees is in systems analysis. "For a CEO of an organization the size of State Street, he's very tech-savvy — in some ways maybe too tech-savvy," Fiore laughs. "He's always coming up with ideas. He's always challenging you."

Carter balances his technology know-how with a CEO's vision. Five

years ago, when the bank was developing software to translate between mainframes and distributed networks, the technologists anticipated a couple million transactions per day, but Carter demanded that the system's capacity be limitless. It now routinely handles 150 million transactions daily. "One of our underlying principles is to make things scalable so there's never an upward bound on what can happen," he says.

### Spending Strategy

But that principle requires liberal spending, and lately, there have been some grumblings on Wall Street that State Street's expenses have been growing faster than revenue.

Fiore's response: State Street should be judged as an IT company, not a bank. "The metrics that drive our business are very different from those of a retail bank," he explains. The Economist magazine agrees, reporting in its July 13, 1996, issue that although State Street's spending/revenue ratios are unfavorably high compared with U.S. banks, they're highly competitive when compared with information management firms such as Electronic Data Systems Corp. and First Data Corp.

Carter is unapologetic about the spending/revenue picture. "I told them I was managing the company on a strategic track and we had to reinvest now," he says. "Wall Street didn't like that at all. All they wanted was a quarterly number."

Carter acknowledges that he has spent freely. "Sure, we probably spent millions of dollars that we might not have had to spend, but that's the price you pay [for] speed," he says.

That price may have been a down payment on the future, Bellini says. "It appears that they will continue to gain share in most of the markets they're in."

Carter also acknowledges that in his quest for creativity, he has shortchanged some of the basics. For example, the technology powerhouse still has no company-wide E-mail system. But he hesitates to impose standards on the businesses. "If you're really going to focus on revenue growth, you have to give the charge to your business executives."

Still, he says, "There's a balance, and we're beginning to say we need to balance it better."

Achieving that balance is part of Carter's challenge to continually reinvent the bank, but that's the kind of challenge he likes best. "That strategic plan is 6 years old now," he says with undisguised eagerness, "so we're in the process of figuring out what we do into the next century." ■

# BANK IDEAS

# GET ME OUTTA HERE!

Low staffing. High stress. Long, long hours. For many IT professionals, the No. 1 requested benefit has become...

# TIME OFF!

BY MARY BRANDEL

Two very different information technology professionals, two very different attitudes about balancing work and time off. Increasingly, however, it's the Weisbrothers of the world whose needs and desires companies must respond to (see exhibits at right). That is, if they want to sustain or improve their retention rates.

"Right up with families," says Diane Thum, human resources manager at Comerica Inc. in Auburn Hills, Mich. Comerica surveyed employees three years ago and instituted policies such as a 9/80 program to soothe the ruffled feathers of the overworked. "I just think the whole attitude in life today is that people want more time off," says Donald Schuman, vice president of information services at Ace Hardware Corp. in Oak Brook, Ill.

Exacerbating this general change in attitude is the industry's overdemand and undersupply of technical talent, according to Mark Polansky, managing director of the IT practice at New York-based Korn/Ferry International. Add to that the increased demand for IT projects, plus year 2000 and electronic-commerce projects, and you've got a "really stressed-out situation," Polansky says.

In addition to retention bonuses and other goodies thrown at qualified IT people, more companies are offering enticements such as extra personal time and "a general accommodation to give-and-take," Polansky says. For example, if an employee endures grueling hours on an important project, he might be rewarded with three days' vacation.

That's the case at Ace Hardware — up to a point. "We're willing to give programmers comp time or paid overtime," Schuman says. However, because of the skills

## EXHIBIT A:

Matt Weisbrother is a project manager in the year 2000 effort at Coors Brewing Co. He lists his priorities as his first, work second. He tries to limit his hours to 40 per week, but that's getting tougher given the looming millennial deadline.

But Weisbrother feels so strongly about getting time off that he helped institute a "9/80 program" at Coors in which employees can work an extra hour per day for nine business days to exchange for every 10th day off.

"I carry a paper at all times, but if I'm on vacation out of town — tough luck," Weisbrother says. He does, however, concede to checking voice mail. Time out of the office is very important. "It's how I keep my sanity," he says.

## EXHIBIT B:

Bob Urtus is a manager of Internet-related systems at Sears, Roebuck & Co. He works 10 to 11-hour days. His last vacation was a year ago. In addition to his logbooks, he brought his laptop computer to check E-mail (which averages 80 messages daily) and the Web logging site daily.

Urtus wakes up at 5 a.m. and checks his E-mail before arriving at work. "I enjoy what I do. It's more of a hobby," Urtus says. "So the issue of time off vs. time spent at work is not an equation that's on the top of my mind."

shortage, "we're tending to want to pay them for overtime rather than with comp time," he adds.

But many workers would rather get the time than the money. "We've seen people walk away from significant bonuses rather than deal with the continued stress of long hours," says David Dell, research director at The Concoors Group, a consulting firm in Kingwood, Texas. And at Coors, where approximately 60% of employees

take advantage of the 9/80 program, workers also can buy up to a week's worth of extra vacation time.

At Ace, newer employees with just two weeks' vacation have requested deductions from their paychecks that go toward extra days off. "We can bank holidays and vacation days and put the money in a savings account. But I'd rather take the days," says Chris Deboo, manager of the corporate IT operations and networks at Ace.

Especially in Deboo's case, it's flexible hours and telecommuting that have formed her attitude. Ever since her first child was born, "my work schedule has changed dramatically," she says. Although she still logs many hours, less of it is in the office and more at home, where she has E-mail and voice-mail capabilities.

Because it has gotten more difficult to separate work from home, "I really need the mental break of vacation, that feeling of, 'I'm out of here,'" Deboo says. Once on vacation, Deboo says she has to exhibit some real discipline not to check back with the office. "On my last vacation it was a chore, but I didn't even log on to check E-mail. Of course, I had 100 E-mails when I got back into the office," she says.

Companies that have increased time-off opportunities don't attribute their better retention rates to these practices. But with turnover numbers as low as Coors' (less than 5%) and Sears' (6%), vs. industry averages of anywhere from 12% to 20%, you have to wonder. "A good strategy for dealing with the personnel-time needs of employees can certainly increase retention and improve recruiting costing averages," Dell says. ▀

Brandel is a freelance writer in Norfolk, Mass.

## Time Is on My Side (Yes It Is)

What if your company doesn't have any formal policies to plan to give employees flexibility or extra time off? Or maybe you feel you aren't able to clear your desk in order to get the vacation time you need?

In these cases, take a hard look at how you prioritize your work. "I would set the question, 'Am I really spending my time on the most important things the organization is trying to focus on, or am I off

on some tangent?'" says Bob Urtus, manager of Internet-related systems at Sears.

"If the management team doesn't recognize the amount of effort you're putting in, establish what is important, put it on paper and agree on it," Urtus says.

Often, information technology managers aren't fully aware of what flexibility is available inside the organization, says David Dell, research director of

The Concoors Group. So you may need to research what arrangements are available to meet your individual needs.

Many employees simply expect the company to be as flexible with its time as they are with theirs. "I get calls at 2 in the morning, and if something's broken, I don't have until 8 a.m.," says Drew Debois, a project manager at Safeway Co. Inc. in Belton, N.C. Debois recently scored a few extra vacation days because of a particularly grueling November spent integrating the sys-

tems of a newly merged company.

But as you're going to balance work and the life you, "You have to determine what is important — whether it's your home or some external factor," says, "How many days you need 20 hours of extra time on my problem?" says Matt Weisbrother, project manager at Coors. "Is this truly a situation where you have to work, or is someone going off the deep end? You have to be stick-shouldered about it."

# MAKE MORE MONEY NOW!

---

Sure, your paycheck is bigger than it was a year ago, and bonuses are getting fatter and more frequent. But it's not enough. You want more. Much more. All you can grab. Here are some tips on how you can get the boss to loosen the purse strings  
By Thomas Hoffman

---

## TOP 10 TIPS

ON WHAT IT TAKES TO SHARE THE BOSSES' LOOT

**10. The Mouse-to-the-Grindstone Award**

For managers such as Mike Altiero at American International Group Data Center Inc., employees don't have to make "a big, pizzy achievement" to get due attention. Information technology managers know what it takes to get the job done day in and day out. Most of them came from the trenches.

For Altiero, who oversees network operations and enterprise management at the Livingston, N.J., insurer, fixing a light on a network management console "may not sound like much, but it's important because it's the technical, behind-the-scenes type of stuff I can see as a manager."

**9. The Building-a-Better-Mousetrap Trophy**

Companies continue to chant the Michael Hammer re-engineering mantra of the mid-90s, even if it has been brought to a low ebb. But as managers are forced to squeeze as much productivity out of as few employees as possible (can you say "downsizing?"), it's becoming more difficult to spot opportunities for process improvements and act upon them decisively.

That's why The Allstate Group's Mike Jaslowksi would be willing to shower cash on any IT staffer capable of dreaming up brilliant ways of improving efficiency — such as identifying a spot for an intelligent agent where none currently exists.

Being an IT guy himself, Jaslowksi, director of enterprise systems management at the Northbrook, Ill.-based insurer, might be assumed to be biased when it comes to criteria. "All IT people everywhere are underpaid, so they all deserve big raises," Jaslowksi says.

**8. The Making-IT-and-Business-Play-Nice-Together Prize**

End users always say nice things about their IT departments — when it's on the record. Off the record and by the office canteen, however, the language often used to describe IT probably would shock even Andrew "Dice" Clay.

Members of BankAmerica Corp.'s call center sales force say "those chip heads don't understand what we're doing," says Randy C. Swift, senior vice president at the Richmond, Va.-based bank. "So we [offer IT incentives] to share in the goals of our call center projects" through bonuses and other reward programs.

The notion of having cross-team incentives for the business and IT folks to share "is starting to take off" at KeyCorp in Cleveland, says Patrick J. Swannick, vice chairman and head of compensation at SunTrust Banks Inc. in Atlanta.

**7. The You-Did-Something-Right Grant**

IT professionals "usually aren't recognized until something goes wrong," notes Robert J. Hutchinson, head of channel management at Michigan National Bank in Farmington Hills. That's why the bank makes an effort to recognize its IT employees when they do things right "as a key part of rewarding and retaining our top employees," he says.

Cash incentives tend to work well for sales jobs, and noncash incentives such as paid vacations work best for service positions, including IT, says Bridget Compton, vice president and head of compensation at SunTrust Banks Inc. in Atlanta.

**6. Learn the Business and Win a Free Trip!**

Indeed, the lure of traveling somewhere exotic — and we don't mean heading off to a regional office to help burn in a new LAN — is appealing to many IT professionals. Amadeus National Marketing Cos., a Miami-based marketing arm of the international travel reservation organization, is setting up a travel program to reward IT employees who show an understanding of the business "beyond their technical expertise," says Jim Davidson, president and CEO of Amadeus NMC.

"It's one thing to go out and get top-notch application program-

mers to have something fun and exciting to work on, but [the program] is also intended to help them [expand] the business," Davidson says. "We're not a public company, so we can't offer stock options."

But it can offer, for example, a cruise for programmers who finish a project ahead of schedule. Not a bad carrot.

**5. The Entrepreneur-of-the-Year Award**

By and large, IT professionals are paid to fix problems, not to dream up new revenue opportunities for their companies. Still, IT managers say they would handsomely reward staffers who thought up brilliant schemes to help the business.

"We're probably an odd place to look since we're a trade association, but what leaps out at me are people who can think of ways of reaching a new segment of retail that hasn't been tapped before. I would reward that," says Cathy Horika, vice president of IT at the National Retail Federation, a Washington-based trade association.

**4. The Innovation Inventories**

Managers also are willing to reward employees for simply thinking of better ways of doing things. "We value innovation," says Linda Libbey, director of strategic recruiting and retention at United Healthcare Corp.'s strategic business services group in Hartford, Conn.

To reward its IT employees — including entry-level workers — for innovative ideas, United Healthcare has created the Star Award. Given at least once a month, the program honors both IT teams and individuals for thinking outside the box.

United Healthcare IT employees are eligible to win cash, trophies and T-shirts in addition to the citations of their achievements that the company posts on its home page ([www.unitedhealthcare.com](http://www.unitedhealthcare.com)). Cash awards range from \$50 to \$1,000.

**3. The 999,999-Line-of-Code Endowment**

Doing something well — and doing it right — is enough to catch the attention of IT executives such as Mike Tiernan, vice president of IT at CS First Boston Corp. in New York.

"Everyone [in financial services] is focused on EMU [Economic and Monetary Union conversion] and year 2000. There isn't much going on in new projects or enhancements that would knock our socks off. So what we would reward is outstanding work associated with EMU and Y2K, making sure that our systems are compliant," Tiernan says.

**2. The Self-Starter Certificate of Achievement**

"The things that knock my socks off are people who seek the undiscovered without being told to do it, pull it together and find an opportunity for the business to become more efficient," says Irene Dec, year 2000 program director at The Prudential Insurance Company of America in Newark, N.J.

Dec points to a staffer who recently put together a document at Prudential called "The Year 2000 Frozen State." It identified specific areas where software projects would be "frozen" in 1999 because "you can't just make a blanket statement that year 2000 is going to stop all IT projects," Dec says.

And the No. 1 way to impress the boss enough to win that big raise or bonus you've been seeking:

**1. Just Stay!**

...pleads SunTrust Bank's Compton, a sentiment that's easy to understand given the current IT labor crunch. ■

DRIVING THE DEAL/JOE AUER

## Small and Hungry Beats Big and Sluggish

**I**N SEVERAL RECENT multimillion-dollar deals, including an outsourcing initiative at a Midwestern bank and a security project at a major consumer products company, the procurement teams selected regional or niche suppliers over much bigger international, full-service providers. This came as a surprise to the procurement teams. They expected going in that they would select the larger suppliers. It turned out the smaller organizations were more flexible and responsive and showed a greater sense of urgency and commitment to getting results. In contrast, the teams perceived the larger organizations as sluggish, bureaucratic and arrogant.

How did these negotiating committees come to their conclusions? These weren't seat-of-the-pants evaluations. They used sound requests for proposals (RFP), negotiations and selection processes to evaluate the larger and smaller suppliers. The process enabled them to uncover that the smaller suppliers were more willing to contractually commit to deliverables.

The tip here? When you send out your RFPs, include a customer-developed, user-oriented contract with performance and reliability standards, specific deliverables, clear and specific warranties and remedies for the customer in the event the vendor doesn't perform as represented. Require potential suppliers to ac-

cept, reject or modify to their liking each provision in the contract as a bid requirement. You'll get better contracts this way because the suppliers will know they're competing on the contractual terms (and know they could get eliminated if their response isn't good enough). This also makes your evaluation of suppliers much more complete and competitive. Together, they will help you sort out which suppliers will deliver what you want.

### Negotiating Outside GSA Bid

Here's a vendor play I'm hearing about more and more. This one is increasingly being used against private companies and government agencies. It plays out like this: A cus-

tomers asks for deeper discounts or lower pricing than the vendor is willing to extend. The vendor denies the customer's request because "our contract with the General Services Administration [the GSA is the federal government's central procurement agency] won't allow us to give you that price."

Never accept this response. It's nothing but a lie. There are many loopholes that allow suppliers to provide better deals to you than they provide to the GSA. Remember, GSA bureaucratic contracts sometimes maximize pricing, yielding those infamous \$300 hammers and \$400 toilet seats.

One of the easiest loopholes is to structure a deal dissimilar from that of the GSA (GSA

contracts and pricing schedules are public information). Here's a tactic I hear was used in a recent negotiation: Ask the vendor to extend the 1996 or 1997 price list to your current contract.

This allows vendors to extend discounts consistent with those in the GSA schedule but gives you net pricing approximately 5% to 10% less than what the GSA contract dictates.

### How Much Does Software Cost?

I often hear buyers ask this question. What I don't hear is a good answer. Purchasing managers and often end users look at software licensing like buying equipment. The rights to use someone's intellectual property isn't like buying equipment.

Firm of all, you won't own the software. You'll just have some highly restrictive rights to use it. Second, software costs nothing except the price of copying it onto the CD.

So how do vendors price their software? The list price depends on supply and demand, perceived value, the price the vendor needs to get to stay in business and, to a certain extent, what's charged for similar products to similar

customers. But what you'll actually pay depends on your negotiating power. The tip? The price of software isn't about their costs or your ownership. It's about how well you can bargain.

### Competitive Process Helps

In a recent \$1.5 million deal, a large health care organization gained several hundred thousand dollars in initial savings on desktop hardware and software through a highly competitive procurement process.

It did it by negotiating on price with three, then two, suppliers simultaneously—once the customer determined the suppliers were capable of providing the appropriate

quality of services and the deals on the table were comparable.

Keen competition enabled the customer to lower the supplier's price significantly. And those initial savings will be multiplied many times, owing to the rights, remedies and flexibilities it also negotiated into the contract. It pays to remember that selection shouldn't precede negotiations, but be a result of them. ■

## WORKSTYLES

### What's it Like To Work at . . . Kendall Co.

Interviewee: Shelli Moulden, systems analyst, help desk.

Company's business: Manufacturer of health care products.

Location: Bloomfield, Minn. (40 sales south of Boston).  
Information technology staff: 55.  
Total employees: 250 on-site, plus

remote offices and a mobile sales force nationwide.

Dress code: Business casual (most men don't wear ties; women usually go for dressy pants).

Workday: 8:30 a.m. to 4:45 p.m.; some departments have flextime. IT staffers often stay until about 6 p.m.

Kind of office: New four-wall offices are being built. Most sales are in offices, not in sales.

Computer: About 60% are Dell desktops, and more and more people have portables.

Ergonomic devices: Headsets, keyboard trays and mouse pads with wrist support.

Do people use their CD-ROM drives to play music? Yes.

What CDs do people play? Classical music, Neil Diamond, country music; a lot of programmers use their headsets, so there's no telling what they're listening to. Sometimes you won't hear any music at all, and other days, you might hear five or six different kinds.

Any singers in the office? Some singers, but mostly learners.

Must I staff carry laptops? Yes.

Percent of IT staff that telecommutes on a given day: Pretty much on one, unless it's a really bad

snow day or an ice storm.

On-site day care? No.

In-house cafeteria/food service: Yes (rates a 7 on a scale of 1 to 10).

Best lunch here? There's a great lunch bar with different soups available every day.

Free refreshments: Coffee, tea, hot chocolate and spring water.

The one thing everyone complains about: A lot of people with hot butter coffee—they think it isn't very flavorful. Some people have coffee makers on their desks.

Where the office greets: In the coffee room, which is where the toaster and microwave are located.

Favorites in the coffee room: The candy machines.

Favorites in the candy machines: Seltzers here—they're gone a day after machine is filled.

Little perks: An active employee appreciation program, through which you get a tin of popcorn or two candy tickets.

Last companywide/department party: Movie tickets.

Would employees feel comfortable e-mailing the CEO? Yes.

Quote: "People like this office. Because we are in the transition of moving our sales around, it's a little hectic right now, but I think people enjoy working here."  
—Linda Bell

## Building on ERP

How do you plan to extend your enterprise resource planning system?

- 70% Give users access to real-time data
- 64% Integrate with E-commerce systems
- 56% Link to systems at suppliers
- 44% Link to systems at customers
- 44% Integrate with decision-support systems

Base 770 survey of 1,000+ IT executives surveyed by research firm, research group and an online questionnaire. Research was partly funded by PricewaterhouseCoopers and SAP Microsystems Inc.

## R/3-D&amp;B Links

SAP AG last week announced a pair of interfaces that let users of its R/3 enterprise resource planning package access The One & Broadstreet Corp.'s database of credit and purchasing information. The jointly written interfaces are due for general release next month.

The links cost \$32,000 each and support accounts payable and accounts receivable applications. [www.sap.com](http://www.sap.com)

## CyberCop Scanner Now Runs on Linux

Network Associates Inc. has announced a version of its CyberCop Scanner for the Linux operating system. The product is a component of Net Tools Scanner, which the Santa Clara, Calif., vendor sells for \$56 per node for 5,000 users. [www.nai.com](http://www.nai.com)

## Interleaf Updates Publishing Suite

Interleaf Inc. has announced Interleaf 7, the latest version of the electronic-content publishing tool. Interleaf 7 supports more formats than previous versions, according to the Waltham, Mass., company.

Pricing starts at \$1,200; the upgrade is free for existing customers. [www.interleaf.com](http://www.interleaf.com)

## 2 MICROSOFT UPGRADES TARGET THE ENTERPRISE

## Scalability of SQL Server 7.0 for ERP apps questioned

BY STEWART DICK

RECENT announcements that enterprise resource planning (ERP) software packages like SAP AG's R/3 now can run on SQL Server 7.0 indicate ERP vendors believe the Microsoft Corp. database is solid enough to handle heavy data loads.

Some early adopters also have shown faith in the database. But analysts say the underlying operating system, Windows NT, will restrict SQL Server 7.0 to ERP installations involving no more than 1,000 users.

Pennzoil-Quaker State Co. in Houston is one of the handful of companies that have worked with Microsoft to build an SAP R/3 ERP system on SQL Server 7.0. Pennzoil CEO Britt Mayo said the system has been "stable and reliable" and added that users have seen "substantial" improvements in query response time.

Eye Care Centers of America Inc., the third-largest optical retailer in the U.S., has found that the database and Windows NT suit its needs well. Eye Care runs a financial accounting application from Great Plains Software Inc. on

top of the Microsoft database.

Tony Moos, director of corporate systems at San Antonio-based Eye Care, said SQL Server 7.0 will take care of "any future plans that we can foresee. Even if we doubled our system requirements today, we'd be well within its limits."

At Hilwa, an analyst at Garner Group Inc. in Stamford, Conn., said SQL 7.0 can handle up to 500 concurrent users, which would be similar to an SAP L000-user system, which no more than 500 people would probably use at once.

"Microsoft has done a good job scaling SQL Server for a well-designed application like SAP," Hilwa said, but it can't reach the 2,000-user limit of a Unix-based system running an Oracle database.

Richard Finkelschtein, a Chicago go-based analyst at Performance Computing Inc., said a midsize system is fine for the database, but the NT operating system it runs on is the drawback.

NT was "designed to make money from desktops, not to run mission-critical applications," he said. "Unless companies are willing to cut back on the kind of business they want to do, they'd better stay away from it. Microsoft can't scale NT to compete with Unix and at the same time support the desktop. It's like IBM trying to make a desktop version of MVS—it just doesn't work."

## SMS 2.0 goal is to improve inventory, apps distribution

BY SHARON DAUDIN

CORPORATE USERS are betting that Microsoft Corp.'s new version of its Systems Management Server will make it easier to distribute software and inventory their systems.

SMS 2.0, which is shipping now, was designed to improve on both Version 1.2's software distribution capabilities and its software and hardware inventory performance.

SMS, a part of Microsoft's BackOffice suite, is used to manage Windows-based software and related hardware—distributing software, taking

TCP/IP network segments instead of only to a machine or domain.

And the spokesman said IT departments that use Version 2.0 can choose if users must accept the software immediately, if they have a spool of time to accept it or if they can choose not to accept it at all.

"We really need it to help us roll out software," said Scannell, who added that he plans to move his 8,000 client licenses from Version 1.2 to Version 2.0 during the next few months.

"Last year, we did 500,000 independent updates. For the most part, before SMS, things just didn't get done. If you went to somebody's workstation, you'd find a version a few years old," he said.

Patrick Dryden, an analyst at Giga Information Group Inc.

SMS 2.0 GIVES IT administrators the ability to fine-tune software distribution to individual users, groups of users or TCP/IP network segments instead of only to a machine or domain

inventory, metering and performing automated audits.

There have been some limitations with [Version] 1.2," said John Scannell, director of information technology planning at Consolidated Edition Company of New York Inc. "It just didn't drill down deep enough in terms of inventory... and it wasn't granular enough for distribution. This version should solve some of those problems for us."

A Microsoft spokesman said Version 2.0 gives IT administrators the ability to fine-tune software distribution to individual users, groups of users or

in Austin, Texas, said users should see a marked improvement in Version 2.0.

"[Version] 1.2 had a bad rep," Dryden said. "An administrator had to know SQL, because that was the repository. And the software distribution was awkward to use, requiring a lot of granular attention."

Dryden said Microsoft is catching up with vendors such as Network Associates Inc. in Santa Clara, Calif., and Platinum Technology Inc. in Oakbrook Terrace, Ill., which have long made distribution and inventory easier to manage, giving IT more control. ■

DATA	SPACE
SQL Server 7.0	500 concurrent users
ERP systems running on Oracle	1,800 concurrent users
IBM's DB2 running on a midrange	5,000 concurrent users

## Data Warehouse Project Starts Simply

Lexis-Nexis avoids complexity quagmire

BY STEWART DECK

Lexis-Nexis was determined not to fall into the swamp that a data warehouse project can become.

The Dayton, Ohio-based provider of legal and news documents wanted to know more about its 1.7 million subscribers. But the company's information technology staff knew what a quagmire a warehouse could turn into, as different parts of the business argued over data definitions and the complex jobs of scrubbing and importing data.

So the company started the project with simple goals and had the first working pieces in place in three months.

"Our subscribers will grow geometrically with Web-based access," explained Keith Hawk, vice president of sales for the Nexis division of Lexis-Nexis (itself a division of Reed Elsevier Inc.). "And therefore our business model is changing from selling primarily into or-

ganizations to selling to individual users."

To track those new customers, Lexis-Nexis needed to replace its decision-support system — a thicket of legacy systems and an old IBM DB2 database — with new tools and a data warehouse that will let 475 people and in-house analysts look up daily detailed customer usage data.

### Heavy Machinery

At the core of this new system — which will be fully in place by June — is an NCR Corp. Teradata parallel database running on a two-node, NCR WorldMark 4700 server with 364G bytes of storage.

"We are taking our reporting system and building it as a customer-centric warehouse for analyzing customer information so that we can better understand and predict customers' needs," said Pam Dunskey, vice president of information systems at Lexis-Nexis.

"This gives us a scalable platform with better delineation between our operational and analytical environments and gives us a good place to start," Dunskey said.

The type of data the company's salespeople will be surging through will include subscriber usage patterns — what they look up, what sources they use most often, when they're connecting — along with customer contract details.

To get to that data, Lexis-Nexis chose decision-support tools from MicroStrategy Inc.

Field sales representatives who need ad hoc reporting capabilities will use MicroStrategy DSS WebPE and WebSE, while power users will use DSS Agent to closely analyze and model business processes.

Mitch Kramer, an analyst at Patricia Seybold Group in Boston, said data warehouses such as Lexis-Nexis' benefit organizations by consolidating customer information in a simple place where it can be combed through for pattern analysis. ▀

LEXIS-NEXIS PAM DUNSKY took a simple approach to building a data warehouse.

## BLUESTONE TO SHIP XML SERVER, TOOL KIT

Vendor hopes to make data-tagging language easier to use

BY CAROL SALINA

WITH USE of the Extensible Markup Language (XML) expected to skyrocket this year, Bluestone Software Inc. has shipped one of the first stand-alone XML servers that make it easier for information technology managers to exchange data with other companies.

Bluestone's new \$2,995 XML Server shipped earlier this month.

The Mount Laurel, N.J., software maker also plans to release in April its \$99 VisualXML tool kit that will help companies write Java applications that can extract data from databases or applications where the application is run-

ning — as opposed to requiring that the data be stored first in XML.

XML helps companies categorize data in a structured way, making the information easier to search, analyze and transfer. For example, one company might want to tag brand and

price information to send in to another company's order entry system without the need for cumbersome and expensive electronic data interchange (EDI) systems.

An XML Server, such as Bluestone's new offering or WebMethods Inc.'s B2B, can

help convert data into the format that the back-end system needs and deliver it to a more efficient manner than HTML, paper- or EDI-based systems.

Zona Research Inc. in Redwood City, Calif., predicts that XML usage will explode this year. Products that support XML have been slowly emerging in the market.

XML is expected to prove useful to customers such as Automotive Resources International (ARI), also in Mount Laurel, which leases fleets of cars and trucks. If a customer wants to know the vehicle numbers and mileage on trucks it is leasing, and at another time also wants to know the trucks' locations, that data can be added relatively easily using XML.

"It reduces programming cost," said Richard Hays, an ARI database administrator. Right now, the company communicates with customers via paper, and to a lesser degree, EDI, he said.

Because Bluestone's XML server and tool kit are written

in Java, they will run on any platform, including Windows NT, major Unix platforms, Linux and IBM's AS/400 and mainframes, company officials said.

An XML server, such as Bluestone's stand-alone offering, can be a cheaper alternative to expensive application servers that support XML, said Martin Marshall, an analyst at Zona Research.

Bluestone's dynamic middleware-oriented approach contrasts with the repository-based strategy of companies such as Object Design Inc., whose Excelco data server coheses and manages data that already has been translated into XML.

"We don't really want to get in the business of telling Oracle customers how to convert their data," said Coco Jaenicke, an Object Design product marketing manager. ▀

### Commerce XML Standards Effort Set

More than 40 vendor and user companies last week announced plans to launch the Commerce Extensible Markup Language (CXML), a subset of XML that will define standard sets of data for Internet-based electronic commerce.

A simpler, more lightweight version of electronic data interchange, CXML's first tags and first production prototype will be released for public review on March 3 and sent to a standards body within six months, said Paul Tsou, vice president of corporate strategies at Arbis Inc., the Sunnyvale, Calif.-based software vendor that's leading the CXML movement.

Several companies plan to release products that conform to CXML.

—Carol Salina

## BRIEFS

A Deeper  
Shade Of Blue

IBM has announced an RS/6000 SP system based on its 64-bit PowerPC microprocessor. According to IBM, the chip delivers double the number-crunching capabilities of its predecessor—the PowerPC chip that powered Deep Blue, the chess-playing supercomputer that beat world champion Garry Kasparov in 1997. [www.ibm.com](http://www.ibm.com)

Storage  
Network Switch

Vital Corp. has released the Vital 8100, an eight-port Fibre Channel switch for storage networks. According to the Redwood, Wash., company, the switch delivers 200MB/sec., full-duplex speed from any port to any other port. Configuration and monitoring software also is included.

The 8100 is set to ship in April for \$8,495. [www.vital.com](http://www.vital.com)

## Fujitsu Notebook

Fujitsu PC Corp. has announced LifeBook EX70, a notebook with dual multifunction bays, which let users hot-swap devices and batteries. According to the Milpitas, Calif., company, the product includes a 200-MHz Pentium II processor, 16MB of RAM, 6.4MB of RAM, a 50K M/Sec. modem and a 13.1-in. display.

It comes with a 6.40-byte hard drive and a removable Zip drive from Imago Corp.

LifeBook EX70 costs \$3,099. [www.fujitsu.com](http://www.fujitsu.com)

DG Ships New  
Avion Server

Data General Corp. is now shipping the Avion IV 2704R, a rack-mount server designed for high availability. The server can include up to four 450-MHz Pentium II S-series processors from Intel Corp. and 40 bytes of memory. According to the Westborough, Mass., company, up to nine of the quad-processor systems can be stacked in a single cabinet.

Pricing starts at \$7,500. [www.dg.com](http://www.dg.com)

CAPACITY PLANNING  
MORE VITAL THAN EVER

*Flood of data prods FedEx, other companies to improve estimates*

THE GROWING popularity of online commerce and enterprise resource planning applications are putting greater pressure than ever on information technology organizations to accurately estimate system needs.

The tendency of these applications to quickly saturate server and network resources could mire companies in an endless cycle of upgrades and migrations if proper capacity planning isn't undertaken, users and analysts warned.

Server and network capacity planning gives users a way to predict the resources needed

to run a particular application optimally and how much headroom is needed for growth.

When done right, it gives administrators a way to answer capacity questions relating to disks, memory, PCs and the network.

Without it, performance slowdowns caused by overtaxing systems could end up hurting companies big-time, said Steve McKown, director of information technology at specialty tea maker Celestial Seasonings Inc. in Denver.

The company is trying to move some of its catalog business to the Web. It uses capacity planning tools to figure out how many online transactions its server and networks can

handle without performance degradation.

The lead time to enhance your infrastructure from a capacity standpoint could take weeks," McKown said. In the meantime, "there is just too much business opportunity you stand to lose" because of poor advance planning, he added.

Online stock traders offer another example of the need for adequate capacity. The recent spikes in online traffic — and their impact on service quality — resulted in end-user complaints to the Securities and Exchange Commission rising 330% from September 1997 to September 1998. As a result, online trading firms are busy ramping up capacity [CW, Feb. 8].

## When You Need It

Shipping giant Federal Express also has seen growth that required capacity planning. "Capacity planning is a pretty big deal for us now because of the amount of data we have to handle," said Ann Glisan, manager of systems development

at parent company FedEx Corp.'s Federal Express data center in Colorado Springs, Colo.

At Celestial Seasonings, planners first test a small version of the application and use predictive tools to see whether its systems can handle the workload of a new application, McKown said.

Some tools for this kind of capacity planning — such as consistently tracking CPU utilization — are available at the operating system level itself.

More predictive technologies and configuration services are available from several vendors, including system makers such as Hewlett-Packard Co.

Plan, Plan, Plan  
Why you may need  
capacity planning:

- It reduces the constant need for upgrades
- It lets you better use idle capacity
- It allows better management of hardware

and IBM; and tool vendors such as Bluecurve Inc. in Oakland, Calif., Landmark Systems Corp. in Visalia, Va., and Candle Corp. in Santa Monica, Calif.

At FedEx, such tools help the company handle the vast storage requirements demanded by some of its applications, Glisan said.

For example, one application requires the company to store data on disk drives for 18 months before rolling it to off-line jukeboxes. That volume has steadily increased as FedEx's shipping volumes have risen.

Capacity tools let planners decide whether storage systems need to be upgraded during those 18 months, Glisan said. ■

StorageTek Ships Tape Drive  
For Doing High-End Backup

*Runs on mainframe,  
Unix, NT platforms*

BY RANCI DILLON

Though about six months late, Storage Technology Corp. has begun to ship its next-generation tape drive, the 9840.

The new, 20G-byte drive is targeted at demanding backup environments and near-online applications such as imaging, document archiving and video. Its primary competition is IBM's Magstar line.

In 1997, the Cleveland Clinic replaced a large cache of off-line optical storage with a tape archive based on StorageTek's Redwood tape. The clinic now is migrating that 5T-byte archive to the faster 9840 technology, which offers a 10MB/sec. data rate and tape midspan loading.

"Our current access time [with Redwood] is 100 seconds per request," said Robert Cecil, network director for the clinic's Department of Radiology. "We expect this to drop to 20

seconds with the 9840."

The 9840 works with mainframe, Unix and NT platforms. With maximum compression, each 9840 tape can hold 80G bytes. But the drive's biggest drawback is its incompatibility with existing standard media such as 3490 tapes. Pricing starts at \$27,000 per drive. ■

## 3COM BIGPICTURE PHONE

3COM Corp.'s Bigpicture Video Phone includes client-based software for point-to-point videoconferencing, multipoint chat and interactive cybercasting, according to the Santa Clara, Calif., vendor. It also comes bundled with Microsoft Corp.'s NetMeeting 2.1 videoconferencing software for point-to-point video calls and application sharing. The phone costs \$159.95. [www.3com.com](http://www.3com.com)

## Bay Management Tools Cover WANs, Billing

*Charge-back helps IT managers account for equipment and network use*

BY BOB WALLACE

LAN vendor Bay Networks Inc. last week broadened its network management capabilities with add-ons for managing wide-area network equipment from parent company Nortel Inc. in Toronto and for collecting network data for bill-back purposes.

The first add-on, Open Man-

agement Systems 3.1 for Passport (OMS 3.1), lets network managers configure, monitor and manage WAN devices — along with LAN equipment — from one desktop.

The second add-on, Optivis Service Accounting LO (OSA), helps them charge for network usage.

OMS 3.1 is the first major

step toward enabling network managers to control Bay Networks' equipment such as switches and routers as well as Nortel's Passport line of WAN switching equipment.

One analyst predicted that OSA will be a big hit with information technology departments.

"The ability to charge back for use across the LAN and the WAN is definitely important because of drivers like electronic commerce," said Elizabeth Rainge, an analyst at In-

ternational Data Corp. in Framingham, Mass. "IT managers need to be able to account for network usage."

Bay Networks is "leading the pack" with the announcement and its aggressive approach to expanding network management beyond just managing boxes, said Chris Nicoll, an analyst at Current Analysis in Sterling, Va.

OMS 3.1 and OSA will ship next month for \$2,000 and \$30,000, respectively.

## PRICE, STANDARDS COULD BOOST VIRTUAL NET USE

*Private-net alternatives didn't live up to hype in '98*

BY BOB WALLACE

ALTHOUGH Internet virtual private networks (VPN) failed to live up to the hype last year, users and analysts predict steady growth for the private company network alternatives.

An Internet VPN is a network that carries data packets — typically but not always encrypted — through virtual tunnels across the Internet. VPNs have been pitched as a far less-expensive alternative to dedicated private-line networks. But product immaturity, an absence of technical standards and a dearth of education have hamstrung their deployment.

VPN products in general have been immature on scalability, functionality and robustness, according to Dan Merriam, an analyst at Giga Information Group Inc. in Cambridge, Mass. For example, some VPN hardware doesn't support enough remote users and doesn't include routing and firewall functionality in a single box. That forces users to cobble together multiple devices at each site, which in turn complicates management.

Such shortcomings have caused concern, Merriam said, because "we're dealing with business-critical applica-

**If security is adequate on the public Internet, you have to reassess why you're staying with a private net.**

ER LEAHY, IS GENERAL MANAGER, YAMAHA CORPORATION OF AMERICA

tions with important security and performance implications."

Although last year was clearly a stumble, several developments could make this year a better one for VPNs. For one thing, deployment could accelerate if service providers and equipment vendors pitch in.

"Vendors and service providers have a huge amount of work to do this year educating users on VPNs," said Eric Zines, VPN analyst at TeleChoice Inc. in Boston. "We're finding that 60% to 70% of IT managers say they don't know anywhere near enough about [VPN] products and technologies."

"By the end of last year, we finally had [draft] standards for security and encryption that vendors could build to, which means I can choose to buy equipment from any or from multiple vendors," said Jim Fey, director of strategic technologies at PMI Mortgage Co. in San Francisco. Key VPN standards on tap are IPsec, a specification for security, and Internet Key Exchange, a specification covering encryption. Both are being advanced within the Internet Engineering Task Force (IETF).

On the pricing front, users stand to save big by replacing their private networks with VPNs, according to experts.

"VPNs are typically 50% to 70% cheaper than private lines, 20% to 60% cheaper than frame relay and over 90% cheaper than international private lines," Zines said.

One manager said security for Internet VPNs has come a

long way in a short time, thanks in part to the IETF specifications. "Security isn't bulletproof, but it's pretty safe now," said Ed Lead, information systems general manager at Yamaha Corporation of America in Buena Park, Calif. "If security is adequate on the public Internet, you have to reassess why you're staying with a private net."

Users looking to cut communication costs should take a look at Internet VPNs but should be mindful that costs are likely to come down as service providers look to sell more of their network bandwidth. And before pushing lifeblood application data over the Internet, they should push their provider to sign service-level agreements covering performance.

### SNAPSHOT

**Wide Open World**  
Sales projections of WAN-based remote data equipment and services

## BRIEFS

### Xylan Adds Switches

Xylan Corp. last week announced OnetStack 4024, a family of four small 10M/100M bit/sec. switches that support policy-based management, security and, with three of the models, Gigabit Ethernet uplinks. All four can bond four Fast Ethernet ports together to form a 100M bit/sec. megapoint, according to the Calebs, Calif., vendor. Pricing starts at \$3,450. [www.xylan.com](http://www.xylan.com)

### Win Security Tool

WebTrends Corp. has released WebTrends Security Analyzer, software that audits server programs and permissions on Windows NT, 95 and 98 and TCP/IP systems, including E-mail servers and clients, Web servers, Web browsers and FTP servers. It also offers regularly scheduled reports and recommendations fixes, according to the Portland, Ore., company. Pricing ranges from \$1,499 to \$4,999. [www.webtrends.com](http://www.webtrends.com)

### VPN Tool Upgrade

Data Fellows is set to ship F-Secure VPN-4.0, a new version of its virtual private networking software, this month. The Windows-based tool adds support for dial-up and Dynamic Host Configuration Protocol addressing with Windows 95 and NT 4.0. Security settings are centrally managed and status information is accessible with a Web browser, according to the San Jose, Calif., company. Pricing ranges from \$50 per user for a 100-user license to \$4,900 for an enterprise gateway. [www.datafellows.com](http://www.datafellows.com)

### File Sync Software

Software Pursuits Inc. has announced Synchronic Server 2.1, software for replication, synchronization and mirroring files between servers over a LAN or WAN. The new version includes the ability to automate ongoing synchronizations and run synchronizations at remote servers, according to the San Mateo, Calif., company. The software costs \$500 per Windows server. [www.softwarepursuits.com](http://www.softwarepursuits.com)

## Kelly Fights E-Mail Bugs at the Server

BY ROBERTA FUSARO

Troy, Mich.-based employment agency Kelly Services Inc. is using server-based fil-

tering technology to crush E-mail bugs — and has found some early success. Kelly has about 5,000 em-

ployees. About 60% of the company uses Lotus Notes; about 40% uses Internet mail. When Kelly adopted Lotus

Notes, many users gained their first access to external E-mail. As the system was rolled out, the number of E-mail messages grew exponentially, "which gave us greater exposure to newer strains of viruses," said

Mike Littleton, a network systems engineer and leader of Kelly Services' antivirus project — a team dedicated to tracking E-mail bugs. Kelly now transmits 500,000 to 1 million messages per month globally, he said.

Late in 1997, the company noticed it had contracted "Imposter E," a Word macro virus, and tried to fight it off desktop-by-desktop. But by July of last year, the number of alerts had increased significantly.

So Kelly adopted Trend Micro Inc.'s server-based ScanMail product. With ScanMail, desktops could be monitored from a central location and software/virus pattern updates could be done automatically. Visits to each desktop weren't necessary, support analyst Dave Pflieger said.

Kelly deployed ScanMail in the fall and had fewer virus alerts in the fourth quarter of 1998 than ever before, officials said.

Kelly considered products from Network Associates Inc. and Symantec Corp. but chose ScanMail for Lotus Notes because it fit best with the company's Notes infrastructure, said Dale Vallutti, Kelly's Notes administrator.

The server-based model lets administrators track alerts back to an individual user so they can isolate virus hot spots, Littleton said. And because Kelly can configure every workstation in one shot, that guarantees antivirus consistency, he said.

Oppenheimer Security Funds in New York is using WorldTalk Inc.'s WorldSecure Server to protect its messaging system. And Procter & Gamble Co. is using Tally Systems Inc.'s MailCheck, a probe-based E-mail management system.

That's because the threat of virus infection through E-mail is greater today than ever before, users and analysts said.

The way to defend is to deal with the points where E-mail enters the network, said Joe Judge, a consultant at PriceWaterhouseCoopers in Boston. That means applying controls at firewalls, gateways, mail stores and file and Web servers, he said. ▀

## BRIEFS

Fujitsu, Toshiba  
Team on Fast DRAM

Fujitsu Ltd. and Toshiba Corp. last week said they will jointly develop memory chips that could operate two to three times faster than today's dynamic RAM chips, which are used as the main memory in PCs. The Tokyo-based companies plan to ship samples of 64M-, 128M- and 256M-bit Fast Cycle RAM chips later this year.

SmartDB Templates  
For PeopleSoft Apps

SmartDB Corp. in Palo Alto, Calif., last week released a set of application integration templates that support PeopleSoft Inc.'s financial and human resources software.

The templates work with SmartDB's Workbench 4.1 data transformation engine. Pricing starts at \$47,500.  
[www.smartdb.com](http://www.smartdb.com)

## Motive Revamps Duet

Austin, Texas-based Motive Communications Inc. is shipping a new version of Motive Duet, its support management software aimed at helping and users solve their own computer problems.

Available now, the Motive Duet Self-Service Engine starts at \$75,000.  
[www.motive.com](http://www.motive.com)

Doc Manager  
For Exchange

Eastman Software Inc. in Billerica, Mass., is now shipping Version 1.2 of its Document Manager for Microsoft Exchange. The product includes enhanced version control, document locking and audit trails.

It costs \$149 for new users; a free license upgrade is available to users of Version 1.0.  
[www.eastmansoftware.com](http://www.eastmansoftware.com)

Windows Apps  
For Manufacturing

Danish vendor Maxisoft Software U.S. Inc. has released Windows-based manufacturing applications

aimed at machine users. Navision Manufacturing is integrated with a set of financial applications sold by the company, which has U.S. headquarters in Norcross, Ga.

Pricing starts at \$35,000.  
[www.navision.com](http://www.navision.com)

## Messaging Tool Bows

Software Technologies Corp., a Menloville, Calif., developer of application integration tools, last week announced software that combines publish-and-subscribe messaging

and multicasting capabilities. Data-Cast is aimed at users such as feeders of stock-price data to large groups of traders at once, the firm said.

Pricing ranges from \$50,000 to \$125,000.

# Hold the Phone (Line)

BY DAVID STROM

**W**IRELESS INTERNET MAIL can be a liberating experience for traveling executives. No need to plug in to a phone line. No need to mess around with your hotel's phone system. And no need to worry that you don't have the right access code, phone number or the time to search for a convenient RJ-11 phone jack when you're at an airport or on the road. But the trade-offs are cost, complexity and finding the appropriate wireless coverage area.

Of the three trade-offs, understanding the radio coverage areas and networks in place around the country is the most vexing.

Some systems don't work in every city. For example, Metricom Inc.'s service is available in three metropolitan areas, while AT&T Corp.'s isn't available in Los Angeles.

Others don't cover the far-flung suburbs yet.

Most of the major service providers have maps describing coverage on their Web sites, but actual performance can vary tremendously depending on geography, obstacles such as concrete walls and metal floors, and your own particular elevation at the time of use.

Wireless E-mail can cost at least double that of the wired version, to be sure. There is a dizzying array of plans and service options; some of which require lots of scrutiny and clarification.

Some plans charge by the minute, others by the number of characters transmitted. Still others offer unlimited pricing plans.

Wireless also is more complex than wired. You'll need to have several different pieces of hardware and software, such as a wireless modem or cell phone with a modem attachment, a cable that connects your computer to the modem

and the necessary software and configuration parameters to make it all work.

Because of its complexity, you should test it in your office carefully before hitting the road.

You'll also need a standard Post Office Protocol (POP) Internet E-mail account to use these products.

If you currently get your corporate E-mail through Lotus Development Corp. Notes or Microsoft Corp. Exchange servers, they won't work.

I tried two phone-based systems for providing wireless, Internet-based E-mail.

The phones have the advantage of being portable and relatively easy to use — and they can do double duty, taking wireless voice calls as well as data.

There are other wireless systems, including the newly announced (but not yet available) Palm VII from 3Com Corp., but the ones I reviewed are the only three available for a wide variety of computers, personal digital assistants and laptops that work across most of the country. ■

*Strom is a freelance reviewer in Port Washington, N.Y.*

## MORE ONLINE

For more wireless Internet mail buying tips, visit our Web site:  
[www.computerworld.com/news](http://www.computerworld.com/news)

## AT&T Wireless Services

AT&T PocketNet Service  
Samsung Duette Phone (\$599)

Unwired Planet Browser and Infinite Technologies Mail and News.com mail reader  
Typical monthly price: \$30, plus voice calls billed separately  
[www.attws.com/general/pocketnet](http://www.attws.com/general/pocketnet)

It looks like a cellular phone with a large, four-line display, but it actually has its own TCP/IP address and Web browser built in. I found this phone to be indispensable over the past year; I have managed to read our E-mail without having to carry a laptop around the country. The service is called AT&T PocketNet. AT&T Wireless Services sells the voice and data services, and you can buy one of two different cell phones that will work with the whole shebang. I have tried both the Samsung Duette and Mitsubishi Mobile Access phones, and prefer the former for its ease of use and four-line screen readability.

The phone connects to my standard POP E-mail account at [www.strom.com](http://www.strom.com) through the service of Infinite Technologies' Web site ([www.mallandnews.com](http://www.mallandnews.com)).

Like many others, this site allows you to read your E-mail within a Web browser and has been designed to work with the PocketNet phone. It took minutes to get it set up and working, and the instructions are very clear.

The bad news is that the service isn't available in Los Angeles or Atlanta, Ala. AT&T's pricing plan is complex in that you pay separately for voice and data calls. If you want to connect your phone to your laptop, there are additional fees and pricing plans to choose from.

## Ericsson Co.

Ericsson CF768 Cellular Phone (purchase price varies, depending on service provider)

Ericsson D127 Mobile Office Software and Infrared modem (\$279)  
Omnipoint Wireless Service (typical monthly service fee: \$45)  
<http://mobile.ericsson.com>

Another wireless option is to use cellular phones with modems. This hasn't been easy over the years because such phones require a special, expensive cable to connect it to a laptop. Also, the number of prices, plans and products is numerous.

Ericsson has tried to solve this problem with a special infrared modem about the size of a "C" battery, which snaps on to the end of many of its digital phones. The infrared modem doesn't need any cable to talk to a computer with a corresponding infrared port, such as those found on many laptops and Windows CE-based machines.

Of course, cellular phone services charge by the minute for calls. That could add up quickly — particularly if you roam outside your local area.

One solution is to use a digital carrier that doesn't charge for roaming, such as OnePoint Corp. Getting the phone, modem and computer set up took about an hour, including reading some confusing instructions in the various manuals.

This setup — unlike the AT&T phone — has the advantage of having an almost full-size QWERTY keyboard in compact managers. ■

## Metricom Inc.

Ricochet service (\$30 per month unlimited Internet access plus initial \$45 fee)  
Metricom modem: \$349  
[www.metricom.com](http://www.metricom.com)

If you live in or frequently travel to Seattle, San Francisco or Washington, you have a third choice for wireless Internet E-mail access. Called Ricochet, the service is as close to a one-stop shopping experience as you will find. You get a wireless modem from Metricom and an account. The modem attaches to your computer's serial port. The advantage is that you can use your existing PC or laptop to compose and receive E-mail, rather than using the many keyboards of the Samsung cell phone or a Windows CE-based handheld device. And you pay a single price for all the access you need, rather than trying to decode some complex billing plan — which is what's offered by most cellular phone vendors. But outside of these three areas, you have to make do with a traditional wired connection.

# Massively Parallel Processing

BY LAURA HUNT

If your company is looking for a high-speed, high-performance system that can execute complex analysis on huge amounts of data, then massively parallel processing (MPP) may be just the technology you need.

MPP involves placing up to thousands of processors in a single box. Each processor has its own stored memory. When a query is sent, software breaks it up so that each processor completes a different part of the problem, making the response time very fast (see chart).

The concept is simple. "Think of people trying to dig a 1,000-foot trench. If one guy can do 10 feet an hour, 100 guys could do 100, and 100 could do the whole thing in one hour," says Richard Winter, an analyst at Winter Corp. in Waltham, Mass.

Other multiprocessing systems include symmetrical multiprocessing (SMP), in which processors share the database and memory. SMP is good for large databases that are updated continually. Because the database is shared, it's easier to update, says Rich Prattidge, an analyst at Port Chester, N.Y.-

**DEFINITION:**  
Massively parallel processing (MPP) is used to solve large computational problems. Its architecture may comprise up to thousands of processors in one system. Each processor includes its own bus, memory, disks, copy of the operating system and applications. In MPP operation, the problem or query is broken up into separate pieces, which can be processed simultaneously.

based D.H. Brown Associates Inc.

Another form of multiprocessing is clustering technology, in which many servers are connected together (see QuickStudy, Dec. 21).

The choice between MPP, SMP and clustering technology depends on the nature of the problem being solved. If the problem can be easily partitioned or split, MPP is a good solution, Partridge says.

Many large companies, such as Fingerhut Cos. (see Q&A), Sears, Roebuck and Co., Wal-Mart Stores Inc., Citigroup Inc., MCI WorldCom Inc., Sprint Corp. and Dayton Hudson Corp., have discovered the benefits of

MPP and use it to store customer data, analyze customer behavior and segment customer categories for optimum marketing and sales activities.

Winter advises that users look at scalability requirements before implementing MPP, including how much detailed data is stored, how much of the data is used to find potential customers, how many transactions or queries are performed and how many concurrent users will be accessing the system.

"Once a database gets to a certain size, your user population suddenly gets much bigger or the level of complexity of your problem in-

creases, only MPP can help," Winter says.

One thing to keep in mind: These powerful systems don't come without a powerful price. According to Winter, a system with just a few processors or nodes can be implemented for \$400,000 or \$500,000. That would typically support a warehouse with 100G bytes to 300G bytes of data. A multinode system that can support a 1T-byte warehouse would cost a few million dollars, he says. ▶

## MORE ONLINE

For links to massively parallel processing-related vendors, consultants, research articles and books, visit our Web site: [www.computerworld.com/mpp](http://www.computerworld.com/mpp)

Randy Enslin, group manager of marketing analysis at catalog retailer Fingerhut Cos., describes the company's MPP system called Mail Stream Optimization.

**Q:** What do you use the system for?

**A:** The system allows us to look at customer history and information for 20 to 40 catalogs at a time to make sure the correct customers get the appropriate mailings.

**Q:** How does it work?

**A:** Models are built in SAS [Intellitec Inc. software] based on which customers want which products and which are most profitable.

Payment history, purchase history, mailing instructions, demographics are stored and modeled, and the SAS code individually scores each customer per catalog. Oracle/Star [software from Turco Systems Inc.] optimizes the query and searches for the best answer. The system allows us to make 100 decisions in concert, instead of 100 individual decisions. We send 7 million customer records through the process every week.

**Q:** How long did the project take to implement?

**A:** We spent three years designing, developing and testing the system. We went live in September.

**Q:** What are the benefits of the system?

**A:** The application is saving money because we don't do ineffective mailings. The system also allows us to perform more complicated analysis of our customers.

**Q:** Were there any surprises during the process?

**A:** We were surprised to find the hardware is cheaper per processor. And we were surprised at how easy it was to implement, and the training was less expensive and easier than we anticipated. ▶

## An Example of How MPP Works

Sybase has the information technology you need to bring together different information systems and computing platforms into one powerful solution. So everyone in your organization has the information they need, when and where they need it.

Our technology is used at:

- 70% of the world's top banks
- Stock markets from Tokyo to New York
- 19 of the top 25 US Life/Health Insurers

We're helping them develop applications for things such as:

- Sales Force Automation
- Global Risk Management
- Electronic Commerce/Internet

For more information about how we could put together a solution for your business, visit [www.sybase.com](http://www.sybase.com) or call 1-800-8-SYBASE (Ref. CPCW7).

IT

## BRIEFS

Internet 2  
Advances

IBM last week announced the Internet 2 Distributed Storage Infrastructure Initiative, designed to support advanced applications such as real-time broadcast and video.

The initiative, the second major piece of the next-generation Internet, is seen as vital to the Internet 2 project's goal of making collaborative research and distance learning more practical.

Profiling  
Legacy Data

Evolve Software Corp. is shipping Migration Architect 2.1, software that helps users profile legacy data before implementing enterprise resource planning or data warehousing projects.

The San Francisco company said the new version adds Windows NT support. The software costs \$290,000 for the server and \$50,000 for each concurrent user.

Linking Up  
Remote Users

WRQ Inc. has announced Relocation EnterView 2.0, Web-to-host server software that has remote users connect to legacy applications. The Java-based tool now offers IBM S/390 emulation for IBM AS/400 hosts and Hewlett-Packard Co. 750/94 as well as 750/98 emulation for HP 3000 and 9000 hosts.

The software, which costs \$255 per seat, will ship to March.

## Fax for Domino

Lotus Development Corp. has announced Fax for Domino 4.0, a server-based product that lets Lotus Notes users send and receive faxes from

within their Notes client. According to the Cambridge, Mass., vendor, Version 4.0 lets mobile users send and receive faxes from the road and prioritizes outbound faxes based on pre-defined rules. Pricing wasn't announced.

www.lotus.com

Self-Service  
Platform

Edify Corp. last week announced Electronic Workforce 6, a development and runtime platform for applications that enables customer self-service. According to the Santa Clara, Calif., company, the platform now supports Microsoft Corp.'s Component Object Model and provides connectivity to existing back-office systems.

Platform pricing begins at \$160,000.

www.edify.com

Who's  
Buying What

LEVI STRAUSS & CO. has purchased MK MANUFACTURING for its Richardson, Texas, technology center. The manufacturing resource planning software is sold by MK GROUP, which is a business unit of COMPUTER ASSOCIATES INTERNATIONAL INC.

St. Louis-based MORGAN TO CO. has purchased Palo Alto, Calif.-based ACTA TECHNOLOGY INC.'s ActaWorks SAP R/3-to-data warehouse extraction tool, which the company will use to build an ORACLE Corp. data warehouse for its business divisions.

THE LOUISIANA DEPARTMENT OF NATURAL RESOURCES last week said it is deploying a FILENET CORP.-based document management system to let state officials and employees electronically receive public-domain documents for oil and gas well permits, drilling, production and royalty statements.

FRANKLY SPEAKING/FRANK HAYES

## Turing's thumb

AROUND 1950, computer science pioneer Alan Turing came up with a simple rule of thumb for artificial intelligence. Turing suggested that if users held two conversations — one with a computer, the other with a human — and at the end couldn't pick out the computer more than 50% of the time, we'd have to conclude that the computer was intelligent. The now-famous Turing test wasn't based on complicated metrics or extensive statistical analysis, complex methodologies or weird psychobabble theories. It was a commonsense observation:

If you can't tell the processor from the person, you might as well say the computer is as intelligent as the human being.

Forty years later, we have a different problem. We're trying to decide how well our systems meet users' needs. We've got more metrics, methodologies, statistics and psychobabble than we can use.

Trouble is, our systems don't seem to be getting any more effective.

Maybe we should deep-six the fancy stuff, at least for a while. Maybe, instead, we should adopt some variations on Turing's 50% rule of thumb to put how well we're doing into perspective.

For example, are users convinced that a system is actually useful more than 50% of the time?

If not, you've got a system that simply doesn't do what it's supposed to do. Maybe you should rip it out and replace it.

Does any one employee actually use more than half the system's features? If not, you've got either bloatware or a serious lack of user training — and usually an oversupply of features.

Maybe you should trim out the unnecessary code. Or, if different feature sets are used by different groups of users, maybe what you need are several simpler versions instead of one large, complex version that will eventually become a nightmare to maintain.

Do users believe more than 50% of the system's features are useful? If they don't, they've got a worse problem than bloatware — your users have lost faith in the system's usefulness. You need to do a much better job of explaining what the system's features are and what their value is.

Do more than half of your users think the system is sufficiently responsive? If they don't, you need to tweak your networks or start beefing up your hardware — that many users can't be wrong about the meaning of "fast enough."

By now, you've probably noticed that these aren't questions you can resolve by counting bugs or monitoring network loads. To get these answers, you'll have to talk to your users.

But you shouldn't stop at questions about features and responsiveness. Find out how satisfied your users are. Does the system make their targeted task 50% easier? Does it let users perform the task 50% faster — or at least make it faster 50% of the time? Do users think the system pays for itself at least half the time?

Although users may not know what the system actually cost, if they really believe the system is returning its investment, that vote of confidence means you're doing something very right.

It means they think of the system as a valuable tool — not as deadweight slowing them down. Sure, these 50%-rules-of-thumb are unscientific. They're anecdotal, inconclusive, maybe even frivolous, compared with all those real metrics that you can gather.

But ignore these unscientific rules at your peril. They'll give you the bottom line on how your systems stand with users.

And there's nothing artificial about that sort of intelligence at all. ■

Hayes, Computerworld's staff columnist, has covered IT for 20 years and still has at least 50% of his thumbs. His e-mail address is frank\_hayes@computerworld.com.

Documents are digital. Documents are paper.

“When it comes to

**If you're far behind on year 2000, there are emergency maneuvers you can try - but they're long shots**  
By Alan Radding

**Y**EAR 2000 CRUNCH TIME has arrived. If your critical business applications aren't fixed and being put through the testing process by now, you're heading for problems. Managers hoping to win the year 2000-compliance game at the buzzer are bound to be disappointed. Even the most promising crunch-time tools and tactics are problematic at best - not the sort of thing on which anybody wants to bet their business or career.

"If companies are not well under way by now, they will probably find themselves in big trouble," says John O'Brien, consulting manager at Systems Integration Group Inc. in Houston. At this point, O'Brien's best recommendation is aggressive triage: Identify only the most critical systems and fix them as fast as possible, letting everything else slide. For example, fix your sales order entry systems so you can continue to process orders after Jan. 1, 2000. On the other hand, you can leave your decision-support applications for later - the business will survive if static historical data gets sorted improperly for a while.

In the crunch-time rush, don't forget the upside to the year 2000 problem - better systems. "I just couldn't justify rewriting all our reports until the Y2K problem," says Chuck Kemsicki, director of business management systems at the office of the chancellor of the California State University System in Seal Beach, Calif. His data mart strategy not only ensures that his users will be able to access key data, but also delivers "much better reports than the old green bar," he notes.

For those falling dangerously behind, year 2000 project managers and consultants offer up some crunch-time tactics. Be advised, however: There are no magic solutions. The following tools and tactics may prove helpful, but there are no guarantees. Every crunch time situation is different.

#### **Data Migration Tools**

Escape the year 2000 problem altogether by migrating the year 2000-compliant packaged applications. That's a favorite strategy, but you'll need some shortcuts at this late date. Borders Group Inc. in Ann Arbor, Mich., pulled off a switch to PeopleSoft Inc.

applications in just 11 months with the help of a data-migration tool from Convoy Corp., which expedited the process of extracting the data from the legacy system and transforming it into year 2000-compliant form, says John Cooper, project manager at Borders. The Convoy data-migration tool trimmed three to four months off the implementation process, he says.

Any good automated data-migration tool can speed up the task. If the organization is ready to start implementing the packaged application today and is willing to accept the package's default configurations, it might pull off a migration in the months remaining. But it will be close.

For anyone else, it's already too late.

#### **Escape to a Hot Site**

If your hardware and communications infrastructure rather than your application is creating your year 2000 problem, you can run to a "hot site," where disaster-recovery vendors such as Comdisco Inc. in Rosemont, Ill., offer year 2000-compliant platforms. For most companies, however, the biggest year 2000 problems are buried in the application logic and data, not the hardware or communications infrastructure. "If the code won't work at home, it won't here," warns Allan Graham, senior vice president at Comdisco.

#### **Speed Up Testing**

The actual year 2000 code fix is relatively simple and straightforward. It's the testing that's arduous and time-consuming. Preparing and aging the data for test purposes represents a substantial testing bottleneck. Automated data-aging tools can speed the process and lop months of work off the task, but such tools vary widely in performance, consistency and reliability. After testing four automated aging tools, Sage Consulting LLC, a year 2000 consulting firm based in Princeton, N.J., turned to Princeton Softech Inc.'s Ager 2000, which Sage said did best in terms of consistency of results. "With Ager 2000, it takes one-tenth the time to age mainframe data compared to writing it yourself in Cobol," reports Ed Soesman, a consultant at Sage.

*Continued on page 78*

**UP A CREEK?**  
**Here's a**

# Paddle

Continued from page 76

There are several data-aging tools available. For example, United Stationers Supply Co. in Des Plaines, Ill., uses TransCentury File Age and TransCentury Date Simulator from Platinum Technology Inc. to prepare data for year 2000 testing. The company completed its year 2000 code corrections around Thanksgiving and is devoting the time remaining to testing the resulting programs and contingency planning, says Bob Niedzwiecki, year 2000 project director. "We're examining our processing schedule for the last business day of 1999 to minimize the risk of any jobs running at midnight."

#### Testing Alternatives

Complete testing is a big, time-consuming job. With so little time remaining, many companies need to shortcut testing. Those desperate for quick-and-dirty testing can try a dipstick test, which is a way to avoid comprehensive testing, explains year 2000 consultant Gregory Morris, CEO of Flat River Technologies LLC in Mount Pleasant, Mich.

Dipstick testing involves using two automated testing tools to review a sample of fixed code. If the sample code tests well with both tools, you can assume the code is pretty solid. Morris uses testing tools from Platinum Technology and Micro Focus Inc. for Cobol code testing. Any two testing tools will do the job, however.

Dipstick testing can work in some cases, but you're taking a real chance, Soezman warns. In situations where there are extensive dependencies among many pieces of code, this approach becomes risky because you're not testing the full code with all of its dependencies.

encies. It also requires buying, implementing and learning two tools so you can get, in effect, two views of the same code. That also takes precious time.

#### Independent Verification and Validation

Independent verification and validation (IV&V) involves using assessment tools to do essentially the same thing as dipstick testing, but IV&V takes place

**We're examining our processing schedule for the last business day of 1999 to minimize the risk of any jobs running at midnight.**

BOB NIEDZWIECKI, YEAR 2000 PROJECT DIRECTOR,  
UNITED STATIONERS SUPPLY CO.

during the assessment phase, when you're scanning code to determine the likelihood of year 2000 problems. If you haven't even started code assessment, a key triage step, IV&V can speed you along.

"It is really like getting a second opinion on your code, and it can save a lot of time," says Steve Prycki, managing director of year 2000 services at DMR Consulting Group Inc. in Edison, N.J. IV&V saves time

## FAST FACTS

### Y2K Site-Seeing

Here's a sampling of year 2000 Web sites that could prove useful to information technology managers - along with comments on how useful we thought they were:

**Year 2000 expert Peter de Jager has put together quite an informational resource for IT folks.** You'll find things such as links to press kits, vendors and products, user groups, conferences, job opportunities (a limited list), year 2000 stocks, and hardware and software compliance information. It's well-organized, and we had no trouble linking to any of the sites.  
[www.year2000.com](http://www.year2000.com)

**Our very own year 2000 resource offers links to year 2000 sites.** Computerworld/articles dating back to early 1997, podcasts and books, reports, vertical industry information, product sampling, legal guidelines and user groups. We also have an ongoing feature, called Year 2000 Chronicles, in which we track six companies as they deal with the political, staffing and technical issues that surround year 2000.  
[www.computerworld.com](http://www.computerworld.com)

**Reporting the results of a survey conducted in December, Cap Gemini America LLC states,** "With one year remaining until the new millennium... a majority of America's

largest corporations have already experienced Year 2000-related failures. Nearly all of the companies surveyed - 98% - expect more such failures in 1999." The site also offers other year 2000 information.  
[www.usaa.cagymini.com](http://www.usaa.cagymini.com)

**The primary information offerings here include listings of and links to Ed Youdon's publications,** including articles and books such as *Y2K for Fun and Profit* and *Time Bomb 2000*. But Youdon's site also offers the most comprehensive list of related books and articles that we've come across in site checks. One of the sites, the Y2000 Personal Preparation site ([www.readyforY2K.com](http://www.readyforY2K.com)), includes articles, checklists and links to various vendors of books, tools and other material.  
[www.y2000.com](http://www.y2000.com)

**This tests itself as a site that offers quick links and informational databases,** along with evaluation of year 2000 software and hardware. But we found it a bit confusing.  
[www.Y2Klinks.com](http://www.Y2Klinks.com)

**This site calls itself the official site of the President's Council on Year 2000 Conversion.** Here you'll get updates on the council's activities, information on the economic impact of year 2000, various articles on compliance, consumer links and information about Social Secu-

ry issues. It's easy to navigate, but some links lead only to telephone hot lines, which then lead you to frustrating "press 1 for this" messages.  
[www.Y2K.gov](http://www.Y2K.gov)

**The founders of this site are technology lawyers.** They offer information about legal issues, and they have opened up the site to lead visitors to other sources of information, such as year 2000-related articles, vendors and conferences. A disclaimer warns that the statements and links in the vendor listing "are paid advertisements."  
[www.Y2K.com](http://www.Y2K.com)

**This site was created by a former CEO of United Press International.** It appears to be geared to the general public and offers a "Y2K-today Resource Guide" that gives an overview of what the problem is, what's being done about it, and how your community and business can prepare. The site is very well-organized, easy to navigate and interesting. It tracks year 2000 articles by industry and even has its own radio program. One of the links takes you to the Cessario Project, which is run by a nonprofit group that discusses community preparedness.  
[www.Y2Ktoday.com](http://www.Y2Ktoday.com)

**The Information Technology Association of America's (ITAA) Web site provides information about the IT industry, associa-**

tion programs, publications, meetings, seminars and more. It also offers links to an extensive year 2000 resource page that provides a directory of vendors (CS) are listed, but they aren't organized by groupings, links to surveys, ITAA books and publications, information about a year 2000 task force consisting of computer software and services vendors and the "Y2K Outlook Newsletter," which is available by subscription.  
[www.itaa.org/year2000.htm](http://www.itaa.org/year2000.htm)

**Gartner Group Inc.'s package of year 2000 information features a very interesting report geared to real people.** That's right - how is all of this going to affect *us*, not just how your company is going to beat the deadline. The report, "Year 2000 Risk Assessment and Planning for Individuals," provides lists of year 2000 risks for individuals, problems, along with suggested actions. The bottom line: Prepare for short-term, localized failures of services and infrastructure rather than an apocalypse. Go to "Hot Content" to find this report.  
[www.gartner.com](http://www.gartner.com)

**This site, hosted by Electronic Systems Center and The Mitre Corp., sets itself apart from other useful sites by identifying potential year 2000 problem dates (such as the leap year) and offering steps to correct them. It also offers extensive links to other sites.**  
[www.mitre.org/research/y2k](http://www.mitre.org/research/y2k)

because it can help you rule out code that's unlikely to cause problems, allowing you to concentrate efforts on known problem code in the remaining time. Of course, you still must fix code that shows up badly in the dual assessment. Also, the results aren't foolproof — bad code can slip through.

Most leading assessment and testing tool vendors offer JIV&V products. However, the tools were intended not to be a shortcut for the initial code assessment process but a final check once all the fixes were completed and tested. "JIV&V is really part of integration-proofing, the final step in the V2K process," Morris says.

#### Ensuring Access to Key Data

If there's no way to save your applications, you at least can ensure continued access to critical data while programmers madly scramble to fix the code — at least that's the logic behind the data mart strategy promoted by Brio Technology Inc. The plan calls for moving critical data into a year 2000-compliant database, such as an Oracle Corp. product. In the data-transfer process, automated migration tools easily can expand two-digit dates to four digits.

Then, by using whatever year 2000-compliant front-end tool the organization prefers, end users can continue to access critical data — even if the usual applications and mainframe data reports are experiencing problems.

The California State University System adopted that approach for its financial reporting systems, which serve 23 college campuses. It built a 12C-to-4C data mart on an Oracle database and adopted Brio tools for front-end access instead of rewriting 400

to 500 non-year 2000-compliant mainframe reporting programs, Kensiacki says.

Kensiacki installed an Oracle database on the system-wide extranet. The legacy data automatically is converted to the four-digit date format as it's loaded into Oracle. Kensiacki's team quickly set up reports in Brio, and end users create their own reports, further speeding the process. This approach freed Kensiacki's programmers to go back to work on the mainframe application and date logic. "If we had to do it all on the mainframe, we'd still be at it," he says.

Although the data mart approach — using Brio or other front-end data access tools such as those from Cognos Inc. and Business Objects S.A. — sounds attractive, it has its limitations. First, it solves only the reporting problem — it does nothing about updates and transactions. For year 2000 purposes, it buys you only as much time as you need to function without processing new transactions, although a larger benefit in terms of better reporting transcends the year 2000 problem.

Second, setting up a data mart isn't trivial. "This is a smart tactic if you can do it, but it is really for the chosen few," says Russ Kelly, a year 2000 consultant in Seneca, S.C. Data marts, he points out, are neither inexpensive nor easy to build. If you're starting from scratch, you need to buy and install the database, data extraction and transfer tools and the front-end tool. You will have to determine if the benefits are worth diverting money and time from your primary year 2000 repair effort.

With year 2000-compliant PCs available for less than \$1,000, it makes sense to replace problem PCs. However, "we have clients with older PCs that they

just can't replace due to the cost involved," says Jason Mitchell, a senior systems engineer at Kiefer Conforti and Co., an accounting and consulting firm in St. Louis.

To solve the problem of old PCs, Mitchell recommends PCFix 2000 from The About Time Group in Atlanta. Once installed, the tool marks any year 2000 problems with the hardware and BIOS every time the machine is booted.

#### Memory Hogs

There are numerous tools that fix PCs by making year 2000 problems in the hardware or BIOS, but many of the tools are based on terminate-and-stay-resident (TSR) programs and thus consume memory, which is in short supply on the older PCs most likely to need this type of fix.

PCFix 2000, Mitchell reports, doesn't consume system resources the way TSR-based fixes do. Mitchell says the network-downloadable PCFix allowed him to make a 30-user LAN year 2000-compliant in two hours. The tool doesn't do anything with PC applications or data that may suffer year 2000 glitches, and isn't recommended as a long-term solution. "But when you're under budget and time constraints, it really works," Mitchell says.

There also are desktop utilities that fix PCs, but they typically have to be implemented one PC at a time. If you're looking at a few thousand — or even a few hundred — legacy PCs in need of a fix, you have a lot of work to do in the short time ahead. ■

*Rudolfing is a technology writer in Newton, Mass. He can be reached at rudolfing@mediasone.net.*

## Report Excerpts

#### ■ Gartner Group

##### "Year 2000 Risk Assessment and Planning for Individuals" (Oct. 28, 1998)

Individuals in Australia, Canada, the Netherlands, Scandinavia, the U.K. and the U.S. will have some disruptions, inconveniences and discontinuities during the first week of January 2000. The biggest risk is from failures and outages of telephone and power service, but the rest should be manageable. Countries in Asia and Latin America and emerging countries will have potentially larger disruptions because businesses and governments in those areas are behind in fixing critical functions.

The largest enterprises — banks, retailers, distributors and manufacturers — in general will be the most prepared and have the lowest risk factors. The same is true for most large multinational enterprises. Most of those companies started to prepare early and have had the resources to at least fix their most important systems. Failure of critical government systems continues to pose the greatest threat.

Individuals should make contingency plans based on the risks in their countries. Travel anywhere in the world in January 2000 should be deferred if possible. The progress by banks and investment companies in solving year 2000 problems should be monitored. Gartner Group

doesn't recommend liquidating assets or withdrawing funds from banks.

#### A key risk for individuals:

Being employed by an enterprise that, because of poor year 2000 preparation, suffers significant damage (such as business interruption or legal damages) that jeopardizes future employment.

#### Big up, small:

Small enterprises are further behind than medium and large companies. Individuals should maintain awareness of the status of their employers' year 2000 compliance status.

#### Heads up:

Be extra careful about scams and unqualified advice. Be aware that broadcast news and the business press may have very pessimistic outlooks because of information circulated by those with vested interests — that is, year 2000 service and software vendors, private consultants and consulting companies.

#### ■ Cap Gemini

##### December 1998 report on Year 2000-Related Computer Failures

The survey shows that a majority of America's largest corporations already have experienced year 2000-related failures. Nearly all the companies surveyed (98%) expect more such failures this year. More than half the organizations (74%) expected that more than half of their systems would be tested and completed by Jan. 1, 1999.

Personal Year 2000 Risk Assessment			
Gartner Group says actual failures will be less severe than most individuals fear			
CARRY ON! CARRY ON! CARRY ON! CARRY ON!			
Telephone	0.5	Cellular Backup	
Credit cards	1	Have cash on hand	
Health insurance	1	Copy, carry card	
Oil delivery for heat	1	Fill tank Dec. 99	
Water	1	Shut taps	
Security systems	1	Check compliance	
Automobile	3	Fill tank Dec. 99	
Grocery market	3	Stock up Dec. 99	
Pharmacy	3	Refill Rx Dec. 99	
Payroll check	5	Have two weeks' pay	

However, 92% reported that missed deadlines in their year 2000 plans are increasing, up from 84% in July 1998.

The number of companies that are very likely, or potentially likely, to stop doing business with noncompliant suppliers rose to 65%, up from 60% in the third quarter of 1998.

■ Cutter Information Corp.  
"IT Metrics Strategist" newsletter, edited and survey data by Howard Rubin

Actual year 2000 spending is far lower than budget estimates. Most companies estimated they would spend 20% to 30% of their IT budgets on year 2000, but U.S. figures indicate the actual level is about 8% to 9%.

Contingency planning is now under way at 90% of these organizations. Surveyed — up from 72% in June 1998 and only 34% in March 1995.

The plans are being developed by existing continuity teams in 20% of cases; by year 2000 teams in 35% of cases; and by joint teams in 45% of cases.

Most of this work (60%) focuses on prevention of disruption. 30% focuses on mitigating problems once they occur, and 10% focuses on both approaches.

# COMPUTERWORLD MAGAZINE FOR IT LEADERS

From New York to Silicon Valley, Tokyo to London, and points between, nobody covers technology like *Computerworld*. We deliver the leaders of the IT economy—the men and women who bet their careers and the success of their companies on the IT choices they make. They need the right news, right away, on what works, what doesn't, and why.

Over twelve million of them find it in *Computerworld* every week.

Our reputation for quality is second to none: four times as many editorial awards as our two closest competitors combined, and more business press mentions than any other enterprise weekly. Which just may qualify *Computerworld* as the most authoritative advocate for IT Leaders putting technology to work building greater business value.

Awards from: Academy of Web Design; American Society of Business Press Editors (ASBPE); Computer Press Awards (CPA); Folio; Public Relations Society of America (PRSA); Editor & Publisher Magazine; and the Western Publications Association. Press mentions: *Los Angeles Times*, *Fortune*, *NY Times*, *Wall St. Journal* 12/1/96 to 12/1/98.

# Nothing Could Be Finer...

*North Carolina IT managers are upping compensation and hiring whole hog*

BY DEBORAH RADCLIFF

**K**LITH WOOD went back to school and snagged a \$35,000 help desk position at one of the largest area law firms after only three semesters at Forsythe Technical Community College in Winston-Salem, N.C.

Project manager John Manderewicz, relocating from Florida, entertained four offers before taking a job at Piedmont Natural Gas Co. in Charlotte, N.C. Now his secretaries for project managers take six to nine months.

Welcome to North Carolina, a state so hungry for IT workers that hiring bonuses are the rule rather than the exception.

It's a state that falls in the middle of one of two of the most aggressive hiring regions for this year, according to Computerworld's Jobs Forecast '99. According to the Bureau of Labor Statistics, North Carolina's technical job openings will increase by 200% to 500% from 1990 to 2000.

Move over, textile and tobacco companies — the high-tech, medical research, financial and insurance industries are taking root. For those who don't mind an occasional hurricane or

smelly pig farms (North Carolina is the state with the second-largest number of hogs, according to *The News & Observer* newspaper in Raleigh), this renaissance spells opportunity for information technology workers at all levels.

Entry-level work can pull in wages comparable to the median income of, say, Boston, where the cost of living is nearly 30% higher than in North Carolina. Seasoned project managers can write their own tickets. Networking specialists, mid-level and main-frame developers, Microsoft Certified Engineers (MSE) and specialists certified in Oracle Corp., PeopleSoft Inc. and Cisco Systems Inc. technologies also can expect premiums.

## Research Triangle: Raleigh, Durham and Chapel Hill

The key to North Carolina's evolving economy is efficiency. Hence, Blue Cross/Blue Shield of North Carolina in Durham is migrating to an AS/400 system to support a new, streamlined product line. "This means hiring for a whole new set of skills," says Norm Phelps, senior vice president of operations/data center services.

Last year alone, the company strug-

gled to fill 150 openings, mostly main-frame, LAN and WAN developers and hardware specialists, along with a number of MSCEs. "Depending on a person's skills and how long they've been working on mainframes, they can demand [\$70,000] to [\$80,000] for jobs in this region," Phelps says.

## Charlotte

Piedmont Natural Gas is streamlining operations by moving its financial and human resources operations to a PeopleSoft system. W. R. "Dick" Pritchard, vice president of information services, is trying to fill 20 positions in his 100-person IT shop. Specifically, he needs Oracle database administrators and Windows NT, Unix and PeopleSoft specialists.

Piedmont also has revamped salaries to reflect the growing economy. "In the past 12 months, we've changed our compensation programs substantially. We're offering variable pay components and pay based on performance along with bonuses for successful completion of projects," Pritchard says.

## Winston-Salem

Inmar Enterprises Inc., a store coupon and expired-product clearinghouse in Winston-Salem, is betting on its new Citrix Systems Inc. thin-client terminal servers and Web-based computing to improve efficiency.

Gary Skot, director of IT at Inmar, says his organization has learned so much about thin-client development that it just opened a division to develop such networks for other firms.

But when Inmar tried to partner with Microsoft Corp. for its SQL Server 7.0 work, Skot ran into a problem: A three-month search failed to find the two MSCEs Microsoft required. So he's sending staffers to school, with Inmar footing the bill.

When asked what advice they would offer job hunters, IT managers from all regions chimed, "Come here."

## IT Top 10 in N.C.

IT managers say they will be hiring for these job titles most often this year

1. Project manager
2. Senior programmer/analyst
3. Senior systems analyst
4. Network administrator
5. PC technical support specialist
6. Programmer/analyst
7. Webmaster/Web designer
8. LAN manager
9. Technical support manager
10. Computer operator

Manderewicz recommends seeking jobs in high-growth areas and staying in a vertical industry you have worked in before. If you're unsure about laying down roots, Piedmont's Pritchard suggests testing the area as a contractor.

Interestingly, none of these managers breathed a word about the pig problem, news of which earned *The News & Observer* a Pulitzer Prize three years ago. ▀

## Can you be ingenious on a regular basis?

### Explore Professional Opportunities In Technology

You've always had that rare talent. While your friends scratched their heads, your mind grabbed the pieces, Assembled them, And came up with the brilliant solution. Today, your technology insights could have a profound impact on the way world-class organizations do business.

As a leading management and technology consulting organization, Andersen Consulting works with clients who are constantly seeking

ways to operate and compete more successfully. Exercising your technical fluency and creativity, you'll build the technological foundations that help organizations align strategy with people, process and technology—a holistic approach that transforms visionary ideas into successful, real-world solutions.

It's an environment to learn in, grow, and push the envelope. There's a wide range of opportunities, from

deepening skills in tools like JAVA and developing Enterprise Resource Planning solutions, to taking on leadership responsibilities. To explore opportunities, visit our Web site at [www.ac.com/careers/explore](http://www.ac.com/careers/explore).

Bring your technology talents to us.

## Monthly Employment Report

As an IT professional, you thrive on the challenge of using your analytical skills to identify problems and implement solutions. You're ready to make an impact. If PRT County Memorial Hospital, part of University Health Systems of Eastern Carolina, we've got the ideal program for your successful future. With a new expansion underway integrating our system of state-of-the-art facilities, enters all the exciting high-tech opportunities that go along with it. And when you consider the impact you'll have on the technical infrastructure of one of the region's most innovative healthcare providers, the \$3,000 sign-on bonus is merely icing on the cake. Join us.

### Up to \$5,000 Sign-On Bonus!

If you have skills in any of these applications, we want to have you join!

- General and Financial application selection, development, implementation, and support
- IBM/AS/400 development and support
- Web development and reporting (Java, Microsoft Access, Visual Basic, Crystal)
- Windows NT, Novell Netware, and Groupwise Administration
- WAN/LAN management and performance activities
- Experience with TSPW and UPS
- Interface development and support experience with knowledge of HL7, UNIX, SMS, Openlink, or SFL Database

We also have opportunities available for:

### Systems Programmers

- Responsible for mainframe system software on IBM (S/PS/000)
- OS/390, IBCS, VTAM, and MCF support
- Third party software installation and support (e.g. Bunde and Balbridge products)
- Experience with installation and support of DB2, TSPW, Microsoft links, and networking

We offer our valued team competitive salaries, comprehensive benefits and career advancement opportunities for professional growth. All interested candidates should submit resume and a list of references to our forwarding resumes to: Employment Office, PRT County Memorial Hospital, P.O. Box 4428, Greenville, NC 27835-6428, FAX: (252) 936-5235. Please apply via fax, or E-mail: [hr@prthospital.com](mailto:hr@prthospital.com). We are an Equal Opportunity Employer dedicated to diversity in all that we do.

## Technical Recruiting & Retention Conference

*Desert Springs Marriott  
Palm Desert, California*

Connect with experts and peers in Palm Desert, California, this June at Computerworld's eighth annual Technical Recruiting & Retention Conference. That's where over 550 corporate technical recruiters from across the nation will discuss their challenges, issues and successes in specially designed workshops, interactive discussions, breakouts and networking events. When you attend, you'll benefit from a complete schedule of topics addressing a wide range of recruiting issues. What's more, at this event's exhibit area, you'll learn about contemporary products and services designed to maximize recruiting efficiency.

### Keynote Presentations

#### **I.T. Recruiting & Retention**

**Barb Cole-Gomolski**

Computerworld Reporter/Careers & Labor Issues

Covering one of the hottest topics in I.T., Barb will give up-to-the-minute insight on how companies are dealing with I.T. recruiting and retention.

#### **Intelligent Risking**

**Brian O'Malley**

Everest & Africa Adventurer

**Barbara Stoker**

Business Consultant & Technical Rock Climber

Set your path. Find your courage. Embrace your adventure. Intelligent Risking allows you to pause and look at the Invisible Rocks, the risks you aren't taking in your life. This session is a powerful combination of "The How To" with "The What To".

### Special Events & Features

#### **Town Hall Forum on Compensation Issues**

This popular session has been designed to provide an open forum for discussion of compensation issues. It's an opportunity to learn from your peers and a place to share best practices.

#### **Internet Recruiting Case Study**

Work through the latest in internet options with this special team building exercise.

#### **Meet Formally and Informally with Peers in the Conference Lounge**

For the first time, we're making a new conference lounge available for formal and informal meetings with your peers. Open during all conference hours, it's a great place to take a break and catch up with other recruiting and retention professionals.

*June 6-9, 1999*

### Selected Sessions & Speakers

#### **Conducting a Technical Screen**

**Susan Hodges**

SEMCO Enterprises

#### **The Recruiter's Role in Retaining Talent**

**Barbara Mitchell**

The Millenium Group

#### **Perception is Not Just Everything, it's Everywhere**

**Frank Cutitta**

International Data Group

#### **Immigration Update**

**Harry Joe, Esq.**

Jenkins & Gilchrist

#### **I.T. Recruitment & Retention Metrics Survey & Results**

**David Weldon**

## BROKERS COPE WITH OUTAGES

## Online delays can be costly for buyers, sellers

**A** SPATE OF BAD PUBLICITY has dragged down the stocks of several online brokerages. ETrade Group Inc. (Nasdaq:ETGR) suffered some embarrassment earlier this month when its online trading system was inaccessible to traders because of problems with a new software installation. Outrages also hit the Web sites of The Charles Schwab Corp. (NYSE:SCH), Ameritrade Inc. (Nasdaq:AMTD) and privately held Dadek Online Brokerage Services Corp. Investors have since battered ETrade's

stock, sending it down from a peak of 62-7/16 on Feb. 1 to 48-1/8 on Feb. 11.

Ameritrade's stock was on fire during January, zooming from 31-1/2 to open the year to a high of 128-9/16 on Feb. 3. But it had fallen back to 98-1/2 by Feb. 11. Schwab, which has both Web-based and traditional customers, dipped from a peak close of 70-5/16 on Jan. 29 to 66-13/16 on Feb. 11.

Michael Chung, an analyst at Williams Capital Group in New York, says the stocks had been overvalued, with the run-up driven by day traders. But he says he's bullish on the brokers for the long term because they have tremendous growth potential. Chung calls the downturn a "very healthy correction" and a good buying opportunity.

Chung predicts a consolidation of online brokers within the next few years, with today's crowded field of more than 20 brokers narrowing to three or four major players. He says Schwab and ETrade are positioned to seize two of those slots; the others are up for grabs among players that include Ameritrade, Discover Brokerage Direct Inc., Datek and DJ Direct Inc., a subsidiary of Donaldson Lufkin & Jenrette Inc. (NYSE:DLJ).

David Baltaxe, an analyst at Current Analysis Inc. in Sterling, Va., says reliability is more important in stock trading than in most online retail ventures because delays aren't just an inconvenience — they can cost the customer real money. "If you are not serving the customer to the degree the customer expects, the customer will go elsewhere," Baltaxe says.

Chung says the service problems should subside as the brokerages' systems mature and Internet bandwidth increases. — *Internet Solutions*

## INSIDE LINES

### NOT DEAD YET

When Compaq Computer bought Digital Equipment, skeptical users fretted that Compaq would cut off life support for Digital's venerable VAX/VMS line.

Those fears were fueled again when DataLogics, a small vendor of publishing software, put a white paper on its Web site stating matter-of-factly that Compaq would pull all VAX support after Dec. 31, 1999. Not true, insisted Compaq, which also must have convinced DataLogics. By last week, the offending statement was gone.

### 8000 DODGYY

More Microsoft courtroom troubles. Last week, the company settled with small Scottish developer Inner Workings, which sued Microsoft for using a yellow dog named Rocky as an animated assistant in the forthcoming Office 2000. Inner Workings has used its own yellow dog, Lemon Dog, in children's software for years and had even shown the character to Microsoft executives at European trade shows. Under the settlement, Rocky will still appear in Office 2000, but not on any packaging.

### WHAT'S THE BUZZ?

New horizons in buzzword appreciation: From systems integrator Cambridge Technology Partners, **KIP**, for "reintegrated resource planning," a successor to enterprise resource planning. From call center vendor Wireless Systems, **BDR**, for "business-driven recording" of customer calls.

### RUMOR MILL

IBM and Compaq are expected to announce support for Linux on March 1, the first day of the Linux World Conference and Expo in San Jose, Calif. . . . Office outsourcing: Critical Path will announce a pact this week with Sprint Corp. to bundle its E-mail services with Sprint's data services. . . . Microsoft is expected to ship at least one more service pack for Windows NT 4.0 some time before January.

### OVERHEARD

Gartner Group analyst Ken Buley, on the plethora of wireless data services announcements by Cisco, Microsoft and

other vendors last week. "These companies all want to be the AOL of wireless." Mark Yarik, the produce store owner who led (and later settled) the

first year 2000 lawsuit, testifying before the Senate Commerce Committee. "One thing I know is that the so-called Y2K problem is not a Silicon Valley problem. It's a Warren, Mich., problem."

### ON INTERNET TIME

Time capsules just don't last as long as they used to. MIT's Sloan School is installing an "Internet time capsule" in its new Web site to preserve a slice of today's Web for future generations. Predictions by Bill Gates and Martha Stewart are encrypted and won't be revealed until the capsule is "opened" in the far distant future of. . . well,

2004. But heck, news editor Patricia Keefe can't even wait that long for your news tips and tidbits. E-mail her at patricia.keefe@computerworld.com, or call (508) 820-8183.

## This Monitor Fits on a Dime

THE MICRODISPLAY could be used on wearable computers, DVD players, digital cameras, camcorders, wireless phones and other display-challenged products.

IF THE WAVE of the future is ever-smaller personal computing devices, what about the monitor? Most microdisplays require sacrificing image quality in favor of portability and extended battery life. But Colorado MicroDisplay Inc. in Boulder, Colo., claims to have licked those problems with its full-color, flicker-free, full-motion video display, which measures just .47 in. (diagonal) yet features a resolution of 800 by 600 pixels and low power consumption. The microdisplay can be mounted on a headset for wearable computers.

## The 5th Wave

"You know, it's dawned on me last night why we aren't getting any hits on our Web site."

**We're helping our clients with the millennium problem. Now that's really working against the clock.**

Great ideas don't always come between the hours of nine to five. Especially for situations as far reaching as the Year 2000 problem. So even when we're not at work, we're working on it. And coming up with solutions, like bringing Australia's major banks together to help address the kind of problem that only comes along every thousand years. We're helping our clients work together and prepare for potential problems no one has had to face before. [www.unisys.com](http://www.unisys.com)
